

TABLE OF CONTENTS

PREFACE	ix
CHAPTER 1. EXPANSION IN A FINITE INTERVAL	1
1. Sturm-Liouville operators	1
2. Asymptotic formulas for the eigenvalues and eigenfunctions .	5
3. Zeros of eigenfunctions	14
4. Periodic solutions.	18
5. Proof of the expansion theorem by the method of finite differences	25
6. Proof of the expansion theorem by the method of integral equations.	33
7. Proof of the expansion theorem in the periodic case.	39
8. Proof of the expansion theorem by the method of contour integration	41
9. Sharpening of the expansion theorem	45
10. One-dimensional Dirac systems.	48
11. Asymptotic formulas for the eigenvalues and eigen-vector-functions	52
12. Proof of the expansion theorem by the method of finite differences	58
13. Proof of the expansion theorem by the method of integral equations.	67
14. Calculation of the regularized trace for a Sturm-Liouville operator	77
15. Selfadjoint n th order differential operators.	82
16. Proof of the completeness of the system of eigenfunctions of a selfadjoint differential operator of order $2n$ by the method of finite differences.	88
17. Calculation of the regularized trace for a fourth-order operator	92
Bibliographical references	99

CHAPTER 2. EIGENFUNCTION EXPANSIONS FOR A STURM-LIOUVILLE OPERATOR FOR THE CASE OF AN INFINITE INTERVAL	101
1. Proof of the Parseval equality for the halfline	101
2. The Weyl point and Weyl circle for a Sturm-Liouville operator	107
3. Integral representation of the resolvent	114
4. Orthogonality of the expansion	121
5. Formulas for $\rho(\lambda)$ and $m(z)$	132
6. Proof of the Parseval equality for the case of the entire line. .	137
7. Integral representation of the resolvent for the case of the entire line.	145
8. Formulas for the functions $\xi(\lambda)$, $\zeta(\lambda)$ and $\eta(\lambda)$	152
9. The Parseval equality for an n th order selfadjoint differential operator	159
Bibliographical references	165
CHAPTER 3. EXPANSION IN THE SINGULAR CASE FOR A DIRAC SYSTEM	167
1. Proof of the Parseval equality for a Dirac system	167
2. The Weyl circle and Weyl point for a Dirac system	174
3. Integral representation of the resolvent. Formulas for the functions $\rho(\lambda)$ and $m(z)$	180
4. Proof of the Parseval equality for the case of the entire line	188
Bibliographical references	196
CHAPTER 4. INVESTIGATION OF THE SPECTRUM	197
1. Discrete spectrum	197
2. An oscillation theorem for the interval $(0, \infty)$	201
3. Investigation of the spectrum for the case $q(x) \in \mathcal{L}(0, \infty)$. .	204
4. Transformation of the basic equation	212
5. The case $q(x) \rightarrow -\infty$	214
6. Investigation of the spectrum of a Dirac system for the case of summable coefficients	219
7. Transformation of the basic system	225
8. The case of a pure point spectrum	230
9. Other cases for the spectrum	235
Bibliographical references	238

CHAPTER 5. EXAMPLES	240
1. The classical Fourier integral	240
2. Expansion in a Fourier-Bessel series.	241
3. Expansion in a Fourier-Hankel integral	248
4. Expansion in terms of the orthogonal Čebyšev-Hermite functions	254
5. Expansion in terms of the Legendre polynomials and the associated Legendre functions	256
6. Expansion in terms of Čebyšev-Laguerre polynomials.	263
7. The "hydrogen atom"	266
8. A Dirac system	270
Bibliographical references	273
CHAPTER 6. SOLUTION OF THE CAUCHY PROBLEM FOR THE ONE-DIMENSIONAL WAVE EQUATION	274
1. Application of the method of successive approximations	274
2. Reduction to the Goursat problem.	279
3. The solution of a mixed problem on the halfline	281
4. Solution of a mixed problem on a finite interval	289
Bibliographical references	293
CHAPTER 7. EIGENFUNCTION EXPANSION OF A STURM-LIOUVILLE OPERATOR	294
1. Derivation of auxiliary formulas.	294
2. Preliminary bound on the spectral function. The case of the entire line.	298
3. Asymptotic behaviour of the spectral function. Case of the entire line	304
4. Asymptotic behaviour of the spectral function. The case of the halfline	308
5. Riesz summability of the spectral function	311
6. Proof of a theorem on equiconvergence	314
7. Convergence and summability of an eigenfunction expansion	319
8. Asymptotic behaviour of the spectral function of an equation of order $2n$	320
Bibliographical references	326

