Translator's Note	v
Foreword	vii

Chapter I

Radon Transform of Test Functions and Generalized Functions on a Real Affine Space	1
1. The Radon Transform on a Real Affine Space	1
1.1. Definition of the Radon Transform	1
1.2. Relation between Radon and Fourier Transforms	4
1.3. Elementary Properties of the Radon Transform	5
1.4. The Inverse Radon Transform	8
1.5. Analog of Plancherel's Theorem for the Radon Transform	12
1.6. Analog of the Paley-Wiener Theorem for the Radon Transform	15
1.7. Asymptotic Behavior of Fourier Transforms of Characteristic Functions of Regions	19
2. The Radon Transform of Generalized Functions	21
2.1. Definition of the Radon Transform for Generalized Functions	22
2.2. Radon Transform of Generalized Functions Concentrated on Points and Line Segments	25
2.3. Radon Transform of $(x_1)_+^\lambda \delta(x_2, \dots, x_n)$	26
2.3a. Radon Transform of $(x_1)_+^k \delta(x_2, \dots, x_n)$ for Nonnegative Integer k	27
2.4. Integral of a Function over a Given Region in Terms of Integrals over Hyperplanes	31
2.5. Radon Transform of the Characteristic Function of One Sheet of a Cone	35
Appendix to Section 2.5	38
2.6. Radon Transform of the Characteristic Function of One Sheet of a Two-Sheeted Hyperboloid	40

2.7.	Radon Transform of Homogeneous Functions	43
2.8.	Radon Transform of the Characteristic Function of an Octant	44
2.9.	The Generalized Hypergeometric Function	51
3.	Radon Transforms of Some Particular Generalized Functions	55
3.1.	Radon Transforms of the Generalized Functions $(P + i0)^\lambda$, $(P - i0)^\lambda$, and P_+^λ for Nondegenerate Quadratic Forms P	56
	Appendix to Section 3.1	59
3.2.	Radon Transforms of $(P + c + i0)^\lambda$, $(P + c - i0)^\lambda$, and $(P + c)_+^\lambda$ for Nondegenerate Quadratic Forms	61
3.3.	Radon Transforms of the Characteristic Functions of Hyperboloids and Cones	63
3.4.	Radon Transform of a Delta Function Concentrated on a Quadratic Surface	66
4.	Summary of Radon Transform Formulas	69

Chapter II

	Integral Transforms in the Complex Domain	75
1.	Line Complexes in a Space of Three Complex Dimensions and Related Integral Transforms	77
1.1.	Plücker Coordinates of a Line	77
1.2.	Line Complexes	78
1.3.	A Special Class of Complexes	80
1.4.	The Problem of Integral Geometry for a Line Complex	82
1.5.	The Inversion Formula. Proof of the Theorem of Section 1.4	86
1.6.	Examples of Complexes	89
1.7.	Note on Translation Operators	92
2.	Integral Geometry on a Quadratic Surface in a Space of Four Complex Dimensions	94
2.1.	Statement of the Problem	94
2.2.	Line Generators of Quadratic Surfaces	95
2.3.	Integrals of $f(z)$ over Quadratic Surfaces and along Complex Lines	98

2.4.	Expression for $f(z)$ on a Quadratic Surface in Terms of Its Integrals along Line Generators	100
2.5.	Derivation of the Inversion Formula	103
2.6.	Another Derivation of the Inversion Formula	107
2.7.	Rapidly Decreasing Functions on Quadratic Surfaces. The Paley-Wiener Theorem	111
3.	The Radon Transform in the Complex Domain	115
3.1.	Definition of the Radon Transform	115
3.2.	Representation of $f(z)$ in Terms of Its Radon Transform	117
3.3.	Analog of Plancherel's Theorem for the Radon Transform	121
3.4.	Analog of the Paley-Wiener Theorem for the Radon Transform	123
3.5.	Radon Transform of Generalized Functions	124
3.6.	Examples	125
3.7.	The Generalized Hypergeometric Function in the Complex Domain	131

Chapter III

Representations of the Group of Complex Unimodular Matrices in Two Dimensions	133
---	-----

1. The Group of Complex Unimodular Matrices in Two Dimensions and Some of Its Realizations	134
1.1. Connection with the Proper Lorentz Group	134
1.2. Connection with Lobachevskian and Other Motions	137
2. Representations of the Lorentz Group Acting on Homogeneous Functions of Two Complex Variables	139
2.1. Representations of Groups	139
2.2. The D_x Spaces of Homogeneous Functions	141
2.3. Two Useful Realizations of the D_x	142
2.4. Representation of G on D_x	144
2.5. The $T_x(g)$ Operators in Other Realizations of D_x	145
2.6. The Dual Representations.	147
3. Summary of Basic Results concerning Representations on D_x	148
3.1. Irreducibility of Representations on the D_x and the Role of Integer Points	148

