*Preface*

xv

## I. The Gamma Function and Related Functions

1.1	Definitions and Elementary Properties	1
1.2	Power Series and Other Series Expansions	1
1.3	Asymptotic Expansions	7
1.4	Rational Approximations for $\psi(z)$	13
1.5	Inequalities	17
1.6	Bibliographic and Numerical Data	20
1.6.1	General References	20
1.6.2	Description of and References to Tables	21
1.6.3	Description of and References to Other Approximations and Expansions	22

## II. The Binomial Function

2.1	Power Series	24
2.2	Expansions in Series of Jacobi and Chebyshev Polynomials	24
2.3	Expansions in Series of Bessel Functions	26
2.4	Padé Approximations	27
2.4.1	$(1 + 1/z)^{-c}$	27
2.4.2	The Square Root	28
2.4.3	Padé Coefficients	30
2.4.4	The Function $e^{-w}$	31
2.5	Inequalities	34

## III. Elementary Functions

3.1	Logarithmic Functions	36
3.1.1	Power Series	36
3.1.2	Expansion in Series of Chebyshev Polynomials	38
3.1.3	Padé Approximations	39
3.1.4	Inequalities	41
3.2	Exponential Function	42
3.2.1	Series Expansions	42

## CONTENTS

3.2.2	Expansions in Series of Jacobi and Chebyshev Polynomials and Bessel Functions	42
3.2.3	Padé Approximations	46
3.2.4	Inequalities	51
3.3	Circular and Hyperbolic Functions	52
3.3.1	Power Series	52
3.3.2	Expansions in Series of Jacobi and Chebyshev Polynomials and Bessel Functions	52
3.3.3	Rational and Padé Approximations	57
3.3.4	Inequalities	60
3.4	Inverse Circular and Hyperbolic Functions	61
3.4.1	Power Series	61
3.4.2	Expansions in Series of Chebyshev Polynomials	63
3.4.3	Padé Approximations	68
3.4.4	Inequalities	72
3.5	Bibliographic and Numerical Data	74
3.5.1	Description of and References to Tables	74
3.5.2	Description of and References to Other Approximations and Expansions	74

### IV. Incomplete Gamma Functions

4.1	Definitions and Series Expansions	77
4.2	Differential Equations and Difference Equations	78
4.3	Padé Approximations	79
4.3.1	${}_1F_1(1; \nu + 1; -z)$	79
4.3.2	$z^{1-\nu} e^{z\Gamma}(\nu, z)$	82
4.3.3	The Error $T_n(\nu, z)$ for $ \arg z/k  < \pi$	84
4.3.4	The Negative Real Axis and the Zeros of $F_n(\nu, z)$	89
4.4	Inequalities	95
4.4.1	$H(\nu, z)$	95
4.4.2	$\Gamma(\nu, z)$	96
4.5	Notes on the Computation of the Incomplete Gamma Function	97
4.6	Exponential Integrals	103
4.6.1	Relation to Incomplete Gamma Function and Other Properties	103
4.6.2	Expansions in Series of Chebyshev Polynomials	104
4.6.3	Rational and Padé Approximations	106
4.7	Cosine and Sine Integrals	115
4.7.1	Relation to Exponential Integral and Other Properties	115
4.7.2	Expansions in Series of Chebyshev Polynomials	116
4.8	Error Functions	119
4.8.1	Relation to Incomplete Gamma Function and Other Properties	119
4.8.2	Expansions in Series of Chebyshev Polynomials and Bessel Functions	122

