PREFACE xiii

1. THE DIRAC DELTA FUNCTION AND DELTA SEQUENCES

1.1	The Heaviside Function	1
1.2	The Dirac Delta Function	4
1.3	The Delta Sequences	5
1.4	A Unit Dipole	14
1.5	The Heaviside Sequences	16
	Exercises	17

2. THE SCHWARTZ–SOBOLEV THEORY OF DISTRIBUTIONS

2.1	Some Introductory Definitions	20
2.2	Test Functions	22
2.3	Linear Functionals and the Schwartz–Sobolev Theory of Distributions	25
2.4	Examples	28
2.5	Algebraic Operations on Distributions	33
2.6	Analytic Operations on Distributions	36
2.7	Examples	42
2.8	The Support and Singular Support of a Distribution	47
	Exercises	48

3. ADDITIONAL PROPERTIES OF DISTRIBUTIONS

3.1	Transformation Properties of the Delta Distribution	52
3.2	Convergence of Distributions	59
3.3	Delta Sequences with Parametric Dependence	60

3.4	Fourier Series	65
3.5	Examples	68
3.6	The Delta Function as a Stieltjes Integral	71
	Exercises	72

4. DISTRIBUTIONS DEFINED BY DIVERGENT INTEGRALS

4.1	Introduction	75
4.2	The Pseudofunction $H(x)/x^n$, $n = 1, 2, 3, \dots$	80
4.3	Functions with Algebraic Singularity of Order m	82
4.4	Examples	86
	Exercises	103

5. DISTRIBUTIONAL DERIVATIVES OF FUNCTIONS WITH JUMP DISCONTINUITIES

5.1	Distributional Derivatives in R_1	105
5.2	R_n , $n \geq 2$; Moving Surfaces of Discontinuity	109
5.3	Surface Distributions	113
5.4	Various Other Representations	115
5.5	First-Order Distributional Derivatives	117
5.6	Second-Order Distributional Derivatives	122
5.7	Higher-Order Distributional Derivatives	125
5.8	The Two-Dimensional Case	129
5.9	Examples	131

6. TEMPERED DISTRIBUTIONS AND THE FOURIER TRANSFORMS

6.1	Preliminary Concepts	137
6.2	Distributions of Slow Growth (Tempered Distributions)	139
6.3	The Fourier Transform	141
6.4	Examples	148
	Exercises	166

7. DIRECT PRODUCTS AND CONVOLUTIONS OF DISTRIBUTIONS

7.1	Definition of the Direct Product	169
7.2	The Direct Product of Tempered Distributions	176
7.3	The Fourier Transform of the Direct Product of Tempered Distributions	178
7.4	The Convolution	179
7.5	The Role of Convolution in the Regularization of the Distributions	183
7.6	Examples	185
7.7	The Fourier Transform of the Convolution	194
	Exercises	196

8. THE LAPLACE TRANSFORM

8.1	A Brief Discussion of the Classical Results	199
8.2	The Laplace Transform of Distributions	200
8.3	The Laplace Transform of the Distributional Derivatives and Vice Versa	202
8.4	Examples	204
	Exercises	210

9. APPLICATIONS TO ORDINARY DIFFERENTIAL EQUATIONS

9.1	Ordinary Differential Operators	211
9.2	Homogeneous Differential Equations	212
9.3	Inhomogeneous Differential Equations: The Integral of a Distribution	214
9.4	Examples	215
9.5	Fundamental Solutions and Green's Functions	217
9.6	Second-Order Differential Equations with Constant Coefficients	218
9.7	Eigenvalue Problems	227
9.8	Second-Order Differential Equations with Variable Coefficients	231
9.9	Fourth-Order Differential Equations	235
9.10	Differential Equations of the n th Order	238
9.11	Ordinary Differential Equations with Singular Coefficients	241
	Exercises	242

10. APPLICATIONS TO PARTIAL DIFFERENTIAL EQUATIONS

10.1	Introduction	244
10.2	Classical and Generalized Solutions	246
10.3	Fundamental Solutions	248
10.4	The Cauchy–Riemann Operator	250
10.5	The Transport Operator	251
10.6	The Laplace Operator	252
10.7	The Heat Operator	257
10.8	The Schrödinger Operator	259
10.9	The Helmholtz Operator	261
10.10	The Wave Operator	263
10.11	The Inhomogeneous Wave Equation	268
10.12	The Klein–Gordon Operator	276
	Exercises	281

11. APPLICATIONS TO BOUNDARY VALUE PROBLEMS

11.1	Poisson's Equation	287
11.2	Dumbbell-Shaped Bodies	290
11.3	Uniform Axial Distributions	294

11.4	Linear Axial Distributions	298	
11.5	Parabolic Axial Distributions, $n = 5$	299	
11.6	The Fourth-Order Polynomial Distribution, $n = 7$; Spheroidal Cavities	301	
11.7	The Polarization Tensor for a Spheroid	303	
11.8	The Virtual Mass Tensor for a Spheroid	306	
11.9	The Electric and Magnetic Polarizability Tensors	308	
11.10	The Distributional Approach to Scattering Theory	310	
11.11	Stokes Flow	317	
11.12	Displacement-Type Boundary Value Problems in Elastostatics		319
11.13	The Extension to Elastodynamics	325	
11.14	Distributions on Arbitrary Lines	332	
11.15	Distributions on Plane Curves	334	
11.16	Distributions on a Circular Disk	335	

12. APPLICATIONS TO WAVE PROPAGATION

12.1	Introduction	337	
12.2	The Wave Equation	338	
12.3	First-Order Hyperbolic Systems	340	
12.4	Aerodynamic Sound Generation	343	
12.5	The Rankine–Hugoniot Conditions	345	

13. FUNCTIONS THAT HAVE INFINITE SINGULARITIES AT AN INTERFACE

13.1	Introduction	347	
13.2	Distributional Field Equations of the First Order		348
13.3	Applications to Electrodynamics	352	
13.4	Magnetohydrodynamic Waves in a Compressible Perfectly Conducting Fluid	355	
13.5	Second-Order Differential Equations	357	

14. LINEAR SYSTEMS

14.1	Operators	360	
14.2	The Step Response	362	
14.3	The Impulse Response	363	
14.4	The Response to an Arbitrary Input	364	
14.5	Generalized Functions as Impulse Response Functions		365
14.6	The Transfer Function	366	
14.7	Discrete-Time Systems	369	

15. MISCELLANEOUS TOPICS

15.1	The Cauchy Representation of Distributions	371	
15.2	Distributional Weight Functions for Orthogonal Polynomials		374

15.3	Applications to Probability and Statistics	390	
15.4	Applications of Generalized Functions in Economics		399
15.5	Distributional Solutions of Integral Equations	409	
References		419