CHAPTER 8. DIFFERENTIATION OF AN EIGENFUNCTION EXPANSION.	327
1. Preliminary estimates of the derivatives of the spectral function.	327
2. Asymptotic behaviour of the derivatives of the spectral function.	333
3. Equisummability of differentiated eigenfunction expansions .	337
4. Summation of differentiated ordinary and generalized Fourier integral expansions.	342
5. Convergence of a differentiated eigenfunction expansion . . .	347
6. Justification of Fourier's method for the one-dimensional wave equation.	349
Bibliographical references	353
 CHAPTER 9. SOLUTION OF THE CAUCHY PROBLEM FOR A ONE-DIMENSIONAL DIRAC SYSTEM.	 354
1. Derivation of formulas for the solution of the Cauchy problem.	354
2. Reduction to the Goursat problem	362
3. Operator-matrix transformations.	367
4. Solution of a mixed problem on the halfline.	372
5. Solution of the problem (1.1) + (1.2) for $t < 0$	376
Bibliographical references	381
 CHAPTER 10. ASYMPTOTIC BEHAVIOUR OF THE SPECTRAL KERNEL AND ITS DERIVATIVES FOR THE CASE OF A DIRAC SYSTEM . . .	 382
1. Derivation of the basic identities	382
2. Preliminary estimation of the spectral kernel and its derivatives.	385
3. Asymptotic behaviour of the spectral kernel and spectral function.	393
4. Asymptotic behaviour of the derivatives of the spectral kernel	400
Bibliographical references	409
 CHAPTER 11. EXPANSION, AND DIFFERENTIATION OF AN EXPANSION, WITH RESPECT TO THE EIGENFUNCTIONS OF A DIRAC SYSTEM	 410
1. Some preliminary estimates	410
2. Proof of a theorem on equiconvergence	416

3. Proof of a theorem on the equisummability of differentiated expansions	423
Bibliographical references	431
CHAPTER 12. ASYMPTOTIC BEHAVIOUR OF THE NUMBER OF EIGENVALUES OF A STURM-LIOUVILLE OPERATOR	432
1. An integral equation for the Green's function	432
2. The first derivative of the function $G(x, \eta; \mu)$	439
3. The second derivative of the function $G(x, \eta; \mu)$	441
4. Further properties of the function $G(x, \eta; \mu)$	445
5. Differentiation of the Green's function with respect to μ	447
6. Asymptotic distribution of the eigenvalues	453
7. Eigenfunction expansions for an unbounded increasing potential	460
8. Asymptotic behaviour of the number of eigenvalues of an operator of order $2n$	464
Bibliographical references	466
CHAPTER 13. ELEMENTS OF THE SPECTRAL THEORY OF LINEAR OPERATORS IN HILBERT SPACE. RELATION TO DIFFERENTIAL OPERATORS.	468
1. Abstract Hilbert space	468
2. Linear functionals and bounded linear operators	472
3. Some general concepts of the theory of linear operators	475
4. Spectral analysis of selfadjoint operators	477
5. The extension of symmetric operators	481
6. A sufficient condition for the selfadjointness of a Sturm-Liouville operator on the real line or halfline	486
7. The selfadjointness of a first-order system	492
Bibliographical references	494
CHAPTER 14. SOME THEOREMS OF ANALYSIS.	495
1. The Riemann-Lebesgue lemmas	495
2. Helly's theorems	498
3. The Stieltjes inversion formula	502
4. Tauberian theorems	504
BIBLIOGRAPHY	518