CONTENTS

4.8.3	Padé Approximations	124
4.8.4	Trapezoidal Rule Approximations	134
4.8.5	Inequalities	137
4.9	Fresnel Integrals	139
4.9.1	Relation to Error Functions and Other Properties	139
4.9.2	Expansions in Series of Chebyshev Polynomials	140
4.10	Bibliographic and Numerical Data	143
4.10.1.	References	143
4.10.2	Description of and References to Tables	143
4.10.3	Description of and References to Other Approximations and Expansions	149
<b>V. The Generalized Hypergeometric Function <math>{}_pF_q</math> and the G-Function</b>		
5.1	Introduction	154
5.2	The ${}_pF_q$	155
5.2.1	Power Series	155
5.2.2	Derivatives and Contiguous Relations	159
5.2.3	Integral Representations and Integrals Involving the ${}_pF_q$	160
5.2.4	Evaluation for Special Values of the Variable and Parameters	163
5.3	The G-Function	170
5.3.1	Definition and Relation to the ${}_pF_q$	170
5.3.2	Elementary Properties	176
5.3.3	Analytic Continuation of $G_{\rho, \beta}^m, \eta(z)$	178
5.4	The Confluence Principle	179
5.5	Multiplication Theorems	184
5.6	Integrals Involving G-Functions	186
5.7	Differential Equations	190
5.7.1	The ${}_pF_q$	190
5.7.2	The G-Function	192
5.8	Series of G-Functions	194
5.8.1	Introduction	194
5.8.2	Notation	194
5.8.3	Expansion Theorems	197
5.9	Asymptotic Expansions	199
5.9.1	$G_{\rho, q}^q, \eta(z), n = 0, 1$	199
5.9.2	$G_{\rho, q}^m, \eta(z)$	201
5.9.3	${}_pF_q(z)$	206
5.10	Expansions in Series of Generalized Jacobi, Generalized Laguerre and Chebyshev Polynomials	213
5.10.1	Expansions for G-Functions	213
5.10.2	Expansions for ${}_pF_q$	220
5.11	Expansions in Series of Bessel Functions	223

## CONTENTS

5.12	Polynomial and Rational Approximations	224
5.13	Recurrence Formulas for Polynomials and Functions Occurring in Approximations to Generalized Hypergeometric Functions	234
5.13.1	Introduction	234
5.13.2	Recursion Formulas for Extended Jacobi and Laguerre Functions	235
5.13.3	Recursion Formulas for the Numerator and Denominator Polynomials in the Rational Approximations for the Generalized Hypergeometric Function	244
5.13.4	Recursion Formula for Coefficients in the Expansion of the $G$ -Function in Series of Extended Jacobi Polynomials	247
5.14	Inequalities	252

### VI. The Gaussian Hypergeometric Function ${}_2F_1$

6.1	Introduction	257
6.2	Elementary Properties	257
6.2.1	Derivatives	257
6.2.2	Contiguous Relations	258
6.2.3	Integral Representations	259
6.3	Differential Equations	260
6.4	Kummer Solutions and Transformation Formulae	262
6.5	Analytic Continuation	263
6.6	The Complete Solution and Wronskians	265
6.7	Quadratic Transformations	270
6.8	The ${}_2F_1$ for Special Values of the Argument	271
6.9	Expansion in Series of Chebyshev Polynomials	274
6.10	Padé Approximations for ${}_2F_1(1, \sigma; \rho + 1; -1/z)$	274
6.11	Inequalities	278
6.12	Bibliographic and Numerical Data	279
6.12.1	References	279
6.12.2	Description of and References to Tables	279

### VII. The Confluent Hypergeometric Function

7.1	Introduction	284
7.2	Integral Representations	284
7.3	Elementary Relations	285
7.3.1	Derivatives	285
7.3.2	Contiguous Relations	285
7.3.3	Products of Confluent Functions	286
7.4	Differential Equations	287
7.5	The Complete Solution and Wronskians	288
7.6	Asymptotic Expansions	291
7.7	Expansions in Series of Chebyshev Polynomials	293

## CONTENTS

7.8	Expansions in Series of Bessel Functions	294
7.9	Inequalities	295
7.10	Other Notations and Related Functions	295
7.11	Bibliographic and Numerical Data	296
7.11.1	References	296
7.11.2	Description of and References to Tables and Other Approximations	296

### VIII. Identification of the ${}_pF_q$ and $G$ -Functions with the Special Functions

8.1	Introduction	298
8.2	Named Special Functions Expressed as ${}_pF_q$ 's	298
8.2.1	Elementary Functions	298
8.2.2	The Incomplete Gamma Function and Related Functions	298
8.2.3	The Gaussian Hypergeometric Function	298
8.2.4	Legendre Functions	299
8.2.5	Orthogonal Polynomials	299
8.2.6	Complete Elliptic Integrals	299
8.2.7	Confluent Hypergeometric Functions, Whittaker Functions and Bessel Functions	300
8.3	Named Functions Expressed in Terms of the $G$ -Function	300
8.4	The $G$ -Function Expressed as a Named Function	306

