PREFACE

v

CHAPTER I

Meromorphic Decompositions and Analytic Continuation

1. Introduction	1
2. Hilbert and Dirac Spaces	2
3. Reduction from $SO(2,1)$ to $SO(1,1)$	7
4. Asymptotic Expansions Obtained from Spectral Resolutions	12
5. A Possible Generalization for Subgroup Decompositions	18
6. Reduction from $SL(2,C)$ to $SL(2,R)$	21
7. A General Formulation of the Reduction Procedure	29
8. Limits and Contractions of Lie Groups and the $t=0$ Symmetry	35
9. Analytic Continuation of the Fourier Expansion of Functions on $SO(3,R)$ and $E(2)$	39
Bibliography	48

CHAPTER II

The Fourier Transform on Lie Groups

Introduction	51
1. Fourier Transform on Groups	52
2. The Generalized-Function Approach to the Fourier Transform	59
3. Integrals on Homogeneous Spaces	64
4. The Fourier Transform as an Integral Operator	70
5. Characters of Multiplier Representations	73

6. Relations Between the Fourier Expansions of Functions on Different Real Forms of the Same Complex Group	76
7. Properties of the Cauchy Kernel	80
Bibliography	86

CHAPTER III

Cauchy Integrals on Lie Groups and Matrix
Element Functions of the Second Kind

1. Introduction	87
2. General Remarks Concerning Cauchy Kernels for Complex Lie Groups	91
3. Hua's Construction of Cauchy Kernels	94
4. Expansions of Cauchy Kernels over Compact Groups and Wigner d-Functions of the Second Kind	98
5. Group-Theoretic Meaning of the Integral Representations for the Legendre Functions of the Second Kind	101
6. Matrix Element Functions of the Second Kind for General Groups	112
Bibliography	115

CHAPTER IV

Deformation of the Fourier Integral on Groups
From Compact to Non-Compact Groups

1. Introduction	117
2. Limiting Relations for Subgroups of $SO(2,1)$	118
3. Direct Passage from a Sum to an Integral	125
4. Deformation of the Fourier Expansion from $SO(3,R)$ to $E(2)$	128
Bibliography	138

CHAPTER V

Partial Wave Analysis of the Scattering Amplitude

1. Some General Principles of Group Representations Theory	140
2. Irreducible Representations of Semidirect Products and the Poincaré Group	147
3. Partial Wave Analysis of the Scattering Amplitude	156
Bibliography	177

CHAPTER VI

Partial Wave Analysis as a Problem in Group Representation Theory

1. Introduction	179
2. A General Algebraic Viewpoint in Functional Analysis Suggested by S-Matrix Theory	180
3. The Irreducible Projection Operators Defined by Integration Over the Group	190
4. Crossing Symmetry in a Group-Theoretic Framework	197
Bibliography	206

CHAPTER VII

Remarks on the Use of Transformation Groups in Quantum Field Theory

1. Connections Between Vector Bundles and Quantum Fields	209
2. Yang-Mills Fields and the Differential Geometry of Vector Bundles	221
3. Gauge Transformation of Linear Connections; a Cohomology Interpretation	225

4. The Curvature of a Vector-Bundle Connection	229
5. Gauge Invariant Couplings Between Cross-Sections and Connections	231
Bibliography	236

CHAPTER VIII

Generalized Functions on Manifolds

1. Introduction	239
2. Dirac Spaces	240
3. Dirac Spaces Manifolds and Their Behavior Under Mappings	246
4. Generalized Functions Associated with Mappings of Pseudoriemannian Manifolds	253
5. Generalized Functions Defined by Hypersurfaces	261
6. Generalized Functions Generated by Flows	271
7. Remarks on the Behavior of Generalized Functions Under General Mappings	280
8. Generalized Functions on Fibre Spaces	290
Bibliography	301
