# Contents

| | | |
|---|---|---|
| | Introduction | ix |
| O. | Fundamental Not(at)ions | |
| | Sets, functions, physical background | 1 |
| I. | Real Vector Spaces | |
| | 1. Spaces | 23 |
| | Subspace geometry, components | |
| | 2. Maps | 31 |
| | Linearity, singularity, matrices | |
| | 3. Operators | 43 |
| | Projections, eigenvalues, determinant, trace | |
| II. | Affine Spaces | |
| | 1. Spaces | 59 |
| | Tangent vectors, parallelism, coordinates | |
| | 2. Combinations of points | 66 |
| | Midpoints, convexity | |
| | 3. Maps | 71 |
| | Linear parts, translations, components | |
| III. | Dual Spaces | |
| | 1. Contours, co- and contravariance, dual basis | 77 |
| IV. | Metric Vector Spaces | |
| | 1. Metrics | 87 |
| | Basic geometry and examples, Lorentz geometry | |
| | 2. Maps | 105 |
| | Isometries, orthogonal projections and complements, adjoints | |
| | 3. Coordinates | 110 |
| | Orthonormal bases | |
| | 4. Diagonalising symmetric operators | 131 |
| | Principal directions, isotropy | |

V. Tensors and Multilinear Forms

1. Tensor products, degree, contraction, raising indices 140

VI. Topological Vector Spaces

1. Continuity 164
Metrics, topologies, homeomorphisms

2. Limits 179
Convergence and continuity

3. The usual topology 183
Continuity in finite dimensions

4. Compactness and completeness 194
Intermediate Value Theorem, convergence, extrema

VII. Differentiation and Manifolds

1. Differentiation 212
Derivative as local linear approximation

2. Manifolds 226
Charts, maps, diffeomorphisms

3. Bundles and fields 239
Tangent and tensor bundles, metric tensors

4. Components 254
Hairy Ball Theorem, transformation formulae, raising indices

5. Curves 265
Parametrisation, length, integration

6. Vector fields and flows 274
First order ordinary differential equations

7. Lie brackets 281
Commuting vector fields and flows

VIII. Connections and Covariant Differentiation

1. Curves and tangent vectors 288
Representing a vector by a curve

2. Rolling without turning 1
Differentiation along curves in embedded manifolds

3. Differentiating sections 7
Connections, horizontal vectors, Christoffel symbols

4. Parallel transport 31
Integrating a connection

5. Torsion and symmetry 320
Torsion tensor of a connection
6. Metric tensors and connections 325
Levi-Cività connection
7. Covariant differentiation of tensors 336
Parallel transport, Ricci's Lemma, components, constancy

IX. Geodesics
1. Local characterisation 347
Undeviating curves
2. Geodesics from a point 352
Completeness, exponential map, normal coordinates
3. Global characterisation 360
Criticality of length and energy, First Variation Formula
4. Maxima, minima, uniqueness 372
Saddle points, mirages, Twins 'Paradox'
5. Geodesics in embedded manifolds 386
Characterisation, examples
6. An example of Lie group geometry 393
2×2 matrices as a pseudo-Riemannian manifold

X. Curvature 415
1. Flat spaces 416
Intrinsic description of local flatness
2. The curvature tensor 423
Properties and components
3. Curved surfaces 446
Gaussian curvature, Gauss-Bonnet Theorem
4. Geodesic deviation 453
Tidal effects in spacetime
5. Sectional curvature 454
Schur's Theorem, constant curvature
6. Ricci and Einstein tensors 460
Signs, geometry, Einstein manifolds, conservation equation
7. Weyl tensor 471
Vacuum curvature

XI. Special Relativity

1. Orienting spacetimes 475
Causality, particle histories

2. Motion in flat spacetime 478
Inertial frames, momentum, rest mass, mass-energy

3. Fields 490
Matter tensor, conservation

4. Forces 512
No scalar potentials

5. Gravitational red shift and curvature 515
Measurement gives a curved metric tensor

XII. General Relativity

1. How geometry governs matter 519
Equivalence principle, free fall

2. What matter does to geometry 526
Einstein's equation, shape of spacetime

3. The stars in their courses 536
Geometry of the solar system, Schwarzschild solution

4. Farewell particle 553

Appendix : Existence and Smoothness of Flows 556
Completeness, fixed point theorems, uniform convergence, solutions of differential equations, Inverse Function Theorem

Bibliography 580

Index of notations 582
