

CONTENTS

INTRODUCTION	1
References	4

CHAPTER I

ASYMPTOTIC SERIES

1.1. <i>O</i> -symbols	5
1.2. Asymptotic sequences	8
1.3. Asymptotic expansions	11
1.4. Linear operations with asymptotic expansions	14
1.5. Other operations with asymptotic expansions	17
1.6. Asymptotic power series	20
1.7. Summation of asymptotic series	22
References	25

CHAPTER II

INTEGRALS

2.1. Integration by parts	26
2.2. Laplace integrals	29
2.3. Critical points	34
2.4. Laplace's method	36
2.5. The method of steepest descents	39
2.6. Airy's integral	41
2.7. Further examples	44
2.8. Fourier integrals	46
2.9. The method of stationary phase	51
References	57

CHAPTER III
SINGULARITIES OF DIFFERENTIAL EQUATIONS

3.1.	Classification of singularities	58
3.2.	Normal solutions.	61
3.3.	The integral equation and its solution	64
3.4.	Asymptotic expansions of the solutions	69
3.5.	Complex variable. Stokes' phenomenon	72
3.6.	Bessel functions of order zero	73
	References	77

CHAPTER IV
DIFFERENTIAL EQUATIONS WITH A LARGE PARAMETER

4.1.	Liouville's problem	78
4.2.	Formal solutions.	80
4.3.	Asymptotic solutions	83
4.4.	Application to Bessel functions	85
4.5.	Transition points	91
4.6.	Airy functions.	94
4.7.	Asymptotic solutions valid in the transition region . . .	98
4.8.	Uniform asymptotic representations of Bessel functions.	104
	References	108
