Preface

Chapter 0. Prerequisite Knowledge	1
0.1 Monotone classes	1
0.2 Uniform integrability	4
0.3 Conditional expectation and its generalization	6
0.4 Stochastic processes and stopping times	14
0.5 Martingales and stochastic integration	40
Chapter 1. Stochastic Differential Equations, Existence and Uniqueness of Solutions	51
1.1 Introduction	51
1.2 The space ϕ^P and the semimartingale space H^P	52
1.3 Existence and uniqueness of the solution of a stochastic differential equation	56
1.4 The general existence and uniqueness theorem	63
1.5 Extension of the results in the previous two sections	76
Chapter 2. Linear Stochastic Differential Equations	79
2.1 Introduction	79
2.2 One-dimensional linear stochastic differential equations	80
2.3 n-Dimensional homogeneous linear stochastic differential equations	83
2.4 n-Dimensional nonhomogeneous linear stochastic differential equations	88
2.5 A concrete method for obtaining the solution to special nonhomogeneous linear differential equations	92
2.6 Supplement to general linear stochastic differential equations	95

Chapter 3. Stability of Stochastic Systems	112
3.1 Review of the stability method for ordinary differential equations	112
3.2 The main concepts of stochastic stability	114
3.3 Relations between various stabilities	119
3.4 Stability of solutions of more general stochastic differential equations	126
References	140
