

CONTENTS

PREFACE		xi
CHAPTER 1. INTRODUCTION		
1.1 Definition		1
1.2 Regularity Conditions		3
1.3 Special Kinds of Kernels		4
1.4 Eigenvalues and Eigenfunctions		5
1.5 Convolution Integral		5
1.6 The Inner or Scalar Product of Two Functions		6
1.7 Notation		7
CHAPTER 2. INTEGRAL EQUATIONS WITH SEPARABLE KERNELS		
2.1 Reduction to a System of Algebraic Equations		8
2.2 Examples		10
2.3 Fredholm Alternative		14
2.4 Examples		21
2.5 An Approximate Method		23
Exercises		24
CHAPTER 3. METHOD OF SUCCESSIVE APPROXIMATIONS		
3.1 Iterative Scheme		26
3.2 Examples		31
3.3 Volterra Integral Equation		35
3.4 Examples		35
3.5 Some Results about the Resolvent Kernel		37
Exercises		39
CHAPTER 4. CLASSICAL FREDHOLM THEORY		
4.1 The Method of Solution of Fredholm		41
4.2 Fredholm's First Theorem		43
4.3 Examples		49
		vii

4.4	Fredholm's Second Theorem	51
4.5	Fredholm's Third Theorem	57
	Exercises	60
CHAPTER 5. APPLICATIONS TO ORDINARY DIFFERENTIAL EQUATIONS		
5.1	Initial Value Problems	61
5.2	Boundary Value Problems	64
5.3	Examples	67
5.4	Dirac Delta Function	70
5.5	Green's Function Approach	72
5.6	Examples	82
5.7	Green's Function for N th-Order Ordinary Differential Equation	84
5.8	Modified Green's Function	86
5.9	Examples	89
	Exercises	91
CHAPTER 6. APPLICATIONS TO PARTIAL DIFFERENTIAL EQUATIONS		
6.1	Introduction	94
6.2	Integral Representation Formulas for the Solutions of the Laplace and Poisson Equations	96
6.3	Examples	103
6.4	Green's Function Approach	106
6.5	Examples	110
6.6	The Helmholtz Equation	116
6.7	Examples	118
	Exercises	127
CHAPTER 7. SYMMETRIC KERNELS		
7.1	Introduction	132
7.2	Fundamental Properties of Eigenvalues and Eigenfunctions for Symmetric Kernels	138
7.3	Expansion in Eigenfunctions and Bilinear Form	142
7.4	Hilbert–Schmidt Theorem and Some Immediate Consequences	146
7.5	Solution of a Symmetric Integral Equation	151
7.6	Examples	153
7.7	Approximation of a General \mathcal{L}_2 -Kernel (Not Necessarily Symmetric) by a Separable Kernel	157
7.8	The Operator Method in the Theory of Integral Equations	158
7.9	Rayleigh–Ritz Method for Finding the First Eigenvalue	161
	Exercises	164

CHAPTER 8.	SINGULAR INTEGRAL EQUATIONS	
8.1	The Abel Integral Equation	167
8.2	Examples	171
8.3	Cauchy Principal Value for Integrals	173
8.4	The Cauchy-Type Integrals	177
8.5	Solution of the Cauchy-Type Singular Integral Equation	180
8.6	The Hilbert Kernel	184
8.7	Solution of the Hilbert-Type Singular Integral Equation	187
8.8	Examples	190
	Exercises	191
CHAPTER 9.	INTEGRAL TRANSFORM METHODS	
9.1	Introduction	194
9.2	Fourier Transform	196
9.3	Laplace Transform	197
9.4	Applications to Volterra Integral Equations with Convolution-Type Kernels	198
9.5	Examples	200
9.6	Hilbert Transform	207
9.7	Examples	210
	Exercises	211
CHAPTER 10.	APPLICATIONS TO MIXED BOUNDARY VALUE PROBLEMS	
10.1	Two-Part Boundary Value Problems	214
10.2	Three-Part Boundary Value Problems	218
10.3	Generalized Two-Part Boundary Value Problems	229
10.4	Generalized Three-Part Boundary Value Problems	234
10.5	Further Examples	242
	Exercises	249
CHAPTER 11.	INTEGRAL EQUATION PERTURBATION METHODS	
11.1	Basic Procedure	250
11.2	Applications to Electrostatics	253
11.3	Low-Reynolds-Number Hydrodynamics	257
11.4	Elasticity	272
11.5	Theory of Diffraction	279
	Exercises	282
APPENDIX		285
BIBLIOGRAPHY		290
