Preface	ix
---------	----

Chapter 0 ORDINARY DIFFERENTIAL EQUATIONS

1. Ordinary differential equations	1
2. Variation of parameters	7
3. Boundary value problems	11
4. Singular boundary value problems	21
Miscellaneous exercises	26

Chapter 1 FOURIER SERIES AND INTEGRALS

1. Periodic functions and Fourier series	30
2. Arbitrary period and half-range expansions	35
3. Convergence of Fourier series	43
4. Uniform convergence	47
5. Operations on Fourier series	52
6. Mean error and convergence in mean	57
7. Numerical determination of Fourier coefficients	61

8. Fourier integral	66
9. Complex methods	71
10. Applications of Fourier series and integrals	74
11. Comments and references	78
Miscellaneous exercises	79

Chapter 2 THE HEAT EQUATION

1. Derivation and boundary conditions	86
2. Steady-state temperatures	92
3. Example: Fixed end temperatures	98
4. Example: Insulated bar	104
5. Example: Different boundary conditions	108
6. Example: Convection	113
7. Sturm–Liouville problems	117
8. Expansion in series of eigenfunctions	123
9. Generalities on the heat conduction problem	126
10. Semi-infinite rod	130
11. Infinite rod	133
12. Comments and references	136
Miscellaneous exercises	138

Chapter 3 THE WAVE EQUATION

1. The vibrating string	143
2. Solution of the vibrating string problem	146
3. D'Alembert's solution	152
4. Generalities on the one-dimensional wave equation	157
5. Estimation of eigenvalues	160
6. Wave equation in unbounded regions	163
7. References	168
Miscellaneous exercises	170

Chapter 4 THE POTENTIAL EQUATION

1. Potential equation	176
2. Potential in a rectangle	179
3. Potential in a slot	184
4. Potential in a disk	188
5. Classification of partial differential equations and limitations of the product method	192
6. Comments and references	195
Miscellaneous exercises	195

Chapter 5 PROBLEMS IN SEVERAL DIMENSIONS

1. Derivation of the two-dimensional wave equation	200
2. Derivation of the two-dimensional heat equation	203
3. Solution of the two-dimensional heat equation	205
4. Problems in polar coordinates	210
5. Bessel's equation	213
6. Temperature in a cylinder	218
7. Vibrations of a circular membrane	222
8. Some applications of Bessel functions	229
9. Spherical coordinates. Legendre polynomials	234
10. References	241
Miscellaneous exercises	242

Chapter 6 LAPLACE TRANSFORM

1. Definition and elementary properties	246
2. Elementary applications. Partial fractions and convolutions	252
3. Applications to partial differential equations	258
4. More difficult examples	265
5. Comments and references	271
Miscellaneous exercises	272

Chapter 7 NUMERICAL METHODS

1. Boundary value problems	276
2. The heat equation	283
3. Two-dimensional heat equation	287
4. Potential equation	291
5. Wave equation	296
6. References	302

Bibliography	304
--------------	-----

Answers to Odd-Numbered Exercises	306
-----------------------------------	-----

Index	345
