

Contents

Chapter I.	Some Basic Properties of Linear Differential Equations in the Complex Domain	1
	1. Preparatory Remarks	1
	2. The Basic Existence Theorem and its Consequences .	3
	3. Circuit Relations About Singular Points	9
Chapter II.	Regular Singular Points	17
	4. Method of Solution	17
	5. Solutions at a Regular Singular Point	20
Chapter III.	Asymptotic Power Series	30
	6. Introductory Remarks on Irregular Singular Points .	30
	7. Definition of Asymptotic Power Series	31
	8. Elementary Properties of Asymptotic Series	33
	9. The Existence of Asymptotic Series	39
Chapter IV.	Irregular Singular Points	49
	10. Introduction	49
	11. Formal Simplification	52
	12. Analytic Simplification and Asymptotic Solution .	55
	13. Miscellaneous Remarks	61
	14. Proof of the Main Asymptotic Existence Theorem when all Eigenvalues are Distinct.	65
	15. The Stokes Phenomenon	76
Chapter V.	Generalizations by Means of Jordan's Canonical Form .	88
	16. Jordan's Canonical Form	88
	17. Solutions at Regular Singular Points: General Case .	94
	18. Proof of Theorem 12.1: General Case	99
	19. Asymptotic Solution at an Irregular Singularity: General Case	100

Chapter VI.	Some Special Asymptotic Methods	116
	20. Introduction	116
	21. Calculating Asymptotic Expansions from Convergent Power Series	117
	22. Solution by Laplace Contour Integrals	123
	23. The Saddlepoint Method	127
Chapter VII.	Asymptotic Expansions with Respect to a Parameter	134
	24. Introduction	134
	25. Formal Theory	137
	26. Analytic Simplification	143
	27. Proof of Theorem 26.1	147
	28. Shearing Transformations	151
Chapter VIII.	Turning Point Problems	157
	29. Problems Reducible to Airy's Equation: Formal Theory	157
	30. Problems Reducible to Airy's Equation: Analytic Theory	169
	31. Short Report on Other Turning Point Problems	183
Chapter IX.	Nonlinear Equations	195
	32. Introduction	195
	33. Solution by Asymptotic Power Series	198
	34. Transformation into a Linear Differential Equation	200
	35. Solution by Exponential Series	211
	36. Nonlinear Equations with a Parameter	215
Chapter X.	Singular Perturbations	226
	37. Boundary Value Problems for Linear Equations	226
	38. Boundary Value Problems for Linear Equations: The Method of Višik and Lyusternik	235
	39. Initial Value Problems for Nonlinear Equations: Qualitative Theory	247
	40. Series Expansions for the Initial Value Problem	258
	41. Nonlinear Two-Point Boundary Value Problems	277
	42. Decomposition of General Linear Systems of Singular Perturbation Type	285
	43. Periodic Solutions of Singular Perturbation Problems: General Remarks	297
	44. Periodic Solutions of Singular Perturbation Problems: Linear Theory	303
	45. Series Expansions for Periodic Solutions of Singular Perturbation Problems	313

CONTENTS

ix

Chapter XI.	Integration of Differential Equations by Factorial Series	323
	46. Factorial Series and Laplace Integrals	323
	47. Solution of Differential Equations of Rank One by Factorial Series	332
	48. Remarks on the Solution of Differential Equations of Higher Rank by Factorial Series	340
Bibliography	345
Subject Index	357
