PREFACE v

Chapter 1 ALGEBRAIC AND ANALYTICAL BACKGROUND 1

- 1.0 Introduction 1
- 1.1 Elementary properties and theorems 2
- 1.2 Some determinantal identities 14
- 1.3 Symmetric functions 34
- 1.4 Continued fractions and the Euclidean algorithm 46
- 1.5 The Padé table 55

Chapter 2 LOCALIZATION OF ROOTS 67

- 2.0 Statement of the problem 67
- 2.1 Rational zeros 68
- 2.2 Some elementary bounds 69
- 2.3 Perturbation theorems 74
- 2.4 Descartes' rule of signs and others 82
- 2.5 Sturm sequences and the Sturm theorem 87
- 2.6 Zeros in a half-plane 96
- 2.7 The Schur algorithm and Lehmer's method 104

Chapter 3 KOENIG'S THEOREM; THE qd AND RELATED ALGORITHMS 115

- 3.0 Scope of the chapter 115
- 3.1 Koenig's theorem 116
- 3.2 Bernoulli's method and Aitken's algorithm 122
- 3.3 The qd algorithm 126
- 3.4 Quadratically convergent forms for polynomials 128
- 3.5 The ϵ algorithm 135

Chapter 4 LOCAL METHODS 140

- 4.0 Scope of the chapter 140
- 4.1 Digression on interpolating polynomials 142
- 4.2 Methods based on interpolation 149
- 4.3 One-point iterations 161
- 4.4 Iterations of higher order 166
- 4.5 The method of Laguerre 176

Chapter 5 GRAEFFE'S METHOD AND OTHERS 180

- 5.0 Scope of the chapter 180
- 5.1 Root powering 181
- 5.2 Miscellaneous methods 189

BIBLIOGRAPHY 193

INDEX 215
