

# Contents

<b>1. Normed Spaces</b>	
1.1 Convergence and Continuity .....	2
1.2 Open and Closed Sets .....	4
1.3 Completeness .....	5
1.4 Compactness .....	5
1.5 Scalar Products .....	8
1.6 Best Approximation .....	10
<b>2. Bounded and Compact Operators</b>	
2.1 Bounded Operators .....	13
2.2 Integral Operators .....	14
2.3 Neumann Series .....	16
2.4 Compact Operators .....	17
<b>3. The Riesz Theory</b>	
3.1 Riesz Theory for Compact Operators .....	25
3.2 Spectral Theory for Compact Operators .....	31
3.3 Volterra Integral Equations .....	33
<b>4. Dual Systems and Fredholm Theory</b>	
4.1 Dual Systems Via Bilinear Forms .....	36
4.2 Dual Systems Via Sesquilinear Forms .....	37
4.3 Positive Dual Systems .....	39
4.4 The Fredholm Alternative .....	41
4.5 Boundary Value Problems .....	46
<b>5. Regularization in Dual Systems</b>	
5.1 Regularizers .....	50
5.2 Normal Solvability .....	51
5.3 Index .....	56
<b>6. Potential Theory</b>	
6.1 Harmonic Functions .....	58
6.2 Boundary Value Problems: Uniqueness .....	62
6.3 Surface Potentials .....	67
6.4 Boundary Value Problems: Existence .....	71
6.5 Supplements .....	74

<b>7. Singular Integral Equations</b>	
7.1 Hölder Continuity .....	82
7.2 The Cauchy Integral Operator .....	84
7.3 The Riemann Problem .....	91
7.4 Singular Integral Equations with Cauchy Kernel .....	94
7.5 Cauchy Integral and Logarithmic Potential .....	99
7.6 Supplements .....	105
<b>8. Sobolev Spaces</b>	
8.1 Fourier Expansion .....	108
8.2 The Sobolev Space $H^p[0, 2\pi]$ .....	109
8.3 The Sobolev Space $H^p[\Gamma]$ .....	117
8.4 Weak Solutions to Boundary Value Problems .....	124
<b>9. The Heat Equation</b>	
9.1 Initial Boundary Value Problem: Uniqueness .....	132
9.2 Heat Potentials .....	134
9.3 Initial Boundary Value Problem: Existence .....	139
<b>10. Operator Approximations</b>	
10.1 Approximations Based on Norm Convergence .....	142
10.2 Uniform Boundedness Principle .....	144
10.3 Collectively Compact Operators .....	146
10.4 Approximations Based on Pointwise Convergence .....	147
10.5 Successive Approximations .....	149
<b>11. Degenerate Kernel Approximation</b>	
11.1 Finite Dimensional Operators .....	154
11.2 Degenerate Kernels Via Interpolation .....	156
11.3 Degenerate Kernels Via Expansions .....	164
<b>12. Quadrature Methods</b>	
12.1 Numerical Integration .....	168
12.2 Nyström's Method .....	171
12.3 Nyström's Method for Weakly Singular Kernels .....	175
<b>13. Projection Methods</b>	
13.1 The Projection Method .....	184
13.2 The Collocation Method .....	189
13.3 The Galerkin Method .....	199
<b>14. Iterative Solution and Stability</b>	
14.1 The Method of Residual Correction .....	206
14.2 Multi-Grid Methods .....	210
14.3 Stability of Linear Systems .....	215

<b>15. Equations of the First Kind</b>	
15.1 Ill-Posed Problems .....	221
15.2 Regularization of Ill-Posed Problems .....	224
15.3 Compact Self Adjoint Operators .....	226
15.4 Singular Value Decomposition .....	232
15.5 Regularization Schemes .....	236
<b>16. Tikhonov Regularization</b>	
16.1 The Tikhonov Functional .....	243
16.2 Weak Convergence .....	244
16.3 Quasi-Solutions .....	245
16.4 Minimum Norm Solutions .....	250
16.5 Classical Tikhonov Regularization .....	253
<b>17. Regularization by Discretization</b>	
17.1 Projection Methods for Ill-Posed Equations .....	259
17.2 The Moment Method .....	263
17.3 Hilbert Spaces with Reproducing Kernel .....	265
17.4 Moment Collocation .....	267
<b>18. Inverse Scattering Theory</b>	
18.1 Ill-Posed Integral Equations in Potential Theory .....	270
18.2 An Inverse Acoustic Scattering Problem .....	277
18.3 Numerical Methods in Inverse Scattering .....	279
<b>Bibliography</b> .....	289
<b>Index</b> .....	297
