# Contents

	Preface	vii
I	<b>Elements of Hilbert Space</b>	1
	1. Linear algebra	1
	2. Convergence and continuity	6
	3. Completeness	9
	4. Hilbert space	13
	5. Dual operators; identifications	17
	6. Uniform boundedness; weak compactness	20
	7. Expansion in eigenfunctions	22
	Exercises	25
II	<b>Distributions and Sobolev Spaces</b>	27
	1. Distributions	27
	2. Sobolev spaces	35
	3. Trace	40
	4. Sobolev's lemma and imbedding	43
	5. Density and compactness	46
	Exercises	49
III	<b>Boundary Value Problems</b>	51
	1. Introduction	51
	2. Forms, operators and Green's formula	53
	3. Abstract boundary value problems	57
	4. Examples	58
	5. Coercivity; elliptic forms	64
	6. Regularity	68
	7. Closed operators, adjoints and eigenfunction expansions	73
	Exercises	80
IV	<b>First Order Evolution Equations</b>	83
	1. Introduction	83
	2. The Cauchy problem	85

---

3. Generation of semigroups	88
4. Accretive operators; two examples	92
5. Generation of groups; a wave equation	96
6. Analytic semigroups	99
7. Parabolic equations	104
Exercises	109
<b>V Implicit Evolution Equations</b>	<b>113</b>
1. Introduction	113
2. Regular equations	113
3. Pseudoparabolic equations	117
4. Degenerate equations	121
5. Examples	123
Exercises	127
<b>VI Second Order Evolution Equations</b>	<b>129</b>
1. Introduction	129
2. Regular equations	130
3. Sobolev equations	137
4. Degenerate equations	139
5. Examples	142
Exercises	149
<b>VII Optimization and Approximation Topics</b>	<b>151</b>
1. Dirichlet's principle	151
2. Minimization of convex functions	152
3. Variational inequalities	157
4. Optimal control of boundary value problems	161
5. Approximation of elliptic problems	168
6. Approximation of evolution equations	175
Exercises	181
Appendix I: Suggested Reading	185
Appendix II: Bibliography	187
Symbols	191
Index	194
