Contents

Preface v

Chapter I Historical Introduction

1.1. Early Asymptotic Theory Without Turning Points 1
1.2. Total Reflection and Turning Points 3
1.3. Hydrodynamic Stability and Turning Points 5
1.4. The So-Called WKB Method 7
1.5. The Contribution of R. E. Langer 8
1.6. Remarks on Recent Trends 9

Chapter II Formal Solutions

2.1. Introduction 11
2.2. The Jordan Form of Holomorphic Functions 13
2.3. A Formal Block Diagonalization 16
2.4. Parameter Shearing: Its Nature and Purpose 22
2.5. Simplification by a Theorem of Arnold 24
2.6. Parameter Shearing: Its Application 26
2.7. Parameter Shearing: The Exceptional Case 29
2.8. Formal Solution of the Differential Equation 31
2.9. Some Comments and Warnings 34

Chapter III Solutions Away From Turning Points

3.1. Asymptotic Power Series: Definition of Turning Points 37
3.2. A Method for Proving the Analytic Validity of Formal Solutions: Preliminaries 40

3.3. A General Theorem on the Analytic Validity of Formal Solutions 42
3.4. A Local Asymptotic Validity Theorem 44
3.5. Remarks on Points That Are Not Asymptotically Simple 48

Chapter IV Asymptotic Transformations of Differential Equations

4.1. Asymptotic Equivalence 51
4.2. Formal Invariants 54
4.3. Formal Circuit Relations with Respect to the Parameter 58

Chapter V Uniform Transformations at Turning Points: Formal Theory

5.1. Preparatory Simplifications 65
5.2. A Method for Formal Simplification in Neighborhoods of a Turning Point 69
5.3. The Case $h > 1$ 74
5.4. The General Theory for $n = 2$ 79

Chapter VI Uniform Transformations at Turning Points: Analytic Theory

6.1. Preliminary General Results 85
6.2. Differential Equations Reducible to Airy's Equation 91
6.3. Differential Equations Reducible to Weber's Equation 98
6.4. Uniform Transformations in a Full Neighborhood of a Turning Point 102
6.5. Complete Reduction to Airy's Equation 104
6.6. Reduction to Weber's Equation in Wider Sectors 109
6.7. Reduction to Weber's Equation in a Full Disk 116

Chapter VII Extensions of the Regions of Validity of the Asymptotic Solutions

7.1. Introduction 121
7.2. Regions of Asymptotic Validity Bounded by Separation Curves: The Problem 122
7.3. Solutions Asymptotically Known in Sectors Bounded by Separation Curves 126
7.4. Singularities of Formal Solutions at a Turning Point 128
7.5. Asymptotic Expansions in Growing Domains 131
7.6. Asymptotic Solutions in Expanding Regions: A General Theorem 135
7.7. Asymptotic Solutions in Expanding Regions: A Local Theorem 138

Chapter VIII Connection Problems

8.1. Introduction 140
8.2. Stretching and Parameter Shearing 142
8.3. Calculation of the Restraint Index 146
8.4. Inner and Outer Solutions for a Particular nth-Order System 150
8.5. Calculation of a Central Connection Matrix 155
8.6. Connection Formulas Calculated Through Uniform Simplification 158

Chapter IX Fedoryuk's Global Theory of Second-Order Equations

9.1. Global Formal Solutions of $\epsilon^2 u'' = a(x)u$ 164
9.2. Separation Curves for $\epsilon^2 u'' = a(x)u$ 166
9.3. A Global Asymptotic Existence Theorem for $\epsilon^2 u'' = a(x)u$ 173

Chapter X Doubly Asymptotic Expansions

10.1. Introduction 180
10.2. Formal Solutions for Large Values of the Independent Variable 182
10.3. Asymptotic Solutions for Large Values of the Independent Variable 185
10.4. Some Properties of Doubly Asymptotic Solutions 190
10.5. Central Connection Problems in Unbounded Regions 194

Chapter XI A Singularly Perturbed Turning Point Problem

11.1. The Problem 197
11.2. A Simple Example 199
11.3. The General Case: Formal Part 204
11.4. The General Case: Analytic Part 208

Chapter XII Appendix: Some Linear Algebra for Holomorphic Matrices

12.1. Vectors and Matrices of Holomorphic Functions 215
12.2. Reduction to Jordan Form 221
12.3. General Holomorphic Block Diagonalization 226
12.4. Holomorphic Transformation of Matrices into Arnold's Form 228