3.2.	Equivalence of Representations on the D_x and the Role of Integer Points	151
3.3.	The Problem of Equivalence at Integer Points	153
3.4.	Unitary Representations	156
4.	Invariant Bilinear Functionals	157
4.1.	Statement of the Problem and the Basic Results	157
4.2.	Necessary Condition for Invariance under Parallel Translation and Dilation	159
4.3.	Conditions for Invariance under Inversion	163
4.4.	Sufficiency of Conditions for the Existence of Invariant Bilinear Functionals (Nonsingular Case)	165
4.5.	Conditions for the Existence of Invariant Bilinear Functionals (Singular Case)	168
4.6.	Degeneracy of Invariant Bilinear Functionals	174
4.7.	Conditionally Invariant Bilinear Functionals.	175
5.	Equivalence of Representations of G	178
5.1.	Intertwining Operators	178
5.2.	Equivalence of Two Representations	182
5.3.	Partially Equivalent Representations	184
6.	Unitary Representations of G	189
6.1.	Invariant Hermitian Functionals on D_x	189
6.2.	Positive Definite Invariant Hermitian Functionals	190
6.3.	Invariant Hermitian Functionals for Noninteger ρ , $ \rho \geq 1$	193
6.4.	Invariant Hermitian Functionals in the Special Case of Integer $n_1 = n_2$	196
6.5.	Unitary Representations of G by Operators on Hilbert Space	198
6.6.	Subspace Irreducibility of the Unitary Representations	200

Chapter IV

Harmonic Analysis on the Group of Complex Unimodular Matrices in Two Dimensions	202
1. Definition of the Fourier Transform on a Group. Statement of the Problems and Summary of the Results	202
1.1. Fourier Transform on the Line	202

1.2.	Functions on G	204
1.3.	Fourier Transform on G	205
1.4.	Domain of Definition of $F(\chi)$	207
1.5.	Summary of the Results of Chapter IV	209
	Appendix. Functions on G	213
2.	Properties of the Fourier Transform on G	216
2.1.	Simplest Properties	216
2.2.	Fourier Transform as Integral Operator.	218
2.3.	Geometric Interpretation of $K(z_1, z_2; \chi)$. The Functions $\varphi(z_1, z_2; \lambda)$ and $\Phi(u, v; u', v')$	220
2.4.	Properties of $K(z_1, z_2; \chi)$	222
2.5.	Continuity of $K(z_1, z_2; \chi)$	223
2.6.	Asymptotic Behavior of $K(z_1, z_2; \chi)$	225
2.7.	Trace of the Fourier Transform	226
3.	Inverse Fourier Transform and Plancherel's Theorem for G	227
3.1.	Statement of the Problem	227
3.2.	Expression for $\varphi(z_1, z_2; \lambda)$ in Terms of $K(z_1, z_2; \chi)$	230
3.3.	Expression for $f(g)$ in Terms of $\varphi(z_1, z_2; \lambda)$	232
3.4.	Expression for $f(g)$ in Terms of Its Fourier Transform $F(\chi)$	235
3.5.	Analog of Plancherel's Theorem for G	237
3.6.	Symmetry Properties of $F(\chi)$	240
3.7.	Fourier Integral and the Decomposition of the Regular Representation of the Lorentz Group into Irreducible Representations	242
4.	Differential Operators on G	247
4.1.	Tangent Space to G	247
4.2.	Lie Operators	248
4.3.	Relation between Left and Right Derivative Operators	250
4.4.	Commutation Relations for the Lie Operators	252
4.5.	Laplacian Operators	253
4.6.	Functions on G with Rapidly Decreasing Derivatives	254
4.7.	Fourier Transforms of Lie Operators	255
5.	The Paley-Wiener Theorem for the Fourier Transform on G	256
5.1.	Integrals of $f(g)$ along "Line Generators"	257
5.2.	Behavior of $\Phi(u, v; u', v')$ under Translation and Differentiation of $f(g)$	258

5.3. Differentiability and Asymptotic Behavior of $\Phi(u, v; u', v')$	260
5.4. Conditions on $K(z_1, z_2; \chi)$	262
5.5. Moments of $f(g)$ and Their Expression in Terms of the Kernel	265
5.6. The Paley-Wiener Theorem for the Fourier Transform on G	267