### IX. Bessel Functions and Their Integrals

9.1	Introduction	311
9.2	Definitions, Connecting Relations and Power Series	311
9.3	Difference-Differential Formulas	313
9.4	Products of Bessel Functions	314
9.5	Asymptotic Expansions for Large Variable	315
9.6	Integrals of Bessel Functions	315
9.7	Expansions in Series of Chebyshev Polynomials	316
9.8	Expansions in Series of Bessel Functions	360
9.9	Rational Approximations	361
9.9.1	Introduction	361
9.9.2	$I_\nu(z)$ , $z$ Small	361
9.9.3	$K_\nu(z)$ , $z$ Large	366
9.10	Computation of Bessel Functions by Use of Recurrence Formulas	380
9.10.1	Introduction	380
9.10.2	Backward Recurrence Schemata for Generating $I_\nu(z)$	380
9.10.3	Closed Form Expressions	382
9.10.4	Expressions for $J_\nu(z)$	389
9.10.5	Numerical Examples	392
9.11	Evaluation of Bessel Functions by Application of Trapezoidal Type Integration Formulas	395

## CONTENTS

9.12	Inequalities	399
9.13	Bibliographic and Numerical Data	403
9.13.1	References	403
9.13.2	Description of and References to Tables	404
9.13.3	Description of and References to Other Approximations and Expansions	410

### X. Lommel Functions, Struve Functions, and Associated Bessel Functions

10.1	Definitions, Connecting Relations and Power Series	413
10.2	Asymptotic Expansions	415
10.3	Expansions in Series of Chebyshev Polynomials and Bessel Functions	415
10.4	Rational Approximations for $H_\nu(z) - Y_\nu(z)$ and the Errors in These Approximations	422
10.5	Bibliographic and Numerical Data	426
10.5.1	References	426
10.5.2	Description of and References to Tables	426

### XI. Orthogonal Polynomials

11.1	Introduction	428
11.2	Orthogonal Properties	428
11.3	Jacobi Polynomials	436
11.3.1	Expansion Formulae	436
11.3.2	Difference-Differential Formulae	439
11.3.3	Integrals	439
11.3.4	Expansion of $x^\rho$ in Series of Jacobi Polynomials	440
11.3.5	Convergence Theorems for the Expansion of Arbitrary Functions in Series of Jacobi Polynomials	442
11.3.6	Evaluation and Estimation of the Coefficients in the Expansion of a Given Function $f(x)$ in Series of Jacobi Polynomials	443
11.4	The Chebyshev Polynomials $T_n(x)$ and $U_n(x)$	453
11.5	The Chebyshev Polynomials $T_n^*(x)$ and $U_n^*(x)$	459
11.6	Coefficients for Expansion of Integrals of Functions in Series of Chebyshev Polynomials of the First Kind	464
11.6.1	Introduction	464
11.6.2	Series of Shifted Chebyshev Polynomials	464
11.6.3	Series of Chebyshev Polynomials of Even Order	468
11.6.4	Series of Chebyshev Polynomials of Odd Order	468
11.7	Orthogonality Properties of Chebyshev Polynomials with Respect to Summation	469

## CONTENTS

11.8	A Nesting Procedure for the Computation of Expansions in Series of Functions Where the Functions Satisfy a Linear Finite Difference Equation	475
<b>XII. Computation by Use of Recurrence Formulas</b>		
12.1	Introduction	483
12.2	Homogeneous Difference Equations	483
12.3	Inhomogeneous Difference Equations	487
<b>XIII. Some Aspects of Rational and Polynomial Approximations</b>		
13.1	Introduction	490
13.2	Approximations in Series of Chebyshev Polynomials of the First Kind	490
13.3	The Padé Table	493
13.4	Approximation of Functions Defined by a Differential Equation – The $\tau$ -Method	495
13.5	Approximations of Functions Defined by a Series	499
13.6	Solution of Differential Equations in Series of Chebyshev Polynomials of the First Kind	500
<b>XIV. Miscellaneous Topics</b>		
14.1	Introduction	505
14.2	Bernoulli Polynomials and Numbers	505
14.3	$D$ and $\delta$ Operators	507
14.4	Computation and Check of the Tables	509
14.5	Mathematical Constants	512
14.6	Late Bibliography	516
	<i>Bibliography</i>	517
	<i>Notation Index</i>	545
	<i>Subject Index</i>	551
