CHAPTER I

The Basic Examples of Linear PDEs and Their Fundamental Solutions

1. The Basic Examples of Linear PDEs	3
2. Existence and Smoothness of Solutions Not Submitted to Side Conditions	14
3. Analyticity of Solutions	22
4. Fundamental Solutions of Ordinary Differential Equations	26
5. Fundamental Solutions of the Cauchy–Riemann Operator	34
6. Fundamental Solutions of the Heat and of the Schrödinger Equations	41
7. Fundamental Solutions of the Wave Equation	47
8. More on the Supports and Singular Supports of the Fundamental Solutions of the Wave Equation	59
Appendix. Explicit Formulas for E_+ in Space Dimensions Two and Three	62
9. Fundamental Solutions of the Laplace Equation	68
Appendix. Computation of the Area of the Unit Sphere	74
10. Green’s Formula. The Mean Value Theorem and the Maximum Principle for Harmonic Functions. The Poisson Formula. Harnack’s Inequalities	77

CHAPTER II

The Cauchy Problem

11.	The Cauchy Problem for Linear Ordinary Differential Equations	89
12.	The Cauchy Problem for Linear Partial Differential Equations. Preliminary Observations	96
13.	The Global Cauchy Problem for the Wave Equation. Existence and Uniqueness of the Solutions	102
14.	Domain of Influence, Propagation of Singularities, Conservation of Energy	111
15.	Hyperbolic First-Order Systems with Constant Coefficients	119
16.	Strongly Hyperbolic First-Order Systems in One Space Dimension	132
17.	The Cauchy–Kovalevska Theorem. The Classical and Abstract Versions	142
18.	Reduction of Higher Order Systems to First-Order Systems	156
19.	Characteristics. Invariant Form of the Cauchy–Kovalevska Theorem	161
	Appendix. Bicharacteristics and the Integration of the Characteristic Equation	167
20.	The Abstract Version of the Holmgren Theorem	174
21.	The Holmgren Theorem	181

CHAPTER III

Boundary Value Problems

22.	The Dirichlet Problem. The Variational Form	189
23.	Solution of the Weak Problem. Coercive Forms. Uniform Ellipticity	201
24.	A More Systematic Study of the Sobolev Spaces	210
	Appendix. The Sobolev Inequalities	217
25.	Further Properties of the Spaces H^s	224
26.	Traces in $H^m(\Omega)$	237
	Appendix. Extension to \mathbf{R}^n of Elements of $H^{m,p}(\Omega)$	245
27.	Back to the Dirichlet Problem. Regularity up to the Boundary	249
28.	A Weak Maximum Principle	259
29.	Application: Solution of the Classical Dirichlet Problem	268
30.	Theory of the Laplace Equation: Superharmonic Functions and Potentials	278
31.	Laplace Equation and the Brownian Motion	294

32. Dirichlet Problems in the Plane. Conformal Mappings	306
33. Approximation of Harmonic Functions by Harmonic Polynomials in Three Space. Spherical Harmonics	314
34. Spectral Properties and Eigenfunction Expansions	322
35. Approximate Solutions to the Dirichlet Problem. The Finite Difference Method	332
36. Gårding's Inequality. Dirichlet Problem for Higher Order Elliptic Equations	347
37. Neumann Problem and Other Boundary Value Problems (Variational Form)	354
38. Indications on the General Lopatinski Conditions	367

CHAPTER IV

Mixed Problems and Evolution Equations

39. Functions and Distributions Valued in Banach Spaces	381
40. Mixed Problems. Weak Form	391
41. Energy Inequalities. Proof of Theorem 40.1 : Existence and Uniqueness of the Weak Solution to the Parabolic Mixed Problem	401
42. Regularity of the Weak Solution with Respect to the Time Variable	408
43. The Laplace Transform	416
44. Application of the Laplace Transform to the Solution of Parabolic Mixed Problems	424
45. Rudiments of Continuous Semigroup Theory	436
46. Application of Eigenfunction Expansion to Parabolic and to Hyperbolic Mixed Problems	449
47. An Abstract Existence and Uniqueness Theorem for a Class of Hyperbolic Mixed Problems. Energy Inequalities	458
