Editor's foreword .....	7
Author's preface .....	9
<b>PART 1 – BASIC THEORY</b>	
§ 1. The main theorem. Elementary examples .....	13
§ 2. Background information .....	19
1. Analytic functions .....	19
2. The Fourier transformation .....	35
3. The Mellin transformation .....	37
§ 3. The Gamma-function and its properties. ....	43
§ 4. Functions of hypergeometric type and Mellin-Barnes integrals .....	52
1. Generalized hypergeometric functions .....	52
2. Slater's theorem .....	56
3. The theorem on the representation of a Mellin-Barnes integral by the functions of hypergeometric type $\Sigma_A(z)$ and $\Sigma_B(1/z)$ . The asymptotic behaviour of $\Sigma_A(z)$ .....	66
§ 5. Gauss' hypergeometric function .....	73
1. The main properties and representations .....	73
2. The differential equation .....	80
3. Special relationships and the case of Gauss' function .....	83
§ 6. The degenerate hypergeometric function. Bessel functions and the functions ${}_0F_n$ .....	86
1. The degenerate hypergeometric function .....	86
2. Bessel functions .....	90
3. The functions ${}_0F_n(c_1, c_2, \dots, c_n; z)$ .....	95
§ 7. Typical examples of the calculation of integrals .....	97
1. Logarithmic cases .....	98
2. Polylogarithms of an arbitrary order .....	105
3. Integrals of functions containing rational powers of the argument .....	110

4. The use of the present method in conjunction with others . . .	114
5. Mellin-Barnes integrals of a general form . . . . .	116
6. Mittag-Leffler type functions . . . . .	118
7. Integrals of functions of exponential growth . . . . .	121
8. The use of multiple Mellin transformations . . . . .	123
9. Kurepa's left factorial . . . . .	126
<b>§ 8. General integral transformations and their inversion formulae . . . .</b>	<b>127</b>
1. Generalization of the Hankel transformation . . . . .	128
2. Gauss' hypergeometric transformation . . . . .	132
3. A convolution type transformation with Meijer's $G$ -function in the kernel . . . . .	134
4. A non-convolution transformation with Meijer's $G$ -function in the kernel . . . . .	137
<b>PART 2 – ALGORITHMIC TABLES OF INTEGRAL TRANSFORMS</b>	
<b>§ 9. Structure of the basic table of Mellin transforms and rules for using it . . . . .</b>	<b>143</b>
<b>§ 10. Basic table of Mellin transforms (Table of the Mellin transforms of those functions whose images are the products of ratios of Gamma-functions by constants) . . . . .</b>	<b>150</b>
1. General formulae . . . . .	150
2. Algebraic functions and powers of an arbitrary degree . . . . .	151
3. Exponential and trigonometric functions . . . . .	157
4. Logarithmic functions, polylogarithms . . . . .	161
5. Hyperbolic and inverse hyperbolic functions . . . . .	166
6. Inverse trigonometric functions . . . . .	169
7. Complete elliptic integrals . . . . .	174
8. Exponential integrals, sine and cosine integrals, error function and complementary error function, Fresnel integrals, incomplete Gamma-functions and parabolic cylinder functions . . . . .	182
9. Bessel functions and related functions . . . . .	191
10. Orthogonal polynomials . . . . .	216
11. Legendre functions . . . . .	247
12. Whittaker functions, hypergeometric functions . . . . .	283
<b>§ 11. List of notation and notation of special functions . . . . .</b>	<b>304</b>
1. Symbols frequently used . . . . .	304
2. Special functions . . . . .	306
<b>§ 12. Index of key formulae for the basic table . . . . .</b>	<b>313</b>
<b>Bibliography . . . . .</b>	<b>327</b>
<b>Index . . . . .</b>	<b>332</b>
