PREFACE . . . . .	ix
-------------------	----

## CHAPTER 1

### *Résumé of Lie Theory*

1-1 Local Lie Groups . . . . .	1
1-2 Examples . . . . .	5
1-3 Local Transformation Groups . . . . .	12
1-4 Examples of Local Transformation Groups . . . . .	19

## CHAPTER 2

### *Representations and Realizations of Lie Algebras*

2-1 Representations of Lie Algebras . . . . .	25
2-2 Realizations of Representations . . . . .	27
2-3 Representations of $L(O_3)$ . . . . .	31
2-4 The Angular Momentum Operators . . . . .	33
2-5 The Lie Algebras $\mathcal{G}(a, b)$ . . . . .	36
2-6 Representations of $\mathcal{G}(a, b)$ . . . . .	38
2-7 Realizations of $\mathcal{G}(a, b)$ in Two Variables . . . . .	45
2-8 Realizations of $\mathcal{G}(a, b)$ in One Variable . . . . .	49

## CHAPTER 3

### *Lie Theory and Bessel Functions*

3-1 The Representations $Q(\omega, m_o)$ . . . . .	52
3-2 Recursion Relations for the Matrix Elements . . . . .	57
3-3 Realizations of $Q(\omega, m_o)$ in Two Variables . . . . .	59
3-4 Weisner's Method for Bessel Functions . . . . .	63
3-5 The Real Euclidean Group $E_3$ . . . . .	65
3-6 Unitary Representations of Lie Groups . . . . .	67
3-7 Induced Representations of $\mathcal{E}_3$ . . . . .	70

## CONTENTS

3-8 The Unitary Representations ( $\rho$ ) of $E_3$ . . . . .	71
3-9 The Matrix Elements of ( $\rho$ ) . . . . .	75
3-10 The Infinitesimal Operators of ( $\rho$ ) . . . . .	76

## CHAPTER 4

**Lie Theory and Confluent Hypergeometric Functions**

4-1 The Representation $R(\omega, m_o, \mu)$ . . . . .	79
4-2 The Representation $\uparrow_{\omega, \mu}$ . . . . .	85
4-3 The Representation $\downarrow_{\omega, \mu}$ . . . . .	89
4-4 Differential Equations for the Matrix Elements . . . . .	91
4-5 The Representation $\uparrow_{\omega_1, \mu_1} \otimes \uparrow_{\omega_2, \mu_2}$ . . . . .	94
4-6 A Realization of $R(\omega, m_o, \mu)$ by Type $D'$ Operators . . . . .	101
4-7 A Realization of $\uparrow_{\omega, \mu}$ by Type $D'$ Operators . . . . .	104
4-8 Transformations of Type $C'$ Operators . . . . .	106
4-9 Type $C'$ Realizations of $R(\omega, m_o, \mu)$ . . . . .	109
4-10 Type $C'$ Realizations of $\uparrow_{0,1}$ . . . . .	111
4-11 The Group $S_4$ . . . . .	113
4-12 Induced Representations of $\mathcal{G}_4$ . . . . .	114
4-13 The Hilbert Space $\mathcal{F}$ . . . . .	117
4-14 The Unitary Representation $(\lambda, l)$ . . . . .	119
4-15 The Matrix Elements of $(\lambda, l)$ . . . . .	122
4-16 The Unitary Representations $(\lambda, -l)$ . . . . .	125
4-17 The Tensor Products $(\lambda, l) \otimes (\lambda', l')$ . . . . .	127
4-18 The Representations $(\lambda, l) \otimes (\lambda', -l')$ . . . . .	131
4-19 The Representations $(\lambda, l) \otimes (\lambda', -l)$ . . . . .	136
4-20 The Representations $(\rho) \otimes (\lambda, l)$ . . . . .	146
4-21 A Contraction of $\mathcal{G}(0, 1)$ . . . . .	150

## CHAPTER 5

**Lie Theory and Hypergeometric Functions**

5-1 The Representation $D^\mu(u, m_o)$ . . . . .	155
5-2 The Representation $\uparrow_u$ . . . . .	161
5-3 The Representation $\downarrow_u$ . . . . .	165
5-4 The Representation $D(2u)$ . . . . .	167
5-5 The Tensor Product $D(2u) \otimes D(2v)$ . . . . .	170
5-6 The Tensor Product $\uparrow_u \otimes \uparrow_v$ . . . . .	176
5-7 Differential Relations for the Matrix Elements . . . . .	180
5-8 Type $B$ Realizations of $D(u, m_o)$ . . . . .	183
5-9 Type $B$ Realizations of $\uparrow_u$ . . . . .	187
5-10 Weisner's Method for Type $B$ Operators . . . . .	190
5-11 Type $A$ Realizations of $D(u, m_o)$ . . . . .	194
5-12 Type $A$ Realizations of $\uparrow_u$ . . . . .	200
5-13 Type $A$ Realizations of $\downarrow_u$ . . . . .	205
5-14 Type $A$ Realizations of $D(2u)$ . . . . .	206
5-15 Weisner's Method for Type $A$ Operators . . . . .	210
5-16 The Group $SU(2)$ . . . . .	214
5-17 The Group $G_3$ . . . . .	221
5-18 Unitary Representations of $G_3$ . . . . .	226
5-19 Contractions of $\mathcal{G}(1, 0)$ . . . . .	238

## CHAPTER 6

***Special Functions Related to the Euclidean Group in 3-Space***

6-1	Representations of $\mathcal{T}_6$ . . . . .	243
6-2	Type E Operators . . . . .	249
6-3	Type F Operators . . . . .	253
6-4	The Euclidean Group $E_8$ . . . . .	255
6-5	The Matrix Elements of $(\omega, s)$ . . . . .	262

## CHAPTER 7

***The Factorization Method***

7-1	Recurrence Relations . . . . .	268
7-2	The Factorization Types. . . . .	272

## CHAPTER 8

***Generalized Lie Derivatives***

8-1	Generalized Derivations . . . . .	278
8-2	Cohomology Classes of Realizations . . . . .	281
8-3	Computation of the Cohomology Classes . . . . .	289
8-4	Tables of Cohomology Classes . . . . .	293

## CHAPTER 9

***Some Generalizations***

9-1	The Lie Algebra $\mathcal{K}_5$ . . . . .	299
9-2	The Lie Group $K_5$ . . . . .	300
9-3	Representations of $\mathcal{K}_5$ . . . . .	301
9-4	The Representation $R'(\omega, m_o, \mu)$ . . . . .	302
9-5	The Representation $\uparrow_{\omega, \mu}$ . . . . .	308
9-6	The Lie Algebra $\mathcal{G}_{p,q}$ . . . . .	312
9-7	The Lie Group $G_{p,q}$ . . . . .	313
9-8	Representations of $\mathcal{G}_{p,q}$ . . . . .	314
9-9	Recursion Relations for the Matrix Elements . . . . .	316
9-10	Realizations in Two Variables . . . . .	318
9-11	Generating Functions for Generalized Bessel Functions . . . . .	320

***Appendix***

1	The Gamma Function . . . . .	324
2	The Hypergeometric Function . . . . .	325
3	The Confluent Hypergeometric Function . . . . .	327
4	Parabolic Cylinder Functions . . . . .	328
5	Bessel Functions . . . . .	329

<b><i>Bibliography</i></b> . . . . .	330
