

Contents

Chapter 1

The single first-order equation	1
1. Introduction	1
2. Examples	2
3. Analytic Solution and Approximation Methods in a Simple Example	4
Problems	8
4. Quasi-linear Equations	8
5. The Cauchy Problem for the Quasi-linear Equation	10
6. Examples	14
Problems	18
7. The General First-order Equation for a Function of Two Variables	19
8. The Cauchy Problem	23
9. Solutions Generated as Envelopes	28
Problems	30

Chapter 2

Second-order equations: hyperbolic equations for functions of two independent variables	31
1. Characteristics for Linear and Quasi-linear Second-order Equations	31
2. Propagation of Singularities	33
3. The Linear Second-order Equation	35
Problems	37
4. The One-Dimensional Wave Equation	38
Problems	43

Contents

5. Systems of First-order Equations (Courant-Lax Theory)	44
6. A Quasi-linear System and Simple Waves Problem	50 51

Chapter 3

Characteristic manifolds and the Cauchy problem	52
1. Notation of Laurent Schwartz Problems	52 53
2. The Cauchy Problem Problems	54 59
3. Cauchy-Kowalewski Theorem Problems	59 63
4. The Lagrange-Green Identity	64
5. The Uniqueness Theorem of Holmgren	65
6. Distribution Solutions Problems	67 70

Chapter 4

The Laplace equation	72
1. Green's Identity, Fundamental Solutions Problems	72 79
2. The Maximum Principle Problems	81 83
3. The Dirichlet Problem, Green's Function, and Poisson's Formula Problems	84 88
4. Proof of Existence of Solutions for the Dirichlet Problem Using Subharmonic Functions ("Perron's Method") Problem	89 94
5. Solution of the Dirichlet Problem by Hilbert-Space Methods Problems	94 101

Chapter 5

Hyperbolic equations in higher dimensions	103
1. The Wave Equation in n -dimensional Space	103
(a) The method of spherical means Problems	103 109
(b) Hadamard's method of descent Problems	110 111
(c) Duhamel's principle and the general Cauchy problem Problem	112 116
(d) Initial-boundary-value problems ("Mixed" problems) Problems	116 119

2. Higher-order Hyperbolic Equations with Constant Coefficients	120
(a) Standard form of the initial-value problem	120
Problem	122
(b) Solution by Fourier transformation	122
Problems	132
(c) Solution of a mixed problem by Fourier transformation	133
(d) The method of plane waves	135
Problems	138
3. Symmetric Hyperbolic Systems	139
(a) The basic energy inequality	139
Problems	145
(b) Existence of solutions by the method of finite differences	146
Problems	155

Chapter 6

Higher-order elliptic equations with constant coefficients	156
1. The Fundamental Solution for Odd n	157
Problems	159
2. The Dirichlet Problem	160
Problems	164

Chapter 7

Parabolic equations	166
1. The Heat Equation	166
(a) The initial-value problem	166
Problems	173
(b) Maximum principle, uniqueness, and regularity	174
Problems	179
(c) A mixed problem	179
Problems	181
2. The Initial-value Problem for General Second-order Linear Parabolic Equations	181
(a) The method of finite differences and the maximum principle	181
(b) Existence of solutions of the initial-value problem	185
Problems	188
