## Part 1. Differential and Integral Calculus on Manifolds

1. Introduction	3
2. Tangent Vector-Vector Field Formalism	6
3. Differential Forms	11
4. Specialization to Euclidean Spaces: Differential Manifolds	21
5. Mappings, Submanifolds, and the Implicit Function Theorem	28
6. The Jacobi Bracket and the Lie Theory of Ordinary Differential Equations	34
7. Lie Derivation and Exterior Derivative; Integration on Manifolds	46
8. The Frobenius Complete Integrability Theorem	63
9. Reduction of Dimension When a Lie Algebra of Vector Fields Leaves a Vector-Field Invariant	73
10. Lie Groups	81
11. Classical Mechanics of Particles and Continua	98

## Part 2. The Hamilton–Jacobi Theory and Calculus of Variations

12. Differential Forms and Variational Problems	113
13. Hamilton–Jacobi Theory	122
14. Extremal Fields and Sufficient Conditions for a Minimum	142
15. The Ordinary Problems of the Calculus of Variations	152
16. Groups of Symmetries of Variational Problems: Applications to Mechanics	170
17. Elliptic Functions	232
18. Accessibility Problems for Path Systems	241

## Part 3. Global Riemannian Geometry

19. Affine Connections on Differential Manifolds	261
20. The Riemannian Affine Connection and the First Variation Formula	272
21. The Hopf–Rinow Theorem; Applications to the Theory of Covering Spaces	284

22.	The Second Variation Formula and Jacobi Vector Fields	291
23.	Sectional Curvature and the Elementary Comparison Theorems	302
24.	Submanifolds of Riemannian Manifolds	318
25.	Groups of Isometries	342
26.	Deformation of Submanifolds in Riemannian Spaces	362

**Part 4. Differential Geometry and the Calculus of Variations: Additional Topics in Differential Geometry**

27.	First-Order Invariants of Submanifolds and Convexity for Affinely Connected Manifolds	373
28.	Affine Groups of Automorphisms. Induced Connections on Submanifolds. Projective Changes of Connection	378
29.	The Laplace–Beltrami Operator	386
30.	Characteristics and Shock Waves	394
31.	The Morse Index Theorem	401
32.	Complex Manifolds and Their Submanifolds	420
33.	Mechanics on Riemannian Manifolds	427
