

CONTENTS

Preface	ix
-------------------	----

Chapter I: A Study of the Maximum Modulus and Basic Theorems

1.1	The Nature of Singular Points	1
1.2	Meromorphic Functions (Definition)	4
1.3	Entire Functions (Definition)	5
1.4–1.8	Maximum and Minimum Modulus	6
1.9	Order of Zeros	13
1.10	Algebraic Entire Functions	14
1.11	Rate of Increase of Maximum Modulus and Definition of Order.	15
1.12	The Disjunction of Zeros of a Nonconstant Entire Function	16
1.13–1.14	Fundamental Properties of the Complex Number System: Elementary Theorems on Zeros of Entire Functions	17
1.15	Hadamard's Three-Circle Theorem and Convexity	19
1.16	Infinite Products	22

Chapter II: The Expansion of Functions and Picard Theorems

2.1	Residues	26
2.2–2.3	Expansion of a Meromorphic Function	27
2.4	Expansion of an Entire Function	29
2.5	Rouché's Theorem	30
2.6	Hurwitz's Theorem	30
2.7	Picard Theorems for Functions of Finite Order	31

Chapter III: Theorems Concerning the Modulus of a Function and Its Zeros

3.1	Inequalities for $\mathcal{P}\{f(z)\}$	40
3.2	Poisson's Integral Formula	42
3.3	Jensen's Theorem	43
3.4	The Poisson–Jensen Formula	47
3.5	Carleman's Theorem	48
3.6	Schwarz's Lemma	52
3.7	A Theorem of Borel and Carathéodory.	53

Chapter IV: Infinite Product Representation: Order and Type

4.1	Weierstrass Factorization Theorem	56
4.2	Order of an Entire Function	59
4.3	Type of an Entire Function	61
4.4	Growth of $f(z)$ in Unbounded Subdomains of the Plane	62
4.5–4.6	Enumerative Function $n(r)$	63
4.7	Exponent of Convergence	65
4.8	Genus of a Canonical Product.	66
4.9	Hadamard's Factorization Theorem	68
4.10	Order and Exponent of Convergence	71
4.11	Genus of an Entire Function	74
4.12–4.13	Order and Type of an Entire Function Defined by Power Series	74
4.14	On an Entire Function of an Entire Function (G. Pólya)	80

Chapter V: Standard Functions and Characterization Theorems

5.1	The Gamma Function	83
5.2	Analytic Continuation of $\Gamma(z)$	88
5.3	Conjugate Points	92
5.4	Bessel's Function	92
5.5	The Function $F_\alpha(z) = \int_0^\infty \exp(-t^\alpha) \cos zt \, dt \quad (\alpha > 1)$	93
5.6	Order of the Derived Function	95
5.7	Laguerre's Theorem	96
5.8	Convex Sets and Lucas's Theorem	97
5.9–5.10	Mittag–Leffler Theorem	100

Chapter VI: Functions with Real and/or Negative Zeros: Minimum Modulus I and Sequences of Functions

6.1	Functions with Real Zeros Only	109
6.2	The Minimum Modulus $m(r)$	115

6.3	Sequences of Functions	118
6.4	Vitali's Convergence Theorem	121
6.5	Montel's Theorem	122

Chapter VII: Theorems of Phragmén and Lindelöf: Minimum Modulus II

7.1–7.7	Theorems of Phragmén and Lindelöf	124
7.8	The Indicator Function $h(\theta)$	129
7.9	Behavior of $m(r)$	133

Chapter VIII: Theorems of Borel, Schottky, Picard, and Landau: Asymptotic Values

8.1	a -Points of an Entire Function	145
8.2	Borel's Theorem	146
8.3–8.5	Exceptional-B Values	147
8.6	Exceptional-P Values	148
8.7	Schottky's Theorem	149
8.8	Picard's First Theorem	155
8.9	Landau's Theorem	155
8.10	Picard's Second Theorem	157
8.11	Asymptotic Values	159
8.12	Contiguous Paths	161

Chapter IX: Elementary Nevanlinna Theory

9.1	Enumerative Functions: $N(r, a), m(r, a)$	163
9.2	The Nevanlinna Characteristic $T(r)$	168
9.3	A Bound for $m(r, a)$ on $ a = 1$	170
9.4	Order of a Meromorphic Function	174
9.5	Factorization of a Meromorphic Function	175
9.6–9.7	The Ahlfors–Shimizu Characteristic $T_0(r)$	176

Appendix	182
