SERIES EDITOR'S FOREWORD	xi
PREFACE	xiii
CHAPTER 1 DEGENERATE KERNELS	1
1.1 Introduction	1
1.2 Some Examples	3
1.3 Initial Value Treatment	9
1.4 General Derivation of Cauchy System	18
1.5 Eigenvalues and Critical Lengths	25
1.6 Numerical Results	29
1.7 Sufficiency of Cauchy System	35
1.8 Resolvents	40
1.9 Summary	44
Exercises	45
References	46
CHAPTER 2 SEMIDEGENERATE KERNELS	47
2.1 Introduction	47
2.2 Derivation of the Cauchy System	49
2.3 Summary of the Cauchy System	56
2.4 Numerical Examples	59
2.5 Volterra Integral Equations	68
2.6 Critical Lengths of Eigenvalues	69

	Page
2.7 FORTRAN Program	70
2.8 Discussion	80
Exercises	80
References	80
CHAPTER 3 RESOLVENTS FOR SEMIDEGENERATE KERNELS	83
3.1 Introduction	83
3.2 Initial Value Problem for Resolvent	84
3.3 Sketch of Proof	87
3.4 Proof	88
3.5 Discussion	100
Exercises	100
CHAPTER 4 DISPLACEMENT KERNELS	101
4.1 Introduction	101
4.2 The Case of An Exponential Forcing Term	103
4.3 Numerical Considerations	109
4.4 Validation of the Cauchy Method	113
4.5 The X and Y Functions	117
4.6 The Functions b and h	126
4.7 A Decomposition Formula	130
4.8 X and Y in Terms of b and h, and Related Matters	135
4.9 A Cauchy System for b and h	138
4.10 Integral Equations for b and h	140
4.11 A General Forcing Function	144
4.12 Validation for Case of General Forcing Function	149
4.13 The Resolvent Kernel	153
4.14 Another Representation Formula	157
4.15 Displacement Kernels on the Half-Line	161
4.16 An Integral Equation of Rarefied Gas Dynamics	175
4.17 Discussion	194
Exercises	196
References	196

		Page
CHAPTER 5	COMPOSITE KERNELS	199
5.1	Introduction	199
5.2	Derivation of Cauchy Problem	199
5.3	Statement of the Cauchy Problem	207
5.4	Numerical Method	210
5.5	Discussion	211
	Exercises	213
	Reference	213
CHAPTER 6	FREDHOLM RESOLVENTS FOR GENERAL KERNELS	215
6.1	Introduction	215
6.2	Derivation of the Cauchy System	216
6.3	Validation	220
6.4	Computational Aspects	222
6.5	Numerical Results	225
6.6	Discussion	230
	Exercises	231
CHAPTER 7	NONLINEAR INTEGRAL EQUATIONS	233
7.1	Introduction	233
7.2	Derivation of the Cauchy System	234
7.3	Summary of Cauchy System	239
7.4	Specialization to Linear Integral Equations	240
7.5	Numerical Aspects	243
7.6	Discussion	245
	Exercises	246
	Reference	246
CHAPTER 8	PARAMETER IMBEDDING	247
8.1	Introduction	247
8.2	Linear Integral Equations with Multiplicative Parameters	248
8.3	Nonlinear Integral Equations	255
8.4	Linear Integral Equations with Nonlinear Parameters	267
8.5	Application to Lebedev-Ufland Equation of Elasticity	275

	Page
8.6 Parameter Imbedding for the Ambarzumian Integral Equation	282
8.7 Eigenvalue Problems	295
8.8 Summary	300
Exercises	301
References	301
CHAPTER 9 RADIATIVE TRANSFER	303
9.1 Introduction	303
9.2 Physical Derivation of Cauchy System for Source Function	305
9.3 Computational Method	310
9.4 Numerical Results	313
9.5 The b and h Functions for Isotropic Illumination	314
9.6 Numerical Results for b and h Functions	325
9.7 Reduction of Monodirectional Source Problem to Isotropic Source Problem	331
9.8 X and Y Functions for Lambert's Law Reflector	337
9.9 Inverse Problems in Radiative Transfer	346
9.10 Discussion	363
References	364
CHAPTER 10 DUAL INTEGRAL EQUATIONS	365
10.1 Introduction	365
10.2 Validation of the Initial Value Problem	366
Exercise	380
References	380
INDEX	381
