

PROCEEDINGS OF THE STEKLOV INSTITUTE OF MATHEMATICS
IN THE ACADEMY OF SCIENCES OF THE USSR

(Труды математического института им. В. А. Стеклова, т. ХСVII, 1968)

TABLE OF CONTENTS

	Page
The Milne problem with anisotropic scattering	1
§1. Introduction	1
§2. Ancillary constructions	7
§2. The operator \hat{g}	14
§4. The characteristic equation	21
§5. Separation of variables in the solutions of the characteristic equation	35
§6. The inhomogeneous characteristic equation	46
§7. The operator \hat{A}	62
§8. Invariance of the classes \mathcal{B}_ϵ	81
§9. The method of successive approximations. The homogeneous Milne problem	90
§10. The inhomogeneous Milne problem. Problem I	109
§11. Problem I. The Fourier method	119
§12. Some asymptotic properties of the solutions of the characteristic equation	139
§13. The inverse problem of the asymptotic theory of radiation transfer [24, 25]	147
Bibliography	158
