CONTENTS

CHAPTER 1. LINEAR DIFFERENTIAL EQUATIONS

1–1 Existence theorem for linear differential equations 1
1–2 Solution of the homogeneous equation with constant coefficients . 2
1–3 Linear differential equations with constant coefficients; nonhomogeneous case 5
1–4 Simultaneous linear differential equations 8
1–5 Simultaneous linear equations with constant coefficients . . . 11
1–6 Integrodifferential equations 17
1–7 Complex functions of a real variable 22
1–8 Differentiation and integration of complex-valued functions of t . 26
1–9 Complex solutions of linear differential equations 32
1–10 Forced vibrations 38
1–11 The *LRC* circuit 42
1–12 Response to unit function and other discontinuous inputs . . . 44
1–13 Impulse function and other generalized functions 49
1–14 Application of generalized functions to linear differential equations 56

CHAPTER 2. BASIC CONCEPTS OF SYSTEMS ANALYSIS

2–1 Operators 64
2–2 Linear Operators 66
2–3 Operators associated with linear differential equations 70
2–4 Operators associated with simultaneous linear differential equations 73
2–5 Superposition principle and interchange of operations 79
2–6 Translation and stationary systems 83
2–7 Duhamel's integral 87
2–8 Weighting function, impulse response, convolution 89
2–9 Characteristic function, transfer function, frequency response function 94
2–10 Stability 103

CHAPTER 3. ANALYTIC FUNCTIONS OF A COMPLEX VARIABLE

3–1 Functions of a complex variable. Limits and continuity . . . 108
3–2 Derivatives and differentials 109
3–3 Integrals 112

3–4 Analytic functions. Cauchy-Riemann equations 115
3–5 The functions $\log z$, a^z, z^a, $\sin^{-1} z$, $\cos^{-1} z$ 121
3–6 Integrals of analytic functions. Cauchy integral theorem . . . 125
3–7 Cauchy's integral formula 129
3–8 Power series as analytic functions 132
3–9 Power series expansion of general analytic function 135
3–10 Power series in positive and negative powers, Laurent expansion . 139
3–11 Isolated singularities of an analytic function. Zeros and poles . 142
3–12 The complex number ∞ 146
3–13 Residues 150
3–14 Residue at infinity 154
3–15 Logarithmic residues; argument principle 156
3–16 Partial fraction expansion of rational functions 158

CHAPTER 4. FOURIER SERIES AND FINITE FOURIER TRANSFORM

4–1 Response to a sum of sinusoidal terms 163
4–2 Periodic inputs. Fourier series 164
4–3 Examples of Fourier series 166
4–4 Uniform convergence 169
4–5 Uniqueness theorem for Fourier series 170
4–6 Uniformly convergent Fourier series 173
4–7 Convergence of Fourier series at a point 175
4–8 Convergence in the mean 180
4–9 Differentiation and integration of Fourier series 181
4–10 Change of period 184
4–11 Complex form of Fourier series 185
4–12 Orthogonal functions 187
4–13 Solution of differential equations by Fourier series 189
4–14 The finite Fourier transform 190
4–15 The truncated Laplace transform as an aid to computation of finite Fourier transforms 192
4–16 Properties of the finite Fourier transform 198
4–17 Convolution 201
4–18 Special convolutions 203
4–19 The inverse finite Fourier transform 208
4–20 Finite Fourier transforms of generalized functions 211
4–21 Application of finite Fourier transforms to linear differential equations 215
4–22 Proof of Theorem 23 219
4–23 The weighting function 221
4–24 Response to periodic generalized functions 224

4–25 Systems of differential equations 225
4–26 Integrodifferential equations 230
4–27 Systems analysis for periodic inputs 232

CHAPTER 5. THE FOURIER INTEGRAL AND FOURIER TRANSFORM

5–1 Introduction of the Fourier integral 235
5–2 Basic properties of the Fourier integral 236
5–3 Fourier transforms 238
5–4 Validity of the formulas 240
5–5 Examples of Fourier integrals 241
5–6 Uniform convergence for improper integrals 245
5–7 Preliminary lemmas 245
5–8 Proof of Theorem 2 248
5–9 Uniqueness theorem 252
5–10 Properties of the Fourier transform 252
5–11 Convolution 257
5–12 Special convolutions 263
5–13 The inverse Fourier transform 270
5–14 Evaluation of inverse Fourier transforms by residues 271
5–15 Proof of Theorem 18 276
5–16 Fourier transforms of generalized functions 278
5–17 Application of Fourier transforms to linear differential equations 284
5–18 The weighting function 290
5–19 Response to generalized functions as inputs 292
5–20 Application of Fourier transforms to simultaneous differential equations 295
5–21 Applications of Fourier transforms to integrodifferential equations 297
5–22 Systems analysis by Fourier transforms 298

CHAPTER 6. THE LAPLACE TRANSFORM

6–1 Introduction of the Laplace transform 301
6–2 Relations between the Laplace transform and the Fourier transform 303
6–3 Examples of Laplace transforms 303
6–4 Theory of the Laplace transform 309
6–5 Properties of the Laplace transform 311
6–6 The Laplace transform as an analytic function 316
6–7 Inverse transform 317
6–8 Evaluation of inverse transforms by residues 323
6–9 Laplace transforms analytic at infinity 324
6–10 Expansion in terms of Laguerre polynomials 331
6–11 Initial- and final-value theorems 336

6–12 Convolution 340
6–13 Special convolutions 343
6–14 Laplace transforms of generalized functions 353
6–15 Application of Laplace transforms to differential equations . . 356
6–16 Examples 360
6–17 The equation for forced vibrations 364
6–18 Weighting function. Response to generalized functions . . . 367
6–19 Application of Laplace transforms to simultaneous differential equations 369
6–20 Application of Laplace transforms to integrodifferential equations 372
6–21 System analysis by means of Laplace transforms 373
6–22 The z-transform 375
6–23 Application of the z-transform to difference equations 385
6–24 Sampled-data systems 388
6–25 Hilbert transforms 395

CHAPTER 7. STABILITY

7–1 Introduction 403
7–2 Signs of the coefficients 403
7–3 Direct method 404
7–4 Hurwitz-Routh criterion 405
7–5 Proof of Hurwitz-Routh criterion 408
7–6 Nyquist criterion. Polynomial case 415
7–7 Stability determined from graph of arg $V(i\omega)$ 417
7–8 Nyquist criterion. Rational function case 419
7–9 Root-locus method 422
7–10 Properties of the root locus 427

CHAPTER 8. TIME-VARIANT LINEAR SYSTEMS

8–1 The linear differential equation of order n; the Wronskian . . 436
8–2 The generalized weighting function; the kernel function . . . 439
8–3 Green's function; impulse response 442
8–4 Adjoint equation 448
8–5 Solution of linear differential equations by infinite series . . . 453
8–6 Equations with coefficients asymptotic to constants 456
8–7 Perturbation method 466
8–8 Equations with coefficients which are piecewise constant . . . 468
8–9 Application of Laplace transforms 470
8–10 Equations with periodic coefficients 472
8–11 Evaluation of characteristic exponents 477
8–12 The equation of second order with periodic coefficients . . . 481

8–13 Matrix formulation of differential equations 490
8–14 Stability theorems 496
8–15 Application of Hermitian matrices 499
8–16 Response to bounded inputs 503
8–17 Operational methods 515

APPENDIX I. THE OPERATIONAL CALCULUS OF MIKUSIŃSKI . . . 529

APPENDIX II. RECAPITULATION OF PRINCIPAL TABLES 541

APPENDIX III. GLOSSARY OF SYMBOLS 565
