

## Contents

<b>Chapter I.</b>	<b>Tchebycheff Systems on a Closed Interval: Definitions, Examples, and Preliminaries . . . . .</b>	<b>1</b>
	1. Tchebycheff Systems . . . . .	1
	2. Extended Tchebycheff and Weak Tchebycheff Systems . . . . .	3
	3. Examples . . . . .	9
	4. Equivalent Polynomial Formulation of $T$ -Systems.	20
	5. Polynomials with Prescribed Zeros . . . . .	27
	6. An Interpolation Problem . . . . .	30
<b>Chapter II.</b>	<b>Moment Spaces Induced by <math>T</math>-Systems and Their Duals</b>	<b>37</b>
	1. Definition and General Structure of $\mathcal{M}_{n+1}$ . . . . .	38
	2. Boundary and Extreme Rays of $\mathcal{M}_{n+1}$ . . . . .	41
	3. Interior of $\mathcal{M}_{n+1}$ . . . . .	44
	4. An Extremal Characterization of the Canonical Measures . . . . .	49
	5. Continuity Properties of the Canonical Representations . . . . .	51
	6. An Alternate Approach to the Canonical Measures and the One-Dimensional Sections . . . . .	54
	7. Two-Dimensional Sections . . . . .	57
	8. Monotonicity of the Roots of Certain Principal Representations . . . . .	60
	9. The Dual Cone $\mathcal{P}_{n+1}$ . . . . .	64
	10. Representation Theorems for Positive Polynomials . . . . .	65
	11. Extreme Points of $\mathcal{P}_{n+1}$ . . . . .	77

<b>Chapter III.</b>	<b>The Markov-Krein Theorem and Ramifications . . . . .</b>	<b>79</b>
	1. The Extremal Values of $R(c^0)$ . . . . .	80
	2. The Markov-Krein Theorem . . . . .	81
	3. An Alternate Proof of the Markov-Krein Theorem . . . . .	83
	4. Extensions . . . . .	90
	5. Sets of Measures Defined by Moment Inequalities . . . . .	95
	6. Extreme Points of the Set of Distribution Functions with Given Moments . . . . .	101
<b>Chapter IV.</b>	<b>Complements and the Classical Moment Spaces . . . . .</b>	<b>106</b>
	1. Classical Criterion for Moment Points . . . . .	106
	2. Supporting Hyperplanes and Orthogonal Polynomials . . . . .	108
	3. The Maximal Mass $\rho(t_0)$ . . . . .	114
	4. Geometry of the Classical Tchebycheff Polynomials . . . . .	118
	5. The Simplexes $S^N$ and $B^N$ . . . . .	123
	A. The Simplex $S^N$ . . . . .	123
	B. The Simplex $B^N$ . . . . .	124
	6. Volumes of $M^n$ . . . . .	127
	7. Symmetries of the Moment Spaces . . . . .	129
	A. Boundary of $M^n$ . . . . .	129
	B. The Inverse Distribution . . . . .	130
	C. Reversal of the Unit Interval . . . . .	131
	D. Moment Spaces of Symmetric Distributions . . . . .	134
	8. Mechanical Quadrature and Principal Representations . . . . .	135
	9. Spline Functions with Prescribed Zeros . . . . .	140
<b>Chapter V.</b>	<b>Tchebycheff Systems and Moment Spaces on the Interval <math>[0, \infty)</math> . . . . .</b>	<b>144</b>
	1. Introduction . . . . .	144
	2. A General Spanning Theorem . . . . .	144
	3. General Structure of $\mathcal{M}_{n+1}$ . . . . .	146
	4. Canonical Representations, the Maximal Mass $\rho(t_0)$ and the Two-Dimensional Sections . . . . .	152
	5. The Markov-Krein Theorem . . . . .	156
	6. Another Class of Extremal Problems Whose Solutions are Canonical Measures . . . . .	159

