SURVEY PAPERS

Positive Quadrature Methods and Positive Polynomial Sums <i>Richard Askey</i>	1
Bases in Function Spaces <i>Z. Ciesielski</i>	31
Some Recent Convergence Results on Diagonal Padé Approximants <i>A.A. Gonchar</i>	55
Box Splines <i>Klaus Höllig</i>	71
Polynomial Approximation Numbers, Capacities and Extended Green Functions for \mathbf{C} and \mathbf{C}^N <i>J. Korevaar</i>	97
Group Theoretical Methods in Approximation Theory, Elementary Number Theory, and Computational Signal Geometry <i>Walter Schempp</i>	129
Some Recent Results on Walsh Theory of Equiconvergence <i>A. Sharma</i>	173
Scientific Computation on Some Mathematical Conjectures <i>Richard S. Varga</i>	191
Some Constrained Approximation Problems <i>Joseph D. Ward</i>	211

SHORT RESEARCH PAPERS

Trivariate Adaptive Cubature <i>Peter Alfeld</i>	231
---	-----

Korovkin Inequalities in Real Normed Vector Spaces <i>George A. Anastassiou</i>	235
Local Lipschitz and Strong Unicity Constants for Certain Nonlinear Families <i>James R. Angelos, Myron S. Henry, Edwin H. Kaufman, Jr., András Kroó, and Terry D. Lenker</i>	239
Extended Lipschitz Constants <i>James Angelos, Myron Henry, Edwin Kaufman, Jr., and Terry Lenker</i>	243
Uniform Lipschitz Constants and Almost Alternation Sets <i>M. Bartelt and J. Swetits</i>	247
Asymptotic Expansions of Recurrence Coefficients of Asymmetric Freud Polynomials <i>William Bauldry, Attila Máté, and Paul Nevai</i>	251
Markov-Bernstein Inequalities for Weights such as $\exp(-\exp(x^2))$ <i>Gerhard Benadé</i>	255
On Sequences of Polynomials and the Distribution of Their Zeros <i>H.-P. Blatt and E.B. Saff</i>	259
An Algorithm for Best Uniform Approximation by Splines with Fixed Knots <i>Jörg Blatter</i>	263
Lagrange Interpolants at Equally Spaced Points in the Simplex <i>Thomas Bloom</i>	267
Derivatives of Orthogonal Polynomials and Characterization of Weights <i>S. Bonan, D.S. Lubinsky, and P. Nevai</i>	271
On Lagrange Interpolation at Points in a Disk <i>Len Bos</i>	275
A Multiple Exchange-like Algorithm for Constrained Best Approximation <i>Kenneth W. Bosworth</i>	279
Alternating Trigonometric Polynomials <i>L. Brutman</i>	283
Numerical Regularization for Restricted Pseudosolutions <i>G. Daniel Callon</i>	287
Absolute Projection Constants <i>Bruce L. Chalmers</i>	291
Best Error Bounds for L -Splines and a Related Extremal Problem Associated with Ordinary Differential Operators <i>Tianping Chen</i>	295
Bivariate Approximation Using Monotone Norms <i>E.W. Cheney</i>	299
On Quasi-Minimal Supported Bivariate Splines <i>C.K. Chui and T.X. He</i>	303
Approximation of Multivariate Functions with Boundary Singularities <i>L. Collatz</i>	307

