Preface.	vii
Addition to the Preface.	xi
CHAPTER I. HISTORICAL PROLOGUE	
1. Introduction.	1
2. Methods Based Upon Variational Principles . . .	8
3. Historical Comments on Terminology.	21
CHAPTER II. STURMIAN THEORY FOR REAL LINEAR HOMOGENEOUS SECOND ORDER ORDINARY DIFFERENTIAL EQUATIONS ON A COMPACT INTERVAL	
1. Introduction.	24
2. Preliminary Properties of Solutions of (1.1). .	30
3. The Classical Oscillation and Comparison Theorems of Sturm	35
4. Related Oscillation and Comparison Theorems . .	41
5. Sturmian Differential Systems	45
6. Polar Coordinate Transformations.	53
7. Transformations for Differential Equations and Systems	62
8. Variational Properties of Solutions of (1.1). .	67
9. Comparison Theorems	80
10. Morse Fundamental Quadratic Forms for Conjugate and Focal Points.	86
11. Survey of Recent Literature	98
12. Topics and Exercises.	112
CHAPTER III. SELF-ADJOINT BOUNDARY PROBLEMS ASSOCIATED WITH SECOND ORDER LINEAR DIFFERENTIAL EQUATIONS	
1. A Canonical Form for Boundary Conditions. . . .	132
2. Extremum Problems for Self-Adjoint Systems. . .	140
3. Comparison Theorems	153
4. Comments on Recent Literature	160
5. Topics and Exercises.	162
CHAPTER IV. OSCILLATION THEORY ON A NON-COMPACT INTERVAL	
1. Introduction.	190
2. Integral Criteria for Oscillation and Non-Oscillation	190
3. Principal Solutions	192
4. Theory of Singular Quadratic Functionals. . . .	202
5. Interrelations Between Oscillation Criteria and Boundary Problems	216
6. Strong and Conditional Oscillation.	219
7. A Class of Sturmian Problems on a Non-Compact Interval.	221
8. Topics and Exercises.	226

CHAPTER V. STURMIAN THEORY FOR DIFFERENTIAL SYSTEMS

1. Introduction.	249
2. Special Examples.	253
3. Preliminary Properties of Solutions of (2.5).	257
4. Associated Riccati Matrix Differential Equations	267
5. Normality and Abnormality	271
6. Variational Properties of Solutions of (3.1).	279
7. Comparison Theorems	289
8. Morse Fundamental Hermitian Forms	297
9. Generalized Polar Coordinate Transformations for Matrix Differential Systems	308
10. Matrix Oscillation Theory	314
11. Principal Solutions	325
12. Comments on Systems (3.1) Which are Not Identically Normal.	335
13. Comments on the Literature on Oscillation Theory for Hamiltonian Systems (3.1).	340
14. Higher Order Differential Equations	343
15. Topics and Exercises.	350

CHAPTER VI. SELF-ADJOINT BOUNDARY PROBLEMS

1. Introduction.	386
2. Normality and Abnormality of Boundary Problems.	394
3. Self-Adjoint Boundary Problems Associated with (2)	396
4. Comparison Theorems	407
5. Treatment of Self-Adjoint Boundary Problems by Matrix Oscillation Theory.	410
6. Notes and Comments on the Literature.	422
7. Topics and Exercises.	427

CHAPTER VII. A CLASS OF DEFINITE BOUNDARY PROBLEMS

1. Introduction.	439
2. Definitely Self-Adjoint Boundary Problems	444
3. Comments on Related Literature.	460
4. Topics and Exercises.	464

CHAPTER VIII. GENERALIZATIONS OF STURMIAN THEORY

1. Introduction.	470
2. Integro-Differential Boundary Problems.	470
3. A Class of Generalized Differential Equations	474
4. Hestenes Quadratic Form Theory in a Hilbert Space	480
5. The Weinstein Method of Intermediate Problems	484
6. Oscillation Phenomena for Hamiltonian Systems in a B^* -Algebra	491
7. Topological Interpretations of the Sturmian Theorems.	500
