Preface	vii
1 Introduction to Dynamical Systems	1
1.1 Definition of dynamical system	1
1.2 Orbits and phase portraits	8
1.3 Invariant sets	10
1.4 Differential equations and dynamical systems	17
1.5 Poincaré maps	22
1.6 Exercises	29
1.7 Appendix 1: Infinite-dimensional dynamical systems defined by reaction-diffusion equations	30
1.8 Appendix 2: Bibliographical notes	34
2 Topological Equivalence, Bifurcations, and Structural Stability of Dynamical Systems	36
2.1 Equivalence of dynamical systems	36
2.2 Topological classification of generic equilibria and fixed points	42
2.3 Bifurcations and bifurcation diagrams	53
2.4 Topological normal forms for bifurcations	59
2.5 Structural stability	63
2.6 Exercises	67
2.7 Appendix: Bibliographical notes	71
3 One-Parameter Bifurcations of Equilibria in Continuous-Time Systems	73
3.1 Simplest bifurcation conditions	73
3.2 The normal form of the fold bifurcation	74
3.3 Fold bifurcation theorem	77
3.4 The normal form of the Hopf bifurcation	79
3.5 Hopf bifurcation theorem	84
3.6 Exercises	97
3.7 Appendix 1: Proof of Lemma 3.2	99
3.8 Appendix 2: Bibliographical notes	101

4 One-Parameter Bifurcations of Fixed Points in Discrete-Time Systems	103
4.1 Simplest bifurcation conditions	103
4.2 The normal form of the fold bifurcation	104
4.3 Fold bifurcation theorem	106
4.4 The normal form of the flip bifurcation	108
4.5 Flip bifurcation theorem	111
4.6 The “normal form” of the Neimark-Sacker bifurcation	114
4.7 Neimark-Sacker bifurcation theorem	118
4.8 Exercises	126
4.9 Appendix 1: Feigenbaum’s universality	127
4.10 Appendix 2: Proof of Lemma 4.3	131
4.11 Appendix 3: Bibliographical notes	136
5 Bifurcations of Equilibria and Periodic Orbits in n-Dimensional Systems	138
5.1 Center manifold theorems	138
5.2 Center manifolds in parameter-dependent systems	144
5.3 Bifurcations of limit cycles	148
5.4 Computation of center manifolds	151
5.5 Exercises	166
5.6 Appendix 1: Hopf bifurcation in reaction-diffusion systems on the interval with Dirichlet boundary conditions	168
5.7 Appendix 2: Bibliographical notes	176
6 Bifurcations of Orbits Homoclinic and Heteroclinic to Hyperbolic Equilibria	178
6.1 Homoclinic and heteroclinic orbits	178
6.2 Andronov-Leontovich theorem	183
6.3 Homoclinic bifurcations in three-dimensional systems: Shil’nikov theorems	193
6.4 Homoclinic bifurcations in n -dimensional systems	208
6.5 Exercises	210
6.6 Appendix 1: Bibliographical notes	212
7 Other One-Parameter Bifurcations in Continuous-Time Systems	214
7.1 Codim 1 bifurcations of homoclinic orbits to nonhyperbolic equilibria	214
7.2 “Exotic” bifurcations	227
7.3 Bifurcations on invariant tori	229
7.4 Bifurcations in symmetric systems	236
7.5 Exercises	248
7.6 Appendix 1: Bibliographical notes	250

8 Two-Parameter Bifurcations of Equilibria in Continuous-Time Dynamical Systems	252
8.1 List of codim 2 bifurcations of equilibria	252
8.2 Cusp bifurcation	259
8.3 Bautin (generalized Hopf) bifurcation	265
8.4 Bogdanov-Takens (double-zero) bifurcation	272
8.5 Fold-Hopf (zero-pair) bifurcation	287
8.6 Hopf-Hopf bifurcation	305
8.7 Exercises	324
8.8 Appendix 1: Limit cycles and homoclinic orbits of the Bogdanov-Takens normal form	336
8.9 Appendix 2: Bibliographical notes	345
9 Two-Parameter Bifurcations of Fixed Points in Discrete-Time Dynamical Systems	347
9.1 List of codim 2 bifurcations of fixed points	347
9.2 Cusp bifurcation	351
9.3 Generalized flip bifurcation	354
9.4 Chenciner (generalized Neimark-Sacker) bifurcation	357
9.5 Strong resonances	362
9.6 Codim 2 bifurcations of limit cycles	399
9.7 Exercises	408
9.8 Appendix 1: Bibliographical notes	412
10 Numerical Analysis of Bifurcations	414
10.1 Numerical analysis at fixed parameter values	415
10.2 One-parameter bifurcation analysis	429
10.3 Two-parameter bifurcation analysis	449
10.4 Continuation strategy	455
10.5 Exercises	456
10.6 Appendix 1: Convergence theorems for Newton methods	464
10.7 Appendix 2: Numerical analysis of homoclinic bifurcations	465
10.8 Appendix 3: Bibliographical notes	472
A Basic Notions from Algebra, Analysis, and Geometry	477
A.1 Algebra	477
A.2 Analysis	482
A.3 Geometry	485
References	487
