

CONTENTS

Series Editor's Foreword	ix
Preface	xi
List of Figures	xv
List of Tables	xvi
Chapter I Review of Ordinary Differential Equations	
1 Introduction	1
2 Existence and Uniqueness for Initial-Value Problems	1
3 Linearly Independent Solutions and Wronskians	6
4 The Sturmian Theory	8
5 Boundary-Value Problems	12
6 Green's Functions	15
7 Riccati Equations – Scalar Case	19
8 Riccati Equations – Matrix Case	22
9 Exercises	23
10 Bibliographical Discussion	26
Chapter II Review of Numerical Solution of Ordinary Differential Equations	
1 Introduction	28
2 Definitions and Notation	28
3 Taylor's Method	30
4 Runge-Kutta Methods	31
5 Multistep Methods	34
6 Stability	37
7 Inherent Instability and Backward Integration	38
8 Linear Boundary-Value Problems – Initial-Value Techniques	44

9	Linear Boundary-Value Problems – Boundary-Value Techniques	46
10	Exercises	52
11	Bibliographical Discussion	54
Chapter	III Introduction to Invariant Imbedding	
1	Introduction	56
2	Trajectory Analysis – Classical	57
3	Trajectory Analysis – Invariant Imbedding	58
4	Trajectory Analysis – More Realistic Models.	59
5	Particle Transport – Classical	61
6	Particle Transport – Invariant Imbedding	63
7	Particle Transport – Riccati Transformation	68
8	Particle Transport – Criticality	69
9	Exercises	70
10	Bibliographical Discussion	73
Chapter	IV Linear Boundary-Value Problems – Inhomogeneous	
1	Introduction	75
2	The Basic Invariant Imbedding Algorithm	75
3	Validation of the Basic Algorithm	78
4	An Analytical Example	80
5	Generalization of the Basic Algorithm	81
6	General Boundary Conditions	83
7	Inverse Riccati Transformations	83
8	Relationship to Green’s Functions	84
9	Particle Transport Revisited	88
10	The Method of Kagiwada and Kalaba	90
11	The Method of Kagiwada and Kalaba – Source Terms .	94
12	The Method of Kagiwada and Kalaba – Troubles . .	96
13	Numerical Examples	99
14	Exercises	109
15	Bibliographical Discussion	110
Chapter	V Linear Boundary-Value Problems – Homogeneous	
1	Introduction	112
2	The Characteristic Lengths and Their Calculation . .	118
3	An Analytical Example	123
4	Modification of the Boundary Conditions	124
5	Further Analytical Examples	130

6	Eigenfunctions	133
7	Results for Sturm-Liouville Systems	138
8	Singular Coefficients	140
9	Singular Intervals	144
10	Connections with Other Methods	145
11	Numerical Examples	146
12	Exercises	153
13	Bibliographical Discussion	153
Chapter VI	Linear Boundary-Value Problems – Inhomogeneous Equations Revisited	
1	Introduction	156
2	Alternative Theorem	156
3	Solutions on Intervals Greater than First Characteristic Length	158
4	Numerical Examples	161
5	Exercises	163
6	Bibliographical Discussion	164
Chapter VII	Linear Initial-Value Problems	
1	Introduction	165
2	Formal Results	166
3	Numerical Examples	168
4	Exercises	171
5	Bibliographical Discussion	172
Chapter VIII	Systems of Equations	
1	Introduction	174
2	Characteristic Lengths for n -th Order Systems	174
3	Modification of Boundary Conditions	177
4	An Analytical Example	180
5	Multiple Eigenfunctions	183
6	Inhomogeneous Equations	186
7	Numerical Examples	189
8	Exercises	195
9	Bibliographical Discussion	196
Chapter IX	Nonlinear Boundary-Value Problems	
1	Introduction	198
2	Classical Invariant Imbedding	199

3 Quasilinearization	201
4 Quasilinearization and Invariant Imbedding	204
5 Numerical Examples	205
6 Exercises	210
7 Bibliographical Discussion	211
Author Index	212
Subject Index	214
