

## TABLE OF CONTENTS

Preface	VII
Acknowledgements	XI
<b>Introduction</b>	
§ 0. Terminology and Notation . . . . .	1
§ 1. Vector Spaces with Convergence Defined by a Sequence of Semi-Norms. Spaces of Continuous Linear Function- als . . . . .	10
1. The Banach–Steinhaus Theorem . . . . .	10
2. Note on Topological Vector Spaces with Topology Defined by a Sequence of Semi-Norms . . . . .	17
3. Subspaces of $\mathcal{M}'$ . The Hahn–Banach Theorem . . . . .	18
<b>Chapter I. Elements of the Theory of Distributions</b>	
§ 2. Test Functions and Regularization . . . . .	22
1. The Support of a Function; Test Functions . . . . .	22
2. The Space $\mathcal{L}_p$ . . . . .	23
3. Regularization of Functions and the Approximation Theorem . . . . .	25
4. Partition of Unity . . . . .	29
§ 3. Basic Definitions of the Theory of Distributions . . . . .	32
1. The Spaces $\mathcal{D}_K$ and $(\mathcal{D}_K)'$ . . . . .	32
2. The Set $\mathcal{D}'$ of Distributions . . . . .	34
3. The Vector Space $\mathcal{D}'$ . The Convergence of a Sequence of Distributions . . . . .	38
4. Distributions Viewed upon as a Generalization of Lo- cally Integrable Functions . . . . .	39
5. The Spaces $\mathcal{D}^m$ and $(\mathcal{D}^m)'$ . . . . .	42
6. Extension of Distributions . . . . .	44
§ 4. Differentiation of Distributions. Pseudo-Functions . . . . .	48

TABLE OF CONTENTS

1. Differentiation of Distributions . . . . .	48
2. Pseudo-Functions. Finite Parts . . . . .	53
§ 5. Sequences of Type $\delta$ . . . . .	58
§ 6. Certain Mappings of $\mathcal{D}'$ into $\mathcal{D}'$ . . . . .	64
1. Multiplication of a Distribution by a Function of Class $C^\infty$ . . . . .	64
2. Substitution in Distributions . . . . .	65
§ 7. The Space $\mathcal{E}'$ of Distributions with Bounded Supports . . . . .	69
§ 8. Approximation of Functions in the Space $\mathcal{D}(E^{m+n})$ . . . . .	79
§ 9. Generalization of Integrals Depending on a Parameter . . . . .	84
§ 10. The Primitives of a Distribution . . . . .	89
§ 11. Distributions Regarded as the Derivatives of Continuous Functions . . . . .	93
§ 12. Distribution-Valued Functions . . . . .	99
1. Continuous Distribution-Valued Functions and Distributions Induced by such Functions . . . . .	99
2. Distribution-Valued Functions of Class $C^k$ and Distributions Induced by such Functions . . . . .	103
§ 13. Operation of Fixing Variables in a Distribution . . . . .	110
§ 14. The Tensor Product of Distributions . . . . .	116
§ 15. Convolution of Distributions . . . . .	122
1. Definition and the Existence Theorem . . . . .	122
2. Convolution in the Case where One of the Factors Is a Function . . . . .	126
3. Basic Properties of Convolution . . . . .	130
4. The Support of a Convolution . . . . .	131
5. The Continuity of Convolution. Differentiation with Respect to a Parameter . . . . .	132
§ 16. Series of Distributions. Periodic Distributions on $E^1$ . . . . .	136
1. Series of Distributions in $E^n$ . . . . .	136
2. Periodic Distributions on $E^1$ . . . . .	138
<b>Chapter II. Fourier Transformation. Tempered Distributions</b>	
§ 17. Fourier Transformation in the Class $\mathcal{S}$ of Rapidly Decreasing Functions . . . . .	140
1. Definition of the Class $\mathcal{S}$ and the Fourier Transformation $F$ on $\mathcal{S}$ . . . . .	140

