Preface	vii
1 Smooth and sudden changes	1
1 Catastrophes	1
2 The Zeeman catastrophe machine	2
3 Gravitational catastrophe machines	5
4 Catastrophe theory	7
2 Multidimensional geometry	8
1 Set-theoretic notation	8
2 Euclidean space	11
3 Linear transformations	14
4 Matrices	16
5 Quadratic forms	20
6 Two-variable cubic forms	23
7 Polynomial geometry	29
3 Multidimensional calculus	34
1 Distance in Euclidean space	34
2 The derivative as tangent	35
3 Contours	39
4 Partial derivatives	40
5 Higher derivatives	42
6 Taylor series	43
7 Truncated algebra	46
8 The Inverse Function Theorem	47
9 The Implicit Function Theorem	49
4 Critical points and transversality	51
1 Critical points	52
2 The Morse Lemma	54
3 Functions of a single variable	56
4 Functions of several variables	59
5 The Splitting Lemma	61
6 Structural stability	63
7 Manifolds	65
8 Transversality	65
9 Transversality and stability	69
10 Transversality for mappings	71
11 Codimension	72
5 Machines revisited	75
1 The Zeeman machine	75
2 The canonical cusp catastrophe	78

3	Dynamics of the Zeeman machine	83
4	The gravitational machines	86
5	Formulation of a general problem	88
6	Structural stability	90
1	Equivalence of families	90
2	Structural stability of families	92
3	Physical interpretations of structural stability	94
4	The Morse and Splitting Lemmas for families	95
5	Catastrophe geometry	97
7	Thom's classification theorem	99
1	Functions and families of functions	99
2	One-parameter families	100
3	Non-transversality and symmetry	107
4	Two-parameter families	109
5	Three-, four- and five-parameter families	114
6	Higher catastrophes	119
7	Thom's theorem	121
8	Determinacy and unfoldings	123
1	Determinacy and strong determinacy	124
2	One-variable jet spaces	125
3	Infinitesimal changes of variable	129
4	Weaker determinacy conditions	134
5	Transformations that move the origin	137
6	Tangency and transversality	139
7	Codimension and unfoldings	143
8	Transversality and universality	150
9	Strong equivalence of unfoldings	152
10	Numbers associated with singularities	154
11	Inequalities	156
12	Summary of results and calculation methods	157
13	Examples and calculations	164
14	Compulsory remarks on terminology	170
9	The first seven catastrophe geometries	172
1	The objects of study	172
2	The fold catastrophe	173
3	The cusp catastrophe	174
4	The swallowtail catastrophe	176
5	The butterfly catastrophe	178
6	The elliptic umbilic	180
7	The hyperbolic umbilic	184
8	The parabolic umbilic	186
9	Ruled surfaces	191

10 Stability of ships	194
Static equilibrium	194
1 Buoyancy	194
2 Equilibrium	195
3 Stability	195
4 The vertical-sided ship	195
5 Geometry of the buoyancy locus	197
6 Metacentres	197
Ship shapes	199
7 The elliptical ship	199
8 The rectangular ship	202
9 Three dimensions	205
10 Oil-rigs	209
11 Comparison with current methods	211
11 The geometry of fluids	216
Background on fluid mechanics	216
1 What we are describing	216
2 Stream functions	218
3 Examples of flows	220
4 Rotation	221
5 Complex variable methods	223
Stability and experiment	224
6 Changes of variable	224
7 Heuristic programme	225
8 Experimental realization	226
Combing polymer molecules	229
9 Non-Newtonian behaviour	229
10 Extensional flows	231
Degenerate flows	233
11 The six-roll mill	233
12 The non-local bifurcation set of the elliptic umbilic	237
13 The six-roll mill with polymer solution	239
14 The $2n$ -roll mill	244
12 Optics and scattering theory	246
Ray optics	246
1 Caustics	246
2 The rainbow	252
3 Variational principles	253
4 Scattering	255
Wave optics	258
5 Asymptotic solutions of wave equations	258
6 Oscillatory integrals	260

7 Universal unfoldings	263
8 Orders of caustics	264
Applications	267
9 Scattering from a crystal lattice	267
10 Other caustics	271
11 Mirages	273
12 Sonic booms	275
13 Giant ocean waves	279
13 Elastic structures	284
General theory	285
1 Objects under stress	285
2 Elastic equilibria	287
3 Infinite-dimensional peculiarities	289
Euler struts	290
4 Finite element version	290
5 Classical (1744) variational version	292
6 Perturbation analysis	296
7 Modern functional analysis	298
8 The buckling of a spring	301
9 The pinned strut	305
The geometry of collapse	307
10 Imperfection sensitivity	307
11 (r, s) -Stability	310
12 Optimization	313
13 Symmetry: rods and shells	314
Buckling plates	317
14 The von Kármán equations	317
15 Unfolding a double eigenvalue	320
Dynamics	324
16 Soft modes	324
17 Stiffness	325
14 Thermodynamics and phase transitions	327
Equations of state	327
1 van der Waals' equation	327
2 Ferromagnetism	330
Thermodynamic potentials	333
3 Entropy	333
4 Transforming the maximum entropy principle	334
5 Legendre transformations	335
6 Explicit potentials	336
7 The Landau theory	339

Fluctuations and critical exponents	341
8 Classical exponents	341
9 Topological tinkering	343
10 The rôle of fluctuations	344
11 Spatial variation	346
12 Partition functions	347
13 Renormalization group	349
14 Structural stability of renormalization	350
The rôle of symmetry	351
15 Even functions	351
16 The shapes of rotating stars	352
17 Symmetry breaking	354
18 Tricritical points	355
19 Crystal symmetries	357
20 Spectrum singularities	358
15 Laser physics	360
Preliminaries	361
1 Atoms	361
2 Field	363
3 Interaction	364
4 Measurement	365
The laser catastrophe	366
5 Unfolded Hamiltonian	366
6 Equations of motion	367
7 Mean field approximation	369
8 Boundary conditions	370
9 Non-equilibrium stationary manifold	371
Experiments	372
10 Laser transition	373
11 Optical bistability	373
12 Photocount distributions	375
Analytic correspondence	380
13 Equilibrium boundary conditions	380
14 Equilibrium manifold	381
15 Thermodynamic phase transition	381
16 Critical behaviour	381
17 Analytic correspondence of experiments	382
18 Future prospects	383
16 Biology and ecology	384
The size of bee societies	384
1 Bee economics	384
2 The advantages of aggregation	385
3 Catastrophe geometry	386

4 Variation in space	387
5 Complications	388
Constraint catastrophes	389
6 Boundary effects	389
7 Classification	390
Travelling waves in ecology	393
8 Choice of convention and model	393
9 Frontiers	394
10 Numerical tests	396
11 How frontiers stabilize	399
12 How differentiation begins	400
Embryology	403
13 Cell differentiation	403
14 Switching catastrophes	406
17 The problems of social modelling	409
1 Identification of variables	409
2 The archaeology of sudden change	412
3 Catastrophes as models	413
4 Prison riots	416
5 Bistability of perception	419
6 Alcohol and introverts	420
7 Beyond elementary catastrophe theory	423
18 Catastrophe theory: whither away?	426
1 The present state	426
2 The future	428
Appendix 1	431
Computer program for determinacy and unfoldings By D. R. Olsen, S. R. Carter and A. Rockwood	431
Appendix 2	442
Catastrophes in numerical analysis	442
Guide to the literature	445
Bibliography of catastrophe theory	448
References	467
Index	479
