

## CONTENTS

	<i>Page</i>
Chapter 1 – Introduction ... ..	1
Abel convergence ... ..	2
Cesàro convergence ... ..	6
The symbols $O$ , $o$ , and $\sim$ ... ..	12
A necessary condition for $(C,1)$ convergence	13
Euler–Maclaurin sum formula ... ..	14
Abel’s inequality ... ..	18
 Chapter 2 – General summability theory ... ..	 21
Basic definitions and concepts ... ..	21
The Silverman–Toeplitz theorem ... ..	23
Invertibility ... ..	37
Inclusion ... ..	40
Translativity ... ..	41
 Chapter 3 – Well-known methods of summability ... ..	 45
Nörlund and Nörlund-type transformations	45
Hölder means and Cesàro means ... ..	46
Euler, Taylor, and Borel exponential transformations ... ..	54
Hausdorff means ... ..	65
 Chapter 4 – Tauberian theorems ... ..	 75
Elementary Tauberian theorems based upon the Cesàro and Abel methods ... ..	75
Tauberian theorems continued ... ..	83
A Tauberian theorem for the Euler method $(E,1/2)$ ... ..	92
 Chapter 5 – Fourier series ... ..	 97
Basic definitions and concepts ... ..	97

	<i>Page</i>
$L^2$ space ... ..	102
Orthogonal systems ... ..	103
Gram-Schmidt orthogonalization process ...	103
Minimal property of Fourier expansions ...	108
Complete orthogonal systems ... ..	111
Mercer's theorem ... ..	112
Dirichlet's integral ... ..	113
Convergence of Fourier series ... ..	116
Convergence tests ... ..	117
Cesàro summability of Fourier series ...	120
Abel-Poisson summability of Fourier series	134
Riemann's method of summation ... ..	138
Absolute convergence ... ..	140
Fourier transforms ... ..	143
 Chapter 6 – Applications of summability to analytic continuation .. ..	 151
The Borel exponential method ... ..	151
The Okada theorem ... ..	155
 Appendix ... ..	 163
Bibliography ... ..	167
Index ... ..	171
List of Symbols ... ..	175
