<i>Preface</i>	<i>ix</i>
<i>General Notation</i>	<i>xi</i>
<i>Contents of Volume 1</i>	<i>xiii</i>

10 Auxilliary Results in Partial Differential Equations

1. Schauder's estimates for elliptic and parabolic equations	229
2. Sobolev's inequality	233
3. L^p estimates for elliptic equations	236
4. L^p estimates for parabolic equations	238
Problems	240

11 Nonattainability

1. Basic definitions; a lemma	242
2. A fundamental lemma	246
3. The case $d(x) \geq 3$	250
4. The case $d(x) \geq 2$	253
5. M consists of one point and $d = 1$	259
6. The case $d(x) = 0$	263
7. Mixed case	265
Problems	267

12 Stability and Spiraling of Solutions

1. Criterion for stability	270
2. Stable obstacles	278
3. Stability of point obstacles	283
4. The method of descent	286
5. Spiraling of solutions about a point obstacle	290
6. Spiraling of solutions about any obstacle	300
7. Spiraling for linear systems	303
Problems	306

13 The Dirichlet Problem for Degenerate Elliptic Equations

1. A general existence theorem	308
2. Convergence of paths to boundary points	315
3. Application to the Dirichlet problem	318
Problems	322

14 Small Random Perturbations of Dynamical Systems

1. The functional $I_T(\phi)$	326
2. The first Ventcel–Freidlin estimate	332
3. The second Ventcel–Freidlin estimate	334
4. Application to the first initial-boundary value problem	346
5. Behavior of the fundamental solution as $\epsilon \rightarrow 0$	348
6. Behavior of Green's function as $\epsilon \rightarrow 0$	354
7. The problem of exit	359
8. The problem of exit (continued)	367
9. Application to the Dirichlet problem	371
10. The principal eigenvalue	373
11. Asymptotic behavior of the principal eigenvalue	376
Problems	383

15 Fundamental Solutions for Degenerate Parabolic Equations

1. Construction of a candidate for a fundamental solution	388
2. Interior estimates	396
3. Boundary estimates	399
4. Estimates near infinity	406
5. Relation between K and a diffusion process	409
6. The behavior of $\xi(t)$ near S	414
7. Existence of a generalized solution in the case of a two-sided obstacle	420
8. Existence of a fundamental solution in the case of a strictly one-sided obstacle	423
9. Lower bounds on the fundamental solution	426
10. The Cauchy problem	428
Problems	432

16 Stopping Time Problems and Stochastic Games

Part I. The Stationary Case

1. Statement of the problem	433
2. Characterization of saddle points	436
3. Elliptic variational inequalities in bounded domains	440
4. Existence of saddle points in bounded domains	444
5. Elliptic estimates for increasing domains	447
6. Elliptic variational inequalities	457
7. Existence of saddle points in unbounded domains	462
8. The stopping time problem	463

Part II. The Nonstationary Case

9. Characterization of saddle points	464
10. Parabolic variational inequalities	466
11. Parabolic variational inequalities (continued)	478
12. Existence of a saddle point	486
13. The stopping time problem	488
Problems	490

17 Stochastic Differential Games

1. Auxiliary results	494
2. N -person stochastic differential games with perfect observation	498
3. Stochastic differential games with stopping time	502
4. Stochastic differential games with partial observation	507
Problems	518
<i>Bibliographical Remarks</i>	520
<i>References</i>	523
<i>Index</i>	527
