

## TABLE OF CONTENTS

	<u>page</u>
Chapter 1 Background Information	1
1.1 Significant figures and round-off error	1
1.2 Computers and floating-point arithmetic	5
1.3 Complex numbers	6
1.4 Inequalities for numbers	7
1.5 Convergence of a sequence of numbers	7
1.6 Polynomials and their roots	8
1.7 Systems of linear equations	9
1.8 The Vandermonde matrix	15
1.9 Continuous functions; piecewise continuous functions	15
1.10 Mean value theorem and Rolle's theorem	16
1.11 Convergence of a sequence of functions	16
1.12 The chain rule for derivatives	17
1.13 Definite integrals and Riemann sums	18
1.14 Linear transformation of one interval onto another	19
1.15 Change of variables in an integral	20
1.16 Mean value theorem for integrals	21
1.17 Inequalities for integrals	21
1.18 The class of functions $W^m[M_m; a, b]$	22
1.19 The function $(x - t)_+^k$	23
1.20 Taylor's formula with integral form of remainder	24
1.21 Taylor's formula with usual form of remainder	28
1.22 Taylor's formula for functions of two variables	29
1.23 Difference equations	30
1.24 Linear difference equations with constant coefficients	31
1.25 Linear functionals	37
1.26 Tri-diagonal linear systems	39
References for Chapter 1	42

	<u>page</u>
Chapter 2 Interpolation	43
2.1 Existence of interpolating polynomials	43
2.2 Construction of the interpolating polynomial by solution of a linear system	49
2.3 One form for the error in the interpolation	51
2.4 Convergence of a sequence of interpolations	56
2.5 The Weierstrass approximation theorem	61
2.6* Iterated interpolation	63
2.7* Peano estimates for the error in interpolation	69
2.8* Interpolation by rational functions	82
2.9* Interpolation by cubic spline functions	95
2.10* Additional reading	103
References for Chapter 2	104
 Chapter 3 Quadrature	 106
3.1 Introductory remarks and definitions	106
3.2 Existence of formulas exact for polynomials	107
3.3 Newton-Cotes formulas and their properties	111
3.4 Linear transformations of formulas	116
3.5 Repeated trapezoidal formula; repeated midpoint formula; repeated Simpson's formula	119
3.6 Introduction to Gauss formulas	122
3.7 Orthogonal polynomials and their zeros	126
3.8 Existence of Gauss formulas	135
3.9 Convergence of a sequence of Gauss formulas for a continuous integrand	142
3.10 Introduction to Romberg formulas	145
3.11 Romberg formulas and their properties	153
3.12 Peano error estimates for quadrature formulas	163
3.13 Gauss-Legendre formulas are Riemann sums	183
3.14 The merits of Gauss-Legendre formulas	185

	<u>page</u>
3.15* Formulas exact for trigonometric polynomials	188
3.16* Numerical integration by rational extrapolation	192
3.17* Numerical integration by cubic splines	199
3.18* Additional reading	203
References for Chapter 3	204
 Chapter 4 Initial Value Problems for Ordinary Differential Equations	 207
4.1 Introduction	207
4.2 Taylor's series methods	210
4.3 Convergence of Taylor's series methods	217
4.4 Runge-Kutta methods	219
4.5 Derivation of Runge-Kutta methods	230
4.6 The need for automatic choice of stepsize; the earth-moon-spaceship problem	232
4.7 Runge-Kutta methods with automatic choice of stepsize; methods of Zonneveld	243
4.8 Explicit multistep methods or predictor methods	254
4.9 Implicit multistep methods or corrector methods	262
4.10 Practical use of corrector methods; predictor- corrector methods	267
4.11 Stability of multistep methods for $y' = \lambda y$	270
4.12* Stability of multistep methods for general equations	288
4.13* A method based on the midpoint formula and rational extrapolation	291
4.14* Additional reading	301
References for Chapter 4	302
 Appendix A Tables of Orthogonal Polynomials	 305
 Appendix B Tables of Peano Error Constants for Various Quadrature Formulas	 311
 Appendix C Tables of Quadrature Formulas	 319
Subject Index	327
Index of Symbols	335