Chapter V

Integral Geometry in a Space of Constant Curvature	273
1. Spaces of Constant Curvature	274
1.1. Spherical and Lobachevskian Spaces	274
1.2. Some Models of Lobachevskian Spaces	276
1.3. Imaginary Lobachevskian Spaces	277
1.3a. Isotropic Lines of an Imaginary Lobachevskian Space	278
1.4. Spheres and Horospheres in a Lobachevskian Space	280
1.5. Spheres and Horospheres in an Imaginary Lobachevskian Space	282
1.6. Invariant Integration in a Space of Constant Curvature	285
1.7. Integration over a Horosphere	287
1.8. Measures on the Absolute	288
2. Integral Transform Associated with Horospheres in a Lobachevskian Space	290
2.1. Integral Transform Associated with Horospheres	291
2.2. Inversion Formula for $n = 3$	293
2.3. Inversion Formula for Arbitrary Dimension	300
2.4. Functions Depending on the Distance from a Point to a Horosphere, and Their Averages	302
3. Integral Transform Associated with Horospheres in an Imaginary Lobachevskian Space	304
3.1. Statement of the Problem and Preliminary Remarks	304
3.2. Regularizing Integrals by Analytic Continuation in the Coordinates	308
3.3. Derivation of the Inversion Formula	314
3.4. Derivation of the Inversion Formula (Continued)	319
3.4a. Parallel Isotropic Lines	324
3.5. Calculation of $\Phi(x, a; \mu)$	326

Chapter VI

Harmonic Analysis on Spaces Homogeneous with Respect to the Lorentz Group	331
1. Homogeneous Spaces and the Associated Representations of the Lorentz Group	331
1.1. Homogeneous Spaces	331
1.2. Representations of the Lorentz Group Associated with Homogeneous Spaces	331
1.3. The Relation between Representation Theory and Integral Geometry	332
1.4. Homogeneous Spaces and Associated Subgroups of Stability	334
1.5. Examples of Spaces Homogeneous with Respect to the Lorentz Group	335
1.6. Group-Theoretical Definition of Horospheres	339
1.7. Fourier Integral Expansions of Functions on Homogeneous Spaces	345
2. Representations of the Lorentz Group Associated with the Complex Affine Plane and with the Cone, and Their Irreducible Components	349
2.1. Unitary Representations of the Lorentz Group Associated with the Complex Affine Plane	349
2.2. Unitary Representation of the Lorentz Group Associated with the Cone	352
3. Decomposition of the Representation of the Lorentz Group Associated with Lobachevskian Space	356
3.1. Representation of the Lorentz Group Associated with Lobachevskian Space	356
3.2. Decomposition by the Horosphere Method	357
3.3. The Analog of Plancherel's Theorem for Lobachevskian Space	362
4. Decomposition of the Representation of the Lorentz Group Associated with Imaginary Lobachevskian Space	364
4.1. Representation of the Lorentz Group Associated with Imaginary Lobachevskian Space	364

4.2.	Decomposition of the Representation Associated with Horospheres of the First Kind	365
4.3.	Decomposition of the Representation Associated with Isotropic Lines	367
4.4.	Decomposition of the Representation Associated with Imaginary Lobachevskian Space	373
4.5.	The Analog of Plancherel's Theorem for Imaginary Lobachevskian Space	381
4.6.	Integral Transform Associated with Planes in Lobachevskian Space	383
5.	Integral Geometry and Harmonic Analysis on the Point Pairs on the Complex Projective Line	385

Chapter VII

	Representations of the Group of Real Unimodular Matrices in Two Dimensions	390
1.	Representations of the Real Unimodular Matrices in Two Dimensions Acting on Homogeneous Functions of Two Real Variables	390
1.1.	The D_x Spaces of Homogeneous Functions	390
1.2.	Two Useful Realizations of D_x	392
1.3.	Representation of G on D_x	392
1.4.	The $T_x(g)$ Operators in Other Realizations of D_x	393
1.5.	The Dual Representations.	394
2.	Summary of the Basic Results concerning Representations on D_x	395
2.1.	Irreducibility of Representations on D_x	395
2.2.	Equivalence of Representations on D_x and the Role of Integer Points	397
2.3.	The Problem of Equivalence at Integer Points	398
2.4.	Unitary Representations	399
3.	Invariant Bilinear Functionals	400
3.1.	Invariance under Translation and Dilation	401
3.2.	Necessary and Sufficient Conditions for the Existence of an Invariant Bilinear Functional	404

3.3.	Degenerate Invariant Bilinear Functionals for Analytic Representations	409
3.4.	Conditionally Invariant Bilinear Functionals	411
4.	Equivalence of Two Representations	413
4.1.	Intertwining Operators	413
4.2.	Equivalence of Two Representations	416
4.3.	Partially Equivalent Representations	418
4.4.	Other Models of F_s^+ and F_s^-	423
5.	Unitary Representations of G	424
5.1.	Existence of an Invariant Hermitian Functional	424
5.2.	Positive Definite Invariant Hermitian Functionals (Nonanalytic Representations)	426
5.3.	Invariant Hermitian Functionals for Analytic Representations	429
5.4.	Invariant Positive Definite Hermitian Functionals on the Analytic Function Spaces F_s^+ and F_s^-	432
5.5.	Unitary Representations of G by Operators on Hilbert Space	434
5.6.	Inequivalence of the Representations of the Discrete Series	437
5.7.	Subspace Irreducibility of the Unitary Representations	438
	Notes and References to the Literature	440
	Bibliography	442
	Index	445