Contents	vii
Extensions of Smoothing Spline Methods Using Generalized Cross Validation <i>Anne Daman</i>	311
Interpolation of Even Periodic Functions <i>Franz-Jürgen Delvos</i>	315
Continuous Selections for Metric Projections: Some Recent Progress <i>Frank Deutsch</i>	319
On Recovering Functions from Noisy Data <i>H.R. Diamond, M.A. Kon, L.A. Raphael</i>	323
K-Functionals and Moduli of Smoothness with Applications <i>Z. Ditzian and V. Totik</i>	327
Failure of Real Nonlinear Strong Uniqueness <i>Charles B. Dunham</i>	331
Smooth Interpolation by Bisection Algorithms <i>Nira Dyn and David Levin</i>	335
Multivariate Lacunary Interpolation <i>Tharwat Fawzy and Larry L. Schumaker</i>	339
A Triangular Surface Patch with Optimal Error Bounds <i>Thomas A. Foley</i>	343
Non-linear Approximation from a Hyperplane: Rational Approximation versus Product Approximation <i>Gerhard Gierz and Boris Shekhtman</i>	347
Polynomial Approximation on Discrete Sets <i>Manfred v. Golitschek</i>	351
Modified Picugov-Lehnhoff Operators <i>Heinz H. Gonska</i>	355
Computing with Multivariate Simplex Splines <i>Thomas Grandine</i>	359
Spectral Spline Approximation <i>Eric Grosse</i>	363
On a Scheme of Interpolation by $S_3^1(\tilde{\Delta}_{mn}^{(1)})$ <i>Zhu-rui Guo and Zhen Sha</i>	367
An Iterative Method for Solving Linear Equations Based on Minimum Norm Pick-Nevanlinna Interpolation <i>Martin H. Gutknecht</i>	371
Approximation of Newtonian Potentials <i>Rolland L. Hardy and Stuart A. Nelson</i>	375
Best Approximation by Harmonic Functions <i>Werner Haussmann and Karl Zeller</i>	379
Approximate Integration of Rapidly Oscillating Functions with Compound Precision <i>L.C. Hsu and Y.S. Zhou</i>	383
Periodic Monosplines and Perfect Splines of Least Norm <i>Daren Huang</i>	387

Monotone Approximation in Several Variables <i>Robert Huotari and David Legg</i>	391
The Pólya Algorithm on Convex Sets <i>R. Huotari, D. Legg, M. Stern, and D. Townsend</i>	395
The Natural Best L_1 -Approximation by Nondecreasing Functions <i>R. Huotari, D. Legg, and D. Townsend</i>	399
Cardinal Interpolation with Box Splines on Submodules of \mathbf{Z}^d <i>Kurt Jetter and Sherman D. Riemenschneider</i>	403
Uniform Approximation on Subsets of $[0, \infty]$ by Rational Functions <i>E.H. Kaufman, Jr., D.J. Leeming, and G.D. Taylor</i>	407
A Note on an Infinite-Interval Approximation Problem <i>E.H. Kaufman, Jr., and G.D. Taylor</i>	411
Rational Approximation and Symmetric Eigenvalue Bounds <i>L. Franklin Kemp</i>	415
A -Spaces in L_1 -Approximation <i>András Kroó</i>	419
New Estimates on the Rate of Shape Preserving Approximation <i>D. Leviatan</i>	423
On a Problem of Saff and Varga <i>A.L. Levin</i>	427
Minimal Projections and Projection Constants <i>W.A. Light</i>	431
Classical Interpolation by Polynomials in Two Variables <i>G.G. Lorentz</i>	435
A Numerical Approach to Bivariate Birkhoff Interpolation <i>R.A. Lorentz</i>	439
Asymptotics of Toeplitz Determinants and Rows of the Padé Table <i>D.S. Lubinsky</i>	443
Padé Approximants of Partial Theta Functions and the Rogers-Szegő Polynomials <i>D.S. Lubinsky and E.B. Saff</i>	447
A Generalization of Oka-Weil Approximation in a Polynomially Convex Domain in \mathbf{C}^n <i>C.H. Lutterodt</i>	451
Chebyshevian B -Splines and Knot Insertion <i>Tom Lyche</i>	455
Eigenvalues and Eigenvectors of Bounded Perturbations of Unbounded Operators <i>W.R. Madych</i>	459
On ϵ -Complexity of Certain Classes of Differentiable Functions <i>Yuly Makovoz</i>	463
Product Formulas for Eigenfunctions of Singular Sturm-Liouville Equations <i>Clemens Markt</i>	467

