

TABLE OF CONTENTS

PREFACE	v
CHAPTER 1. ASYMPTOTIC SEQUENCES AND ASYMPTOTIC DEVELOPMENT OF A FUNCTION	
1.1. Notation and Definition	1
1.2. Operations with Asymptotic Expansions	11
Asymptotic Integration	17
Differentiation	21
1.3. Some Remarks on the Use of Asymptotic Expansions . . .	24
1.4. Summation of Asymptotic Expansions	28
CHAPTER 2. THE ASYMPTOTIC DEVELOPMENT OF A FUNCTION DEFINED BY AN INTEGRAL	
2.1. Elementary Analytic Methods	38
Analytic Continuation of Functions Defined by an Integral	38
Integration by Parts	40
Asymptotic Evaluation of Indefinite Integrals	44
Asymptotic Evaluation of Integrals of the Form $\int_x^{\infty} f(x,t)dt$	54
2.2. Laplace and Fourier Transforms at Infinity	62
Watson's Lemma	65
Fourier Integrals	74
2.3. Laplace's Formula and Its Generalization	80
2.4. Kelvin's Formula and Generalizations	86
2.5. Integrals of the Type $\int_{\alpha(x)}^{\beta(x)} G(x,t)dt$	95
Generalized Laplace Formula	96
Generalized Kelvin's Formula	100
Dispersive Wave Propagation	102
2.6. Method of Steepest Descents and the Saddle Point Formula	105
Saddle Point Method for a Complex Large Parameter	115
The Complete Asymptotic Development	117
Application to Bessel Functions	122
2.7. Applications of the Saddle Point Method	126
The Airy Integral	126

A Generalization of the Airy Integral	134
2.8. Multidimensional Integrals: Part I. Laplace, Kelvin, and Related Formulas	136
2.9. Multidimensional Integrals: Part II. Many Parameters	148
Complete Asymptotic Development	155
2.10. Asymptotic Evaluation of Integrals Involving Non-Uniformities :	164
Integrals Containing a Global Maximum Near an Endpoint	165
Neighboring Saddle Points	170
2.11. Miscellaneous	176
Laplace Transforms in the Neighborhood of the Origin	176
Fourier Transforms at the Origin	181
Bromwich Integrals at Infinity	182
Bromwich Integrals at the Origin	186

CHAPTER 3. LINEAR ORDINARY DIFFERENTIAL EQUATIONS

3.0. Introduction	189
3.1. Some Topics in Matrix Analysis	192
Applications to Ordinary Differential Equations	195
3.2. Matrix Theory - Continued	201
Functions of Matrices	207
Dunford-Taylor Integral	210
Construction of a Function of a Matrix	211
3.3. Linear Ordinary Differential Equations with Constant Coefficients	219
3.4. Classification and General Properties of Ordinary Differential Equations in the Neighborhood of Singular Points	226
Circuit Relations	230
Singular Points of an n^{th} Order Scaler Ordinary Differential Equations	232
Solutions in the Neighborhood of Infinity	234
The Equation $z \frac{d\mathbf{X}}{dz} = \mathbf{A} \mathbf{X}$	235
3.5. Linear Ordinary Differential Equations with Regular Singular Points	240
The Case of a Scaler Ordinary Differential Equation with a Regular Singular Point	254
Method of Frobenius	256
3.6. Irregular Singular Points	259

Scaler Ordinary Differential Equations	278
Second Order Equations	284
3.7. Ordinary Differential Equations Containing a Large Parameter	289
Formal Solution	289
Turning or Transition Points	292
Connection Formulas	294
Langer's Uniform Method	296
READING LIST	300
INDEX	301
