Preface

Foreword

Chapter 1—THE BASIC HYPERGEOMETRIC SERIES

1.1	Introduction	13
1.2	Basic Hypergeometric Functions	15
1.3	Notation	18
1.4	Basic Analogues of the Various Summation Theorems	24
1.5	The Numerical Evaluation of q -Hypergeometric Functions	32

Chapter 2—BASIC DIFFERENTIATION AND INTEGRATION: FUNCTIONAL EQUATIONS

2.1	A q -Analogue of Differentiation and Integration	37
2.2	Simple q -Differentiation and q -Integration Formulae	39
2.3	Some Results on the Basic Differentiation and Basic Integration of Series	44
2.4	q -Differential Properties of the Basic Hypergeometric Functions	48
2.5	q -Integral Representations of Basic Hypergeometric Functions	51
2.6	The Numerical Evaluation of Basic Integrals	54
2.7	Basic Contour Integrals	56
2.8	Generalisations	59
2.9	Slater's General Basic Integral Theorem	60
2.10	q -Differential Equations	62
2.11	The Generalised q -Hypergeometric Equation	64
2.12	The Heine Equation	65
2.13	The Solutions of $[\delta+k;q]y = V(x)$	70
2.14	A Basic Analogue of the Bessel Equation	70

Chapter 3–TRANSFORMATIONS AND IDENTITIES

3.1	A Basic Analogue of a Transformation due to Slater	75
3.2	A Transformation involving a ${}_3\Phi_1$ Series	78
3.3	Slater's General Transformation	79
3.4	q -Saalschütz Transform	82
3.5	A Basic Well-poised Transform	84
3.6	Some Classical Identities	84
3.7	Basic Quadratic Transformations	87
3.8	Bilateral Series	91
3.9	Terminating Nearly-poised Basic Bilateral Series	93
3.10	A General Transformation of Nearly-poised Series	95
3.11	Further Identities	96
3.12	A Generalisation of the Rogers-Ramanujan Identities of Odd Moduli	99
3.13	Identities of Rogers-Ramanujan Type deduced from other Summation Theorems	103
3.14	Identities of Rogers-Ramanujan Type related to the Moduli 16, 24, 56, 40 and 48	108
3.15	Continued Fractions of Rogers-Ramanujan Type	114

Chapter 4–BASIC ANALOGUES OF CERTAIN CLASSICAL FUNCTIONS

4.1	The Classical Special Functions	120
4.2	The Basic Binomial Series	120
4.3	A Basic Analogue of Taylor's Theorem	123
4.4	Aq -Generalisation of Abel's Series	125
4.5	q -Exponential Functions	126
4.6	Basic Analogues of the Circular Functions	129
4.7	A Basic Bessel Function	134
4.8	The Complete Solution of the Functional Equation of $J_n(q;x)$	138
4.9	A q -Extension of Lommel's Product	140
4.10	Further Results	141
4.11	A Basic Analogue of Neumann's Expansion	145
4.12	A Generating Function of the Basic Bessel Coefficients	147
4.13	An Extension of the Legendre Function	148
4.14	A Basic Analogue of the Associated Legendre Function	153
4.15	A Basic Analogue of $Q_n^m(x)$	155
4.16	A Transformation of Heine's Series	156

Chapter 5–A BASIC STRUM-LIOUVILLE SYSTEM: BASIC ORTHOGONAL FUNCTIONS

5.1	A Basic Strum-Liouville System	164
5.2	Basic Circular Functions	169
5.3	A Basic Bessel-Clifford Equation	172
5.4	A Basic Bessel Equation	180

5.5	A Basic Analogue of the Generalised Laguerre Equation	187
5.6	A Basic Hermite Equation	194
5.7	A Basic Analogue of the Legendre Equation	199
5.8	A Basic Analogue of the Asymmetrical Jacobi Equation	202
5.9	A Basic Analogue of the Gegenbauer Equation	207
5.10	q -Ultraspherical Polynomials	208
5.11	The q -Lommel Polynomials	212
5.12	The q -Bessel Polynomials	214

Chapter 6—APPLICATIONS IN NUMBER THEORY AND COMBINATORIAL ANALYSIS

6.1	Introduction: Riemann's Zeta Function: The Fundamental Theorem of Arithmetic	216
6.2	Generating functions of Certain Arithmetic Functions	217
6.3	The Enumeration of $p(n)$	220
6.4	A Further Use of the Auxiliary Parameter	225
6.5	Jacobi's Triple Product Identity	227
6.6	The Congruence Properties of the Unrestricted Partition Function	231
6.7	Combinatorial Interpretation of the Rogers-Ramanujan Identities	233
6.8	Bibasic Identities due to Agarwal and Andrews	235
6.9	Certain Partition Identities	240
6.10	A Generalisation of the Rogers-Ramanujan Identities and Durfee Dissection	243
6.11	A Combinatorial Interpretation of an Identity of Ramanujan	248
6.12	An Analytical Approach to Sylvester's Theorem	250

Chapter 7—APPLICATIONS IN PHYSICS AND OTHER FIELDS

7.1	The Free Vibrations of a Lump-loaded Chain	256
7.2	The Hard Hexagon Model in Systems of Rigid Molecules	259
7.3	The Number of Subspaces in a Vector Space	262
7.4	Lie Theory of q -Differential Equations	265
7.5	The Elliptic Theta Functions	270
7.6	The Variable Temperature in a Wire carrying an Electric Current	275
7.7	The Flow of Heat in a Sphere	276
7.8	An Application to a Statistical Test of Fit	278
7.9	An Application of Theta Functions to the Smoothing of Fourier Series	283
7.10	The Operational Treatment of a Difference Equation	284
7.11	The Transient Response of an Electrical Cable	285
7.12	A Statistical Application of q -Binomial Coefficients	286
7.13	The Fluctuation Spectrum of a Non-linear Circuit Model	288

7.14	An Application to Non-linear Resonance Theory of Particles	291
7.15	q -Quantisation	293
7.16	Basic Circular Functions and the Cosmological Redshift	295
Appendix A	Selected Summation Theorems for Basic Hypergeometric Functions	302
Appendix B	Selected Identities of Rogers-Ramanujan Type	306
	Bibliography	317
	Index of Applications	341
	Index of Symbols	342
	Subject Index	344
