## Introduction

### 1. *Definition of a Differential Game*

1.1. Results on ordinary differential equations	4
1.2. Differential equations with control functions	6
1.3. Upper and lower $\delta$ -strategies and $\delta$ -games	9
1.4. Properties of upper and lower $\delta$ -values	12
1.5. Definition of a differential game and of its value	19
1.6. Strategies and payoff sets	21
1.7. Examples	27

### 2. *Games of Fixed Duration*

2.1. Generalization of the concept of a differential game	32
2.2. Existence of upper and lower values	34
2.3. Existence of value	38
2.4. Compactness of the space of trajectories	43
2.5. Existence of a saddle point	50
2.6. Continuity of the value	52
2.7. Construction of a saddle point	58
2.8. Computation of a saddle point for a class of games	64

### 3. *Games of Pursuit and Evasion*

3.1. Existence of extended value	78
3.2. Pursuer's upper $\delta$ -strategies near the terminal set	81
3.3. Pursuer's lower $\delta$ -strategies near the terminal set	87
3.4. Existence of value	89
3.5. Existence of a saddle point	94
3.6. Continuity of the value	97

## x CONTENTS

3.7.	Construction of a saddle point	101
3.8.	The dolichobrachistochrone game	107
3.9.	Capturability	116
<b>4.</b>	<i>Computation of Saddle Points</i>	
4.1.	Rademacher's theorem	122
4.2.	Derivation of the Isaacs equation	126
4.3.	The max-min principle for synthesized saddle points	133
4.4.	Solution of the Hamilton-Jacobi equation	148
4.5.	$\eta$ -saddle points	157
4.6.	Construction of $\eta$ -saddle points for games of fixed duration	164
4.7.	Construction of $\eta$ -saddle points for games of pursuit-evasion	170
4.8.	The isotropic rocket game (special case)	173
4.9.	The isotropic rocket game (general case)	185
<b>5.</b>	<i>Games of Survival</i>	
5.1.	Reduction to games with terminal payoff	192
5.2.	Existence of value	194
5.3.	Existence of a saddle point	197
5.4.	Continuity of the value	199
5.5.	Computation of saddle points	204
<b>6.</b>	<i>Games with Restricted Phase Coordinates</i>	
6.1.	Definition of a game with restricted phase coordinates	207
6.2.	Existence of value	210
6.3.	Existence of value (continued)	223
6.4.	Examples	230
6.5.	Existence of an $X$ -saddle point	234
6.6.	Continuity of the value	236
6.7.	Computation of $X$ -saddle points	238
6.8.	Players satisfying separate equations	241
6.9.	Games of survival	243
<b>7.</b>	<i>Selected Topics</i>	
7.1.	Games with integral bounds on the controls	246
7.2.	Capturability	255
7.3.	Games with delayed information	267
7.4.	Games with partial differential equations	271
7.5.	Fleming's definition of a value of a differential game	278
7.6.	The definition of Varaiya-Lin of a differential game	282

<b>8. <i>N</i>-Person Games</b>	
8.1. Definition of <i>N</i> -person games	285
8.2. The Hamilton-Jacobi equations	291
8.3. Construction of an equilibrium point	295
8.4. Games with integral bounds on the controls	297
8.5. Linear-quadratic games: Synthesis of the open-loop equilibrium strategy	307
8.6. Linear-quadratic games: Closed loop equilibrium strategy	318
8.7. Linear-quadratic games: Existence of stable equilibrium value	322
8.8. Other solutions for <i>N</i> -person games	330
 Bibliographical Remarks	 335
 Bibliography	 339
