Preface p. ix
Preface to the English edition xii

Chapter 1. Fourier series and Fourier transforms

1 *Fourier series* p. 1
2 *Dirichlet's integrals* p. 4
3 *Application to the heat transfer equation* p. 12
4 *The system of orthogonal functions in* $L^2(\Omega)$ p. 15
5 *Fourier's integral formula* p. 20
6 *Fourier transforms* p. 23
7 *Several variables and functional spaces* p. 27
8 *Multiple Fourier series* p. 31
9 *Fourier transform of several variables* p. 38
10 *Plancherel's theorem* p. 41
11 *Plancherel's theorem reconsidered* p. 44

Chapter 2. Distributions

1 *Definition of distribution and convergence of sequence of distributions* p. 47
2 *Fundamental properties of Fréchet spaces* p. 58
3 *Function spaces* $\mathscr{E}_{L^p}{}^m(\Omega)$, $\mathscr{D}_{L^p}{}^m(\Omega)$ p. 70
4 *Structures of* $\mathscr{D}'_{L^2}{}^m(\Omega)$ *and* $\mathscr{E}'$ p. 80
5 *Fourier transforms of distributions* p. 96
6 *Concrete examples of Fourier transforms* p. 107
7 *The relationship of Fourier transforms and convolutions* p. 117
8 *Laplace transforms of functions* p. 123
9 *Laplace transforms of distributions* p. 127
10 *Laplace transforms of vector-valued functions* p. 135
11 *Fourier transform of a spherically symmetric function* p. 138
12 *Elementary solutions for elliptic operators with constant coefficients* p. 142

Chapter 3. Elliptic equations (fundamental theory)

1 *Introduction* p. 147
2 *The solution of the Dirichlet problem (Green's operator)* p. 150
3 *The theorem of Rellich* p. 172
4 *Trace on boundaries (boundary values in the wider sense)* p. 176
5 *Characterization of* $\mathscr{D}_{L^2}{}^1(\Omega)$ p. 187
6 *Properties of* $\mathscr{E}_{L^2}{}^m(\Omega)$ p. 189
7 *Improving the estimation of* γf p. 190
8 *Boundary value problems for elliptic differential equations of second order* p. 195

9 *Dirichlet problems for the general second-order elliptic operators* p. 199
10 *Fredholm's alternative theorem for a completely continuous operator* p. 206
11 *Differentiability of a solution* p. 210
12 *Differentiability of a solution in the neighbourhood of a boundary* p. 217
13 *The interpolation theorem of* $\mathscr{E}_{L^2{}^m}(R_+{}^n)$ p. 227
14 *Some remarks on Dirichlet problems* p. 231
15 *The boundary value problem of the third kind* p. 234
16 *Extension of self-adjoint operators* p. 237
17 *The Dirichlet problem for an elliptic operator of higher order* p. 240

Chapter 4. Initial value problems (Cauchy problems)

1 *Introduction* p. 243
2 *The Cauchy–Kowalewski and Holmgren theorems* p. 245
3 *Notes on the solubility of the Cauchy problem* p. 252
4 *Local solubility of a Cauchy problem* p. 256
5 *The continuity of solutions for initial value problem* p. 261
6 *Dependence domain* p. 269
7 *The existence theorem of solutions* p. 272
8 *Phenomena with a finite speed of propagation* p. 276
9 *Solution of wave equations* p. 278
10 *Systems of hyperbolic first-order equations* p. 282

Chapter 5. Evolution equations

1 *Introduction* p. 286
2 *The Cauchy problem* p. 286
3 *Laplace transforms and semi-groups* p. 291
4 *Parabolic semi-groups* p. 300
5 *Semi-groups for self-adjoint operators* p. 306
6 *Two examples of parabolic equations* p. 308

Chapter 6. Hyperbolic equations

1 *Introduction* p. 311
2 *Energy inequality for a symmetric hyperbolic system* p. 311
3 *Remarks on energy inequalities* p. 316
4 *Existence theorem 1 for a solution of a system of symmetric hyperbolic equations (the case in which the coefficients are independent of t)* p. 320
5 *Existence theorem 2 for a system of symmetric hyperbolic equations (general case)* p. 329
6 *Non-symmetric hyperbolic systems* p. 336
7 *Singular integral operator* p. 338
8 *Properties of singular integral operators* p. 343
9 *Energy inequality for a system of hyperbolic equations* p. 348
10 *Energy inequality for hyperbolic equations* p. 355
11 *The existence theorem for the solution of a system of hyperbolic equations* p. 357
12 *Dependence domain* p. 361
13 *Existence theorem for the solution of a hyperbolic equation* p. 366
14 *Uniqueness of the solution of a Cauchy problem* p. 368

Chapter 7. Semi-linear hyperbolic equations

1 *Introduction* p. 377

2 *The estimation of a product of functions* p. 377
3 *Smoothness of a composed function* p. 383
4 *Existence theorem 1 (the case of the hyperbolic system)* p. 386
5 *Existence theorem 2 (case of a single equation)* p. 392
6 *Example (semi-linear wave equation)* p. 395

Chapter 8. Green's functions and spectra

1 *Introduction* p. 400
2 *Green's functions and compensating functions* p. 400
3 *Green's function for* $(\Delta - \lambda)$ p. 405
4 *Fredholm's theorem* p. 406
5 *Concrete construction of a Green's function* p. 413
6 *Properties of Green's functions* p. 424
7 *The solution of a wave equation in the exterior domain* p. 430
8 *Discrete spectrum for Schrödinger's operator* p. 436
9 *Discrete spectra and essential spectra* p. 436
10 *Friedrichs' extension* p. 438
11 *Discrete spectrum* p. 444
12 *The finiteness of a spectrum in the negative part* p. 447
13 *Self-adjoint extensions* p. 450
14 *Negative spectrum of* $-\Delta + c(x)$ p. 453

Supplementary remarks

1 *General boundary value problems of high-order elliptic equations* p. 457
2 *Completeness of a system of eigenfunctions* p. 465
