Preface

v

1 APPROXIMATION. MINIMAX AND LEAST-SQUARES THEORIES

1

Introduction

The Chebyshev minimax theory

Applications of minimax theory

Least-squares approximation and orthogonal polynomials

Properties of orthogonal polynomials

Legendre and Chebyshev orthogonal polynomials

Series expansion by orthogonal polynomials

Exercises 1

2 FOURIER AND CHEBYSHEV SERIES. DISCRETE LEAST-SQUARES APPROXIMATION

21

Introduction

The Fourier (trigonometric) series

The Chebyshev series

Discrete least-squares approximation

Fourier and Chebyshev discrete least-squares theories

Orthogonal polynomial discrete least-squares theory

Summary of Chebyshev expansions

Analogy between continuous and discrete least-squares expansions

Orthogonal polynomials and Gauss-type quadrature formulae

Additional notes on Chapters 1 and 2

Exercises 2

3 PRACTICAL PROPERTIES OF CHEBYSHEV POLYNOMIALS AND SERIES

48

Introduction

Elementary properties in $-1 \leq x \leq 1$

The range $0 \leq x \leq 1$

Generating functions and functional equations

Analytical properties

Evaluation, integration and differentiation of Chebyshev series

Exercises 3

4	Chebyshev Approximations for Functions Defined Explicitly	65
	Introduction	
	General methods	
	Polynomials and power series. Economization	
	The minimax polynomial	
	Interpolation in mathematical tables	
	Curve fitting	
	Methods for rational functions	
	Other methods for elementary functions	
	Exercises 4	
5	Ordinary Differential Equations	95
	Introduction	
	Chebyshev series for rational functions	
	Chebyshev series for differential systems. The integrated system	
	Chebyshev series for differential systems. The original system	
	Chebyshev series for differential systems. The 'mixed' system	
	Evaluation of methods	
	The finite approximation $\sum_{r=0}^n a_r T_r(x)$	
	The finite approximation $\sum_{r=0}^n b_r x^r$	
	Error analysis	
	Perturbation theory for rational functions	
	Perturbation theory for differential systems. The integrated system	
	Perturbation theory for the original system	
	Summary	
	The general linear differential equation	
	Non-linear differential equations	
	Additional notes on Chapter 5	
	Exercises 5	
6	Linear Integral and Partial Differential Equations	155
	Introduction	
	Fredholm integral equations of second kind	
	Other Fredholm equations	
	Parabolic partial differential equations	
	Analogue of the τ method	
	Prior integration	
	Special cases	
	Elliptic partial differential equations	
	The method of selected points	
	The eigenvalue problem	
	Curve fitting in two dimensions	
	Additional notes on Chapter 6	
	Exercises 6	

7 PROBLEMS IN LINEAR ALGEBRA	185
Introduction	
Iterative methods for linear equations	
Chebyshev acceleration	
Asymptotic convergence	
Spectroscopic eigenvalue analysis	
Exercises 7	
<i>References</i>	198
<i>Index</i>	201