TABLE OF CONTENTS

2. The Fourier Transform of the Derivative. The Continuity and Invertibility of $F$ on $\mathcal{S}$ . . . . .	142
3. Fourier Transformation on $\mathcal{L}_2$ . . . . .	147
4. Convergence in $\mathcal{S}$ and Convergence in $\mathcal{D}$ . . . . .	148
5. The Partial Fourier Transform (with Respect to a System of Variables) . . . . .	150
6. The Space $\mathcal{O}_M$ . . . . .	152
<b>§ 18. The Space <math>\mathcal{S}'</math> of Tempered Distributions . . . . .</b>	<b>155</b>
1. Definition of $\mathcal{S}'$ and the Embedding of $\mathcal{S}'$ in $\mathcal{D}'$ . . . . .	155
2. The Spaces $\mathcal{P}_k^m$ and $(\mathcal{P}_k^m)'$ . . . . .	158
3. Examples of Tempered Distributions . . . . .	159
4. Mappings of $\mathcal{S}'$ into $\mathcal{S}'$ . . . . .	163
5. Convolution of Tempered Distributions . . . . .	164
6. Generalizations of the Theorem on the Change of Order of Integration . . . . .	167
<b>§ 19. Operation of Tempered Fixing Variables in a Distribution</b> . . . . .	<b>173</b>
1. Definition and Examples . . . . .	173
2. Tempered Distributions Induced by Distribution-Valued Functions . . . . .	176
3. The Section of the Convolution of Two Distributions Induced by Distribution-Valued Functions . . . . .	181
<b>§ 20. Fourier Transformation in the Class <math>\mathcal{S}'</math> . . . . .</b>	<b>190</b>
1. Definition of the Fourier Transform of a Tempered Distribution . . . . .	190
2. Isomorphisms and Homeomorphisms Defined by $F$ . . . . .	191
3. Fourier Transformation on $\mathcal{L}_1$ and $\mathcal{L}_2$ . . . . .	194
4. The Fourier Transform of a Distribution with Bounded Support and the Fourier Transform of a Convolution . . . . .	196
5. The Partial Fourier Transform (with Respect to a System of Variables) . . . . .	198
6. The Fourier Transform of the Tensor Product . . . . .	199
7. The Fourier Transform of the Substitution . . . . .	200
<b>§ 21. Computation of Certain Fourier Transforms . . . . .</b>	<b>204</b>
1. The Fourier Transforms of the Dirac Distribution and Its Derivatives . . . . .	204

## TABLE OF CONTENTS

2. The Inverse Fourier Transform of the Function $x \mapsto \operatorname{sinc} x t/ x $ Depending on the Parameter $t \in E^1$ . . . . .	205
3. The Inverse Fourier Transform of the Function $x \mapsto e^{-ic x ^2}$ , $c > 0$ . . . . .	208
4. The Inverse Fourier Transform of the Function $x \mapsto 1/ x ^2$ in $E^3$ and $E^2$ . . . . .	210
5. The Fourier Transform of the Heaviside Function . . . . .	214
§ 22. The Role of the Fourier Transformation in Differential Equations with Constant Coefficients . . . . .	216
1. The Fourier Transform of the Derivative of a Distribution . . . . .	216
2. Application of the Fourier Transformation in Differential Equations . . . . .	218
3. Application of the Partial Fourier Transformation . . . . .	222
4. Information about the Division Problem . . . . .	223
§ 23. The Fourier Transform of Periodic Distributions . . . . .	229
<b>Chapter III. Linear Differential Equations</b>	
§ 24. Definitions and Methods . . . . .	237
1. The Adjoint Operator . . . . .	237
2. Connection between Distributional Solutions and Classical Solutions . . . . .	239
3. Fundamental Solutions . . . . .	243
4. The Method of Descent . . . . .	245
5. Transformation of a Differential Equation by Substitution . . . . .	251
6. Note on Systems of Differential Equations . . . . .	254
7. Hypoelliptic and Analytic-Hypoelliptic Operators . . . . .	255
§ 25. Ordinary Differential Equations with a Parameter . . . . .	261
§ 26. Differential Equations Solved with Respect to the Highest Order Derivative of One of the Variables . . . . .	267
1. The Theorem on the Class of Regularity of Solutions with Respect to the Distinguished Variable . . . . .	267
2. Distributional Initial Value Problems . . . . .	274
<b>Chapter IV. The Wave Equation</b>	
§ 27. The Wave Operator $\square_n$ . Initial Value Problems . . . . .	286

