

CONTENTS

1 Introduction

1.1	Scope and purpose of the book	<i>page</i> 1
1.2	Knowledge assumed of the reader	2
1.3	Fourier series: introductory remarks	3
1.4	Fourier transforms: introductory remarks	8
1.5	Generalised functions: introductory remarks	10

2 The theory of generalised functions and their Fourier transforms

2.1	Good functions and fairly good functions	15
2.2	Generalised functions. The delta function and its derivatives	16
2.3	Ordinary functions as generalised functions	21
2.4	Equality of a generalised function and an ordinary function in an interval	25
2.5	Even and odd generalised functions	26
2.6	Limits of generalised functions	27

3 Definitions, properties and Fourier transforms of particular generalised functions

3.1	Non-integral powers	30
3.2	Non-integral powers multiplied by logarithms	34
3.3	Integral powers	35
3.4	Integral powers multiplied by logarithms	40
3.5	Summary of Fourier transform results	42

4 The asymptotic estimation of Fourier transforms

4.1	The Riemann–Lebesgue lemma	46
4.2	Generalisations of the Riemann–Lebesgue lemma	47
4.3	The asymptotic expression for the Fourier transform of a function with a finite number of singularities	51

5 Fourier series

5.1	Convergence and uniqueness of trigonometrical series as series of generalised functions	<i>page</i> 58
5.2	Determination of the coefficients in a trigonometrical series	60
5.3	Existence of Fourier-series representation for any periodic generalised function	62
5.4	Examples. Poisson's summation formula	67
5.5	Asymptotic behaviour of the coefficients in a Fourier series	71
	INDEX	77
