

CONTENTS

<i>Preface</i>	ix
--------------------------	----

Chapter One – Scalar Riccati Differential Equations

1. Introduction	1
2. Related Linear Differential Systems	2
3. Notes and Remarks	7

Chapter Two – Basic Properties of Solutions of Riccati Matrix Differential Equations

1. Introduction	9
2. Related Riccati Equations and Linear Systems	10
3. Variation of Solutions	19
4. Transformations for (2.1) and (2.3 _M)	28
5. Associated Riccati Matrix Differential Equations	34
6. Normality and Abnormality	36
7. Distinguished Solutions of a Riccati Matrix Differential Equation	45
8. Generalized Linear Differential Systems and Riccati Matrix Integral Equations	49
9. A Class of Monotone Riccati Matrix Differential Operators	61
10. Results Related to the Perron–Frobenius Theorem	74
11. A Dissipative Property of Solutions of Riccati Matrix Differential Equations	77
12. Certain Results for Equation (2.1) for the Case $m = n$	84
13. Notes and Remarks	87
References	88

Chapter Three – Involutory Riccati Matrix Differential Equations

1. Basic Definitions and Preliminary Concepts	89
2. Examples of Involutory Systems	94
3. Properties of Solutions of Involutory Systems	99
4. Transformations for (1.2) and (1.3 _I)	104
5. Obverse Involutory Differential Systems	107
6. Notes and Remarks	108

Chapter Four – Hermitian Riccati Matrix Differential Equations

1. Introduction	109
2. Preliminary Properties of Solutions	110
3. Distinguished Solutions of (1.2)	115
4. Hermitian Riccati Equations Which Are Definite	118
5. A Fundamental Property of Solutions of Riccati Matrix Differential Equations	124
6. A Class of Monotone Matrix Differential Equations	129
7. Properties of Hermitian Systems (1.3 _l) Which Are Definite	134
8. Existence of a Principal Solution for an Hermitian System (1.3 _l)	153
9. Hermitian Systems with Constant Coefficients	160
10. A Matrix Method of Atkinson	162
11. Notes and Remarks	167
References	167

Chapter Five – Applications of Riccati Matrix Differential Equations

1. Introduction	169
2. Direct Applications	169
3. Applications Arising from Partial Differential Equations	172
4. An Introduction to Hamilton–Jacobi Theory	176
5. A Linear Regulator Problem	184
6. A Problem in Linear Filtering and Prediction Theory	195
7. The Mycielski–Paszkowski Diffusion Problem	197
8. The $*$ -Product of Redheffer	201
9. A Problem in Invariant Imbedding	203
10. Notes and Remarks	206
References	206

References	207