An Algorithm for Complex Polynomial Approximation with Nonlinear Constraints	471
<i>J.C. Mason and G. Opfer</i>	
Numerical Experiments with Cubic C^1 -Spline Functions	475
<i>Robert Gmelig Meyling</i>	
A Weighted Transfinite Diameter	479
<i>H.N. Mhaskar</i>	
Approximation by Nörlund Means of Double Fourier Series to Continuous Functions in Two Variables	483
<i>F. Móricz and B.E. Rhoades</i>	
Bivariate Cubic Periodic Spline Interpolation on a Three Direction Mesh	487
<i>H.G. ter Morsche</i>	
On Nonlinear Eigenvalue Problems	491
<i>W.F. Moss, P.W. Smith, and J.D. Ward</i>	
On Semi-Discrete Projections	495
<i>David Motte</i>	
Piecewise Linear Best L_2 Approximation on Triangulations	499
<i>Edmond Nadler</i>	
A C^1 -Conforming Finite Element of the Extended Melkes Family	503
<i>Helmut Nienhaus</i>	
The Degree of Approximation by Iterations of Positive Linear Operators	507
<i>Toshihiko Nishishiraho</i>	
Chebyshev Approximation by Splines with Free Knots and Computation	511
<i>G. Nürnberger</i>	
Factoring Lagrange Splines	515
<i>Dennis Pence</i>	
Sequences with the Strong Weyl Property	519
<i>G.M. Petersen</i>	
Intersection Properties of Balls and Approximation of Vector-Valued Functions	523
<i>João B. Prolla</i>	
L_p -Error Estimates for the Approximation by Positive Linear Operators	527
<i>Ewald Quak</i>	
On Periodic Hermite Spline Interpolation	531
<i>Karin von Radziewski</i>	
Best Coapproximation in a Normed Linear Space	535
<i>Geetha S. Rao</i>	
On the Computation of Eigenvalues of the Laplacian by the Boundary Collocation Method	539
<i>Lothar Reichel</i>	
On the Derivative of Certain Operators	543
<i>P.O. Runck, J. Szabados, and P. Vértesi</i>	

Finite Dimensional Approximation of Ill-posed Problems and Iterative Methods	547
<i>Eberhard Schock</i>	
Some Approximation Properties of a System of Interpolation Function	551
<i>Xie-Chang Shen</i>	
Accumulation of Zeros of Approximating and Interpolating Polynomials	555
<i>M. Simkani</i>	
Approximation Closeness Measured by $\epsilon = \epsilon(p)$, with Zeros	559
<i>Annette Sinclair</i>	
Some Properties of Unicity Subspaces in L_1 -Approximation	563
<i>Manfred Sommer</i>	
An Algorithm for Best Approximations from a Closed Convex Cone	567
<i>V.P. Sreedharan</i>	
Non-Diagonal Padé Approximants to Markov Functions	571
<i>Herbert Stahl</i>	
Best L_∞ -Approximation with Constraints by Finite Dimensional Subspaces	575
<i>Hans Strauss</i>	
On the Theory of Approximation Operators over Local Fields	579
<i>Weiyi Su and Weixing Zheng</i>	
Optimal Interpolation on Some Class of Differentiable Functions	583
<i>Yongshen Sun and Daren Huang</i>	
Existence of Pole-free Rational Approximation on Supersets	587
<i>G.D. Taylor</i>	
Existence of Best Approximations II	591
<i>A.B. Thaheem</i>	
Boundary Conditions with Bivariate Quadratic B -Splines	595
<i>C.R. Traas</i>	
Matlab Programs for CF Approximation	599
<i>Lloyd N. Trefethen</i>	
Positive Smoothing Splines	603
<i>Florencio I. Utreras</i>	
A Modified Dual Algorithm for the Computation of the Monotone Cubic Spline	607
<i>María Leonor Varas</i>	
On Convergence of Pal-type Interpolation Polynomials	615
<i>Ting-fan Xie</i>	
Weighted Approximation of Bivariate Functions by Lacunary Polynomials	617
<i>Jia-rong Yu</i>	
A Bibliography on Approximation of Functions by Bernstein-type Operators (Supplement 1986)	621
<i>Heinz H. Gonska and Jutta Meier-Gonska</i>
