Chapter 1 QUALITATIVE THEORY

Some Qualitative Aspects of the Three-Body Flow.	1
ROBERT W. EASTON	
Separatrix Structure for Regions Attracted to Solitary Periodic Solutions	7
RICHARD H. ELDERKIN	
Solitary Invariant Sets	13
RICHARD H. ELDERKIN AND F. WESLEY WILSON, JR.	
Singular Points and Separatrices	19
C. S. HARTZMAN	
Global Results by Local Averaging for Nearly Hamiltonian Systems	25
JAMES MURDOCK	
Equivalence of Suspensions and Manifolds with Cross Section	29
DAVID R. NAUGLER	
Structural Stability Theorems	33
R. CLARK ROBINSON	
Numerical Studies of an Area-Preserving Mapping	37
MARTIN BRAUN	
A Geometrical Approach to Classical Mechanics	41
CHONG-PIN ONG	

Chapter 2 GENERAL THEORY

- A Solution of Ulam's Conjecture on the Existence of
Invariant Measures and Its Applications 47

ANDRZEJ LASOTA

- Bifurcation Theory for Odd Potential Operators 57

R. R. HUILGOL

- An Existence Theorem for Solutions of Orientor
Fields 63

CZESŁAW OLECH

- Nonlinear Perturbations at Resonance 67

R. KANNAN

- On Continuous Dependence of Fixed Points of
Condensing Maps 73

ZVI ARTSTEIN

- Small Noise Ergodic Dynamical Systems 77

CHARLES HOLLAND

Chapter 3 EVOLUTIONARY EQUATIONS

- "Pointwise Degeneracy" for Delay Evolutionary
Equations 81

PIERRE CHARRIER

- On Constructing a Liapunov Functional While
Defining a Linear Dynamical System 87

J. A. WALKER

- Measurability and Continuity Conditions for
Evolutionary Processes 91

JOHN M. BALL

- Stabilization of Linear Evolutionary Processes 95

RICHARD DATKO

Chapter 4 FUNCTIONAL DIFFERENTIAL EQUATIONS

Bifurcation Theory and Periodic Solutions of Some Autonomous Functional Differential Equations	99
ROGER D. NUSSBAUM	
A Stability Criterion for Linear Autonomous Functional Differential Equations	103
F. KAPPEL	
Periodic Differential Difference Equations	109
JAMES C. LILLO	
Point Data Problems for Functional Differential Equations	115
RODNEY D. DRIVER	
Relations between Functional and Ordinary Differential Equations	123
CARLOS IMAZ	
Asymptotically Autonomous Neutral Functional Differential Equations with Time-Dependent Lag	127
A. F. IZE AND N. A. DE MOLFETTA	
The Invariance Principle for Functional Equations	133
N. ROUCHE	
Existence and Stability of Periodic Solutions of $x'(t) = -f(x(t), x(t-1))$	137
JAMES L. KAPLAN AND JAMES A. YORKE	
Existence and Stability of Solutions on the Real Line to $x(t) + \int_{-\infty}^t a(t-\tau)g(\tau, x(\tau)) d\tau = f(t)$, with General Forcing Term	143
M. J. LEITMAN AND V. J. MIZEL	
Existence and Stability for Partial Functional Differential Equations	147
C. C. TRAVIS AND G. F. WEBB	

Periodic Solutions to a Population Equation	153
JAMES M. GREENBERG	
Existence and Stability of Forced Oscillation in Retarded Equations	159
ORLANDO LOPES	
Exact Solutions of Some Functional Differential Equations	163
CLEMENT A. W. MCCALLA	
Chapter 5 TOPOLOGICAL DYNAMICAL SYSTEMS	
Extendability of an Elementary Dynamical System to an Abstract Local Dynamical System	169
TARO URA	
Skew-Product Dynamical Systems	175
ROBERT J. SACKER	
Liapunov Functions and the Comparison Principle	181
PETER SEIBERT	
Distal Semidynamical Systems	187
NAM P. BHATIA AND M. NISHIHAMA	
Prolongations in Semidynamical Systems	191
PREM N. BAJAJ	
When Do Liapunov Functions Exist on Invariant Neighborhoods?	197
NAM P. BHATIA AND M. NISHIHAMA	
The "Simplest" Dynamical System	203
TIEN-YIEN LI AND JAMES A. YORKE	
Continuous Operators That Generate Many Flows	207
COKE S. REED	
Existence and Continuity of Liapunov Functions in General Systems	211
PABLO M. SALZBERG	

Chapter 6 ORDINARY DIFFERENTIAL AND VOLTERRA EQUATIONS

Stability under the Perturbation by a Class of Functions	217
JUNJI KATO AND TARO YOSHIKAWA	
On a General Type of Second-Order Forced Nonlinear Oscillations	223
R. REISSIG	
Stability of Periodic Linear Systems and the Geometry of Lie Groups	227
ROGER W. BROCKETT	
Periodic Solutions of Holomorphic Differential Equations	233
N. G. LLOYD	
On the Newton Method of Solving Problems of the Least Squares Type for Ordinary Differential Equations	237
MINORU URABE	
A Study on Generation of Nonuniqueness	243
YASUTAKA SIBUYA	
Relative Asymptotic Equivalence with Weight t^μ, between Two Systems of Ordinary Differential Equations	249
HILDEBRANDO MUNHOZ RODRIGUES	
Partial Peeling	255
OKAN GUREL	
Boundary Value Problems for Perturbed Differential Equations	261
T. G. PROCTOR	
On Stability of Solutions of Perturbed Differential Equations	265
B. S. LALLI AND R. S. RAMBALLY	

Stability Theory for Nonautonomous Systems	271
JOHN R. HADDOCK	
A Nonoscillation Result for a Forced Second-Order Nonlinear Differential Equation	275
JOHN R. GRAEF AND PAUL W. SPIKES	
Convexity Properties and Bounds for a Class of Linear Autonomous Mechanical Systems	279
R. H. PLAUT	
Dynamical Systems Arising from Electrical Networks	285
T. MATSUMOTO	
An Invariance Principle for Vector Liapunov Functions	291
JOSEPH P. LASALLE AND E. N. ONWUCHEKWA	
Stability of a Nonlinear Volterra Equation	297
J. A. NOHEL AND D. F. SHEA	
On a Class of Volterra Integrodifferential Equations	303
GEORGE SEIFERT	
Existence and Continuation Properties of Solutions of a Nonlinear Volterra Integral Equation	307
TERRY L. HERDMAN	
Author Index	311
Subject Index	313