7. Applications of the Canonical Measures to the Approximations of Laplace and Stieltjes Transforms . . . . .	163
8. Representation Theorems for Positive Polynomials . . . . .	168
9. Extreme Points and Boundary of $\mathcal{P}_{n+1}[0, \infty)$ . . . . .	171
10. Classical Criterion for Moment Points . . . . .	172
11. Relationship Between $\mathcal{P}_{n+1}$ and $\mathcal{M}_{n+1}$ . . . . .	173
12. Relationship Between $M^n[0, a]$ and $M^n[0, \infty)$ . . . . .	176

**Chapter VI. Moment Spaces of Periodic Functions and  $T$ -Systems on  $(-\infty, \infty)$  . . . . . 179**

1. Definitions . . . . .	179
2. Basic Properties of Periodic $T$ -Systems . . . . .	180
3. Two-Dimensional Sections . . . . .	182
4. The Trigonometric Moment Problem . . . . .	184
5. Examples . . . . .	186
6. Representations for Positive Polynomials and the Extreme Points of $\mathcal{M}_{n+1}$ . . . . .	190
A. Extreme Points and Boundary of $\mathcal{P}_{2m+1}$ . . . . .	195
7. Tchebycheff Systems on $(-\infty, \infty)$ . . . . .	195
8. Representations for Polynomials in $\mathcal{P}_{2m+1}(-\infty, \infty)$ . . . . .	197
9. Two-Dimensional Sections for $\{t^i\}_0^{2m}$ on $(-\infty, \infty)$ . . . . .	198
10. Two-Dimensional Sections for $\{t^i\}_0^{2m+1}$ on $(-\infty, \infty)$ . . . . .	201
11. Relationship Between $\mathcal{P}_{n+1}$ and $\mathcal{M}_{n+1}$ . . . . .	203

**Chapter VII. Moment Spaces for Tchebycheff Systems Defined on Discrete Sets . . . . . 204**

1. Introduction . . . . .	204
2. The Index of a Set $\Sigma \subset \bar{K}$ . . . . .	207
3. Polynomials with Prescribed Zeros . . . . .	210
4. Boundary and Canonical Representations of Points in $\mathcal{M}_{n+1}(\bar{K})$ . . . . .	211
5. Principal Representations . . . . .	214
6. Interlacing Properties of the Canonical Representations . . . . .	218
7. The Markov-Krein Theorem . . . . .	220
8. Complements . . . . .	223

	9. Another Class of Extremal Problems Whose Solutions are Canonical Measures . . . . .	224
	10. Applications to the Theory of Interpolation of Absolutely Monotonic Functions . . . . .	228
<b>Chapter VIII.</b>	<b>Moment Spaces Generated by Restricted Measures . . . . .</b>	<b>233</b>
	1. Introduction . . . . .	233
	2. Boundary and General Properties of the Moment Space $\Phi_{n+1}$ . . . . .	234
	3. Principal Representation of Interior Points . . . . .	237
	4. An Alternate Approach to the Construction of the Principal Representations . . . . .	240
	5. Extending a Tchebycheff System Defined on an Open Interval . . . . .	241
	6. Interlacing Properties of Canonical Representations . . . . .	246
	7. Two-Dimensional Sections . . . . .	250
	8. Tchebycheff Type Inequalities . . . . .	251
	9. Sets of Measures Defined by Moment Inequalities . . . . .	254
	10. Extensions . . . . .	258
	11. A Minimum Problem . . . . .	260
	12. Liapounov Theorem on the Range of a Vector Measure . . . . .	265
	13. Extensions of the Liapounov Theorem . . . . .	269
	14. Applications of the Liapounov Theorem . . . . .	274
<b>Chapter IX.</b>	<b>Minimax Approximation, The Markoff-Bernstein Inequality, and Related Matters . . . . .</b>	<b>278</b>
	1. Polynomials of Best Approximation . . . . .	279
	2. Polynomials of Best Approximation (Continued). . . . .	282
	3. Proof of Theorem 1.1 . . . . .	284
	4. Examples of Theorem 1.1 . . . . .	286
	5. Generalized Markoff-Bernstein Inequalities . . . . .	292
	6. Generalized Markoff-Bernstein Inequalities for Infinite Intervals . . . . .	298
	7. Generalized Markoff-Bernstein Inequalities for Periodic Functions . . . . .	300
	8. Examples and Applications . . . . .	304
	9. Complements . . . . .	311
	10. Periodic <i>ET</i> -Systems and Extremal Problems for Two Constraints . . . . .	317

