Introduction

0.1. An Outline of the Monograph 1

0.2. Notation 4

0.3. Background Material 5

Chapter 1. Characteristic Theory

1.1. First-Order Partial Differential Equations with the
Same Principal Part 9

1.2. Linear Characteristic Equations 17

1.3. The Riccati Equation 20

1.4. Nonlinear Characteristic Equations 27

1.5. Discrete Evolution Equations 29

Notes 32

Chapter 2. Two-Point Boundary Value Problems

2.1. Initial Value Techniques for Boundary Value Prob-
lems—A Survey 34

2.2. Derivation of the Invariant Imbedding Equation . 36

2.3. Existence Theorems for Two-Point Boundary Value Problems	42
2.4. The Numerical Solution of Nonlinear Two-Point Boundary Value Problems	51
2.5. Numerical Examples	59
Example 2.5.1. Chemical Reaction Problems . . .	60
Example 2.5.2. Biological Reaction Problems . .	61
Example 2.5.3. The Thomas–Fermi Equation—A Caveat	64
2.6. Linear Problems	67
2.7. Numerical Considerations for Linear Problems .	70
2.8. Solving Potential and Diffusion Problems . . .	80
Example 2.8.1. A Standing Wave	80
Example 2.8.2. Flow in a Fractured Oil Reservoir	82
2.9. Nonlinear Boundary Conditions	86
Example 2.9.1. Stefan–Boltzmann Radiation . . .	86
2.10. Free Boundary Problems	88
Example 2.10.1. A Minimum Fuel Problem . . .	89
Example 2.10.2. The One-Phase Stefan Problem .	91
Example 2.10.3. A Nonlinear Dynamical System .	97
2.11. Discrete Two-Point Boundary Value Problems .	99
Notes	102

Chapter 3. Interface Problems

3.1. The Invariant Imbedding Equations for Interface Problems	105
Example 3.1.1. Nonsmooth Characteristics	109
3.2. Linear Interface Problems	111
Example 3.2.1. Heat Conduction in a Composite Slab with Radiation at the Interface	113
3.3. Free Interface Problems	116
Example 3.3.1. A One-Dimensional Scattering Problem	118
Example 3.3.2. The Two-Phase Stefan Problem .	121
Example 3.3.3. A Shaft-Type Furnace	125
Example 3.3.4. Overspecified Boundary Conditions	127
3.4. Dynamic Programming	131
Example 3.4.1. Linear State and Cost Equations .	133
Example 3.4.2. Linear States and Quadratic Cost .	134

3.5. Overcoming Critical Lengths	136
Example 3.5.1. A Three-Dimensional Eigenvalue Problem	137
Notes	140
 Chapter 4. Multipoint Boundary Value Problems	
4.1. The Invariant Imbedding Equations	142
Example 4.1.1. The Blasius Equation	148
4.2. Linear Multipoint Problems	152
Example 4.2.1. The Potential Equation on an Annulus	156
Example 4.2.2. Deflection of an Elastic Rail	160
Notes	164
 Chapter 5. Invariant Imbedding for Abstract Equations	
5.1. Differential Equations in a Banach Space	165
5.2. Invariant Imbedding for Linear Evolution Equations	172
Example 5.2.1. Radiative Transfer in an Isotropic Slab	177
Example 5.2.2. Time-Dependent One-Dimensional Transport	181
Example 5.2.3. Steady-State Transport in a Solid Sphere	184
5.3. Invariant Imbedding for Mild Solutions	187
Example 5.3.1. An Optimal Pursuit Problem	193
Notes	196
 Chapter 6. Infinite-Dimensional Riccati Equations	
6.1. Local Existence Theorems	198
6.2. Non-Hermitian Equations with Bounded Coefficients	201
Example 6.2.1. Radiative Transfer in an Isotropic Slab (Continued)	204
6.3. Non-Hermitian Equations with Unbounded Coefficients	205
Example 6.3.1. Time-Dependent One-Dimensional Transport (Continued)	206

6.4. Hermitian Equations	209
Example 6.4.1. An Optimal Pursuit Problem (Continued)	211
<i>References</i>	212
<i>Index</i>	217