TABLE OF CONTENTS

§ 28. Solution of the Initial Value Problem for the Equation $\square_3 u = 0$ and a Fundamental Solution of the Operator $\square_3$	290
1. Solution of the Distributional Initial Value Problem for the Equation $\square_3 u = 0$	290
2. Solution of the Classical Initial Value Problem for the Equation $\square_3 u = 0$	299
3. Fundamental Solution of the Operator $\square_3$	303
4. Solution of Problem $S_+$ for the Operator $\square_3$	304
5. Uniqueness of Solution of the Distributional Initial Value Problem for the Operator $\square_3$	307
§ 29. Solution of the Initial Value Problem for the Equation $\square_3 u = f$	310
1. Solution of the Distributional Initial Value Problem	310
2. Solution of the Classical Initial Value Problem	314
§ 30. The Equation of Vibrating Membrane	322
§ 31. The Equation of Vibrating String	331
 Chapter V. The Heat Equation and Schrödinger Equation	
§ 32. Solution of the Distributional Initial Value Problem for the Homogeneous Heat Equation	339
§ 33. Distributional Initial Value Problem for the Non-Homo- geneous Heat Equation	350
1. Fundamental Solution. Regularity of Solutions of the Heat Equation	350
2. Distributional Initial Value Problem for the Non- Homogeneous Heat Equation	352
§ 34. Uniqueness of Solution of the Initial Value Problem for the Heat Equation in the Class $\mathcal{S}'$	357
§ 35. Certain Classical Topics Concerning the Heat Equation	363
1. Existence of Solution of the Classical Initial Value Problem	363
2. The Extremum Principle	367
3. The Classical Uniqueness Theorem for the Initial Value Problem	368
§ 36. Schrödinger's Equation	371

## TABLE OF CONTENTS

### Chapter VI. Laplace, Poisson and Helmholtz Equations

§ 37. Laplace Equation. Distributions Invariant with Respect to Rotations . . . . .	375
1. Harmonic Distributions and Functions . . . . .	375
2. Spherical Averaging . . . . .	381
3. Homogeneous Distributions Invariant with Respect to Rotations . . . . .	385
§ 38. Fundamental Solution of the Laplace Operator . . . . .	388
1. Fundamental Solution of the Operator $\Delta_n$ for $n \geq 3$ . . . . .	388
2. Fundamental Solutions of the Operators $\Delta_2$ and $\Delta_1$ . . . . .	391
3. Hypoellipticity of the Operator $\Delta_n$ . . . . .	392
4. An Application of Green's Formula . . . . .	392
§ 39. Properties of Harmonic Functions . . . . .	396
1. The Extremum Principle . . . . .	396
2. The Potential of a Single Layer and a Double Layer . . . . .	398
3. Analyticity of Harmonic Functions . . . . .	402
4. Removable Singularities of Harmonic Functions . . . . .	405
§ 40. Poisson's Equation . . . . .	407
1. Poisson's Equation in a Distributional Setting . . . . .	407
2. Differentiation of an Integral with Respect to a Parameter . . . . .	410
3. Poisson's Theorem . . . . .	413
§ 41. The Helmholtz Operator . . . . .	420
1. Fundamental Solution of the Helmholtz Operator for $n = 3$ . . . . .	420
2. Fundamental Solution of the Helmholtz Operator for $n = 1$ . . . . .	422
3. Properties of Solutions of the Helmholtz Equation . . . . .	423
§ 42. Half-Space Problem for the Laplace Equation . . . . .	424
1. The Distributional Half-Space Problem . . . . .	424
2. The Classical Half-Space Problem . . . . .	438
§ 43. The Dirichlet Problem for the Laplace Equation in the Disc . . . . .	442
1. Notation and Introductory Information . . . . .	442
2. The Distributional Dirichlet Problem for the Laplace Equation . . . . .	445

TABLE OF CONTENTS

3. Information About the Dirichlet Problem for a Domain $\Omega \subset E^n$ . . . . .	458
 Appendix. Fundamental Solution of the Wave Operator	
Part I. The Group $G$ of Proper Lorentz Transformations and $G$ -Invariant Distributions (by <i>B. Ziemian</i> ) . . . . .	464
Part II. Fundamental Solution $E_n$ of the Operator $\square_n = \frac{\partial^2}{\partial t^2} - \Delta_n$ for $n > 3$ (by <i>Z. Szmydt</i> and <i>B. Ziemian</i> ) . . . . .	472
1. Explicit Formulae for the Fundamental Solution $E_{2m}$ , $m \in N$ , $m \geq 2$ , Determined up to a Constant Factor $C_{2m}$ . . . . .	472
2. Explicit Formulae for the Fundamental Solution $E_{2m+1}$ , $m \in N$ , $m \geq 1$ , Determined up to a Constant Factor $C_{2m+1}$ . . . . .	480
3. An Application of the Method of Descent for finding the Con- stants $C_n$ , $n > 3$ . . . . .	481
4. A Uniqueness Theorem for the Distributional Initial Value Problem for the Wave Operator . . . . .	482
 Bibliography . . . . .	484
List of Symbols . . . . .	487
Name Index . . . . .	494
Subject Index . . . . .	495