<b>Chapter X.</b>	<b>Some Problems of Best Interpolating Systems, Maximization of Moment Determinants, and Applications to Optimum Experimental Designs</b>	320
	1. Introduction	320
	2. A General Equivalence Theorem	323
	3. Maximization of Certain Determinants	328
	4. Generalizations of the Féjer Problem	334
	5. Stable and Economical Interpolation Systems	338
	6. Trigonometric Systems	342
	7. Experimental Designs	349
	8. Extensions	362
	9. Open Problems	373
<b>Chapter XI.</b>	<b>Generalized Convex Functions Induced by <i>ET</i>-Systems</b>	375
	1. Preliminaries	375
	2. Properties of the Cone $C(u_0, u_1, \dots, u_n)$	381
	3. Further Properties of $C(u_0, u_1, \dots, u_n)$	393
	4. Extreme Rays of the Cones	396
	5. Dual Cone of $C(u_0, \dots, u_n)$	404
	6. Examples and Applications of the Theory of Dual Cones	410
	7. Discrete Examples	421
	8. Generalized Absolutely Monotone Functions	431
	9. Interpolation of Functions by Generalized Spline Polynomials	436
	A. Best Mean Square Approximation Properties of Natural Spline Polynomials	443
	10. Best Quadrature Formulas Involving Natural Spline Polynomials	445
	11. Differentiability Properties of Generalized Convex Functions	454
<b>Chapter XII.</b>	<b>Generalized Tchebycheff Inequalities</b>	467
	1. Introduction	467
	2. A General Theorem	470
	3. Examples	475
	4. Tchebycheff Inequalities for Classes of Unimodal Distributions	482
	5. Unimodality of Higher Order	498
<b>Chapter XIII.</b>	<b>Multivariate Tchebycheff Inequalities</b>	505
	1. Introduction	505

	2. Extreme Points of $\mathcal{A}$ . . . . .	508
	3. Tchebycheff Inequalities for $\Pr(\max_{1 \leq i \leq n}  X_i  \geq 1)$ . . . . .	512
	4. Generalizations of the Berge Inequality . . . . .	517
	5. Tchebycheff Inequalities Where $\Omega(x)$ is a Symmetric Characteristic Function . . . . .	519
	6. Tchebycheff Inequalities for a Two-Dimensional Rectangle . . . . .	523
	7. Inequalities for $\Pr(\max_{1 \leq i \leq n} X_i \geq 1)$ . . . . .	525
	8. Tchebycheff Inequalities Where $\Omega$ is a Characteristic Function of a Finite Union of Convex Regions . . . . .	527
	9. Bounds Involving the Minimum Component . . . . .	531
<b>Chapter XIV.</b>	<b>Tchebycheff Type Inequalities for Sums of Random Variables and Nonlinear Problems</b> . . . . .	<b>533</b>
	1. Statement of Theorems . . . . .	533
	2. Proofs of Theorems 1.1–1.4 . . . . .	537
	3. A Conjecture of Samuels . . . . .	542
	4. An Inequality for Sums of Nonindependent Random Variables . . . . .	547
	5. Nonlinear Problems . . . . .	549
	6. Example I: Maximum and Range of a Sample . . . . .	552
	7. Example II . . . . .	561
<b>Bibliography</b>	. . . . .	<b>566</b>
<b>Author Index</b>	. . . . .	<b>579</b>
<b>Subject Index</b>	. . . . .	<b>583</b>
