

Contents

Prerequisites	ix
PART ONE	
Basic Theory	1
CHAPTER I	
Complex Numbers and Functions	3
§1. Definition	3
§2. Polar Form	8
§3. Complex Valued Functions	12
§4. Limits and Compact Sets	17
Compact Sets	21
§5. Complex Differentiability	28
§6. The Cauchy–Riemann Equations	32
§7. Angles Under Holomorphic Maps	34
CHAPTER II	
Power Series	38
§1. Formal Power Series	38
§2. Convergent Power Series	49
§3. Relations Between Formal and Convergent Series	62
Sums and Products	62
Quotients	66
Composition of Series	67
§4. Analytic Functions	69
§5. The Inverse and Open Mapping Theorems	72
§6. The Local Maximum Modulus Principle	79
§7. Differentiation of Power Series	82

CHAPTER III	
Cauchy's Theorem, First Part	87
§1. Holomorphic Functions on Connected Sets	87
Appendix: Connectedness	93
§2. Integrals Over Paths	94
§3. Local Primitive for a Holomorphic Function	103
§4. Another Description of the Integral Along a Path	109
§5. The Homotopy Form of Cauchy's Theorem	115
§6. Existence of Global Primitives. Definition of the Logarithm	118
CHAPTER IV	
Cauchy's Theorem, Second Part	123
§1. The Winding Number	124
§2. Statement of Cauchy's Theorem	128
§3. Artin's Proof	137
CHAPTER V	
Applications of Cauchy's Integral Formula	144
§1. Cauchy's Integral Formula on a Disc	144
§2. Laurent Series	151
§3. Isolated Singularities	155
Removable Singularities	155
Poles	156
Essential Singularities	158
§4. Dixon's Proof of Cauchy's Theorem	162
CHAPTER VI	
Calculus of Residues	165
§1. The Residue Formula	165
§2. Evaluation of Definite Integrals	180
Fourier Transforms	182
Trigonometric Integrals	185
Mellin Transforms	187
CHAPTER VII	
Conformal Mappings	196
§1. Schwarz Lemma	198
§2. Analytic Automorphisms of the Disc	200
§3. The Upper Half Plane	203
§4. Other Examples	206
§5. Fractional Linear Transformations	215

CHAPTER VIII	
Harmonic Functions	224
§1. Definition	224
Application: Perpendicularity	228
Application: Flow Lines	230
§2. Examples	234
§3. Basic Properties of Harmonic Functions	241
§4. Construction of Harmonic Functions	244
§5. The Poisson Representation	249
PART TWO	
Various Analytic Topics	253
CHAPTER IX	
Applications of the Maximum Modulus Principle	255
§1. The Effect of Zeros, Jensen–Schwarz Lemma	255
§2. The Effect of Small Derivatives	260
Hermite Interpolation Formula	261
§3. Entire Functions with Rational Values	262
§4. The Phragmen–Lindelöf and Hadamard Theorems	268
§5. Bounds by the Real Part, Borel–Carathéodory Theorem	273
CHAPTER X	
Entire and Meromorphic Functions	276
§1. Infinite Products	276
§2. Weierstrass Products	280
§3. Functions of Finite Order	286
§4. Meromorphic Functions, Mittag–Leffler Theorem	290
CHAPTER XI	
Elliptic Functions	292
§1. The Liouville Theorems	292
§2. The Weierstrass Function	295
§3. The Addition Theorem	299
§4. The Sigma and Zeta Functions	302
CHAPTER XII	
Differentiating Under an Integral	307
§1. The Differentiation Lemma	308
§2. The Gamma Function	311
Proof of Stirling’s Formula	316

CHAPTER XIII

Analytic Continuation	324
§1. Schwarz Reflection	324
§2. Continuation Along a Path	330

CHAPTER XIV

The Riemann Mapping Theorem	340
§1. Statement and Application to Picard's Theorem	340
§2. Compact Sets in Function Spaces	344
§3. Proof of the Riemann Mapping Theorem	347
§4. Behavior at the Boundary	351

Appendix

Cauchy's Formula for C^∞ Functions	359
Index	365
