Chapter 1

PROBLEMS IN PARTIAL DIFFERENTIAL EQUATIONS

INVITED LECTURES

Local behavior of solutions of nonlinear parabolic equations <i>D. G. Aronson</i>	3
Nonlinear eigenvalue problems <i>Avner Friedman</i>	9
Plane waves of finite amplitude <i>Fritz John</i>	14
Existence of periodic solutions for some nonlinear hyperbolic partial differential equations <i>P. H. Rabinowitz</i>	20
L^p -Estimates ($1 < p \leq \infty$) near the boundary for solutions of the Dirichlet problem <i>E. B. Fabes and N. M. Rivière</i>	25
Existence theorems for some compressible boundary layer problems <i>James Serrin</i>	35

ABSTRACTS OF CONTRIBUTED PAPERS

Related well-posed and ill-posed problems in partial differential equations <i>J. W. Dettman</i>	45
The Cauchy-Kowalewski theorem and a singular initial value problem <i>B. A. Fusaro</i>	46
An existence proof for a boundary value problem arising in boundary layer theory <i>S. P. Hastings</i>	47
On the motion of a viscous incompressible fluid <i>S. Kaniel</i>	48
Boundary value and optimal problems concerned with various types of "polyvibrating" equations <i>D. Mangeron and M. N. Oguztöreli</i>	48
A note on the multiple time scale method in perturbation problems <i>Alan C. Newell</i>	49
Asymptotic solution of a nonlinear stability problem <i>B. J. Matkowsky</i>	49
Quantum scattering and asymptotic series <i>D. Sattinger</i>	51
Pseudoparabolic partial differential equations <i>R. E. Showalter and T. W. Ting</i>	51
Lyapunov stability of partial differential equations <i>Gabe Buis, Martin Eisen and W. G. Vogt</i>	52

Chapter 2**DELAY AND INTEGRAL EQUATIONS**

INVITED LECTURES

Admissibility with respect to an integral operator and applications	<i>C. Corduneanu</i>	55
A global prediction (or learning) theory for some nonlinear functional-differential equations	<i>Stephen Grossberg</i>	64
Behavior near a periodic orbit of functional differential equations	<i>Jack K. Hale</i>	71
Boundedness and oscillation of some Volterra and delay equations	<i>J. J. Levin</i>	76
The topological dynamics of Volterra integral equations	<i>R. K. Miller</i>	82

ABSTRACTS OF CONTRIBUTED PAPERS

A periodicity theorem for functional differential equations with applications	<i>R. B. Grafton</i>	91
On asymptotic behavior and periodic solutions of a certain Volterra integral equation	<i>Melvin L. Heard</i>	92
On the stability of integral manifolds for functional differential equations	<i>A. P. Stokes</i>	92
Uniqueness of the zero solution for state dependent delay differential equations	<i>Elliot Winston</i>	93

Chapter 3**DYNAMICAL SYSTEMS**

INVITED LECTURES

Isolated invariant sets and isolating blocks	<i>C. Conley and R. Easton</i>	97
Qualitative behavior for classical dynamical systems	<i>S. P. Diliberto</i>	105
The misbehavior of the solutions of a differential system near a periodic solution	<i>Lawrence Markus</i>	114
The existence of periodic solutions on two-manifolds	<i>Robert J. Sacker and George R. Sell</i>	117
Recurrence and almost periodicity in ordinary differential equations	<i>George Seifert</i>	119
Problems on capture and control in conservative dynamical systems	<i>Lawrence Markus and George R. Sell</i>	122
Extension theorems for flows without uniqueness	<i>G. P. Szegö</i>	125

ABSTRACTS OF CONTRIBUTED PAPERS

Singular points in products of semidynamical systems	<i>Prem N. Bajaj</i>	133
Local canonical forms for differential systems	<i>Courtney Coleman</i>	134

A flow near a degenerate critical point	<i>R. Easton</i>	137
Bridges in the restricted three-body problem		
..... <i>Kenneth R. Meyer and Julian Palmore</i>		137

Chapter 4**BEHAVIOR OF PERIODIC SOLUTIONS**

INVITED LECTURES

Functional analysis and differential equations	<i>Lamberto Cesari</i>	143
Some general methods for detecting the existence of periodic solutions	<i>D. C. Lewis</i>	156
Branching of periodic solutions of second order equations ...	<i>W. S. Loud</i>	159
Some remarks on the existence and the stability of almost periodic solutions	<i>Taro Yoshizawa</i>	166

ABSTRACTS OF CONTRIBUTED PAPERS

On periodic solutions of Hamiltonian systems of ordinary differential equations	<i>M. S. Berger</i>	175
On stabilization of periodic solutions of nonlinear systems .	<i>P. Brunovský</i>	175
On the limit cycles of $\ddot{y} - \mu \sin \dot{y} + y = 0$	<i>Craig Comstock</i>	175
Almost periodic solutions with module containment	<i>A. M. Fink</i>	177
A note on periodic solutions of Riccati-type equations.....	<i>D. A. Sanchez</i>	177

Chapter 5**FURTHER TOPICS IN ORDINARY DIFFERENTIAL EQUATIONS**

INVITED LECTURES

Set-valued mappings and differential equations	<i>H. A. Antosiewicz</i>	181
Holomorphic solutions of nonlinear differential equations at singular points	<i>W. A. Harris</i>	184
Existence and properties of solutions of $\dot{x} \in R(t, x)$	<i>Henry Hermes</i>	188
Perturbing asymptotically stable differential equations	<i>Aaron Strauss</i>	194

ABSTRACTS OF CONTRIBUTED PAPERS

Multivalued differential equations and ordinary differential equations	<i>Arrigo Cellina</i>	201
A technique for solving two-dimensional boundary value problems	<i>J. W. Bebernes and Russell Wilhelmsen</i>	202
Examples in the oscillation theory of higher order equations	<i>G. B. Gustafson</i>	203
Asymptotic expansions for singularly perturbed systems.....	<i>Frank Hoppensteadt</i>	203
Saddle point type behavior for nonautonomous second order almost linear systems of differential equations	<i>J. D. Schuur</i>	204
Some extensions of Lyapunov's second method	<i>James A. Yorke</i>	206
