Contents

Preface			•••		•••			v
Chapter ⁻	1: Intr	oduction	l		•••			1
	1. W	/hat kind	of model?					1
	2. N	Iodelling i	n Perspect	ive	 vout of th	 Pook	•••	4
	5. U	refieranzed	Modening	g and La	your or th	e book	••	6
	4. C	onclusion		••	••	••	••	0
	5. N	lotes and I	<i>Aeterences</i>		• •	• •		6

PART 1: BASICS

Chapter 2:	Generalized Variables	and Sy	vstem El	ements		9
	Introduction		• •			9
	1. System Variables		• •			10
	2. Basic System Elements					16
	3. Additional System Elem	ents				24
	4. Conclusion					26
	5. Notes and References					27
Chanter 3.	Basic System Flement	e in M	ochanic	al Electr	rical Elu	uid
Chapter 3:	Basic System Element Magnetic and Thermal	s in M Syste	echanic ms	al, Electi	rical, Flu	iid , 28
Chapter 3:	Basic System Element Magnetic and Thermal Introduction	s in M Syste	echanic ms	al, Electi	rical, Flu	1 id , 28 28
Chapter 3:	Basic System Elements Magnetic and Thermal Introduction 1. Mechanical Systems	s in M Syste	echanic ms	al, Electi	rical, Flu	1 id , 28 28 28
Chapter 3:	Basic System Elements Magnetic and Thermal Introduction 1. Mechanical Systems 2. Electrical Systems	s in M Syste	echanic ms	al, Electı	rical, Flu 	1 id , 28 28 28 28 36
Chapter 3:	Basic System Elements Magnetic and Thermal Introduction 1. Mechanical Systems 2. Electrical Systems 3. Fluid Systems	s in M Syste	echanic ms	al, Electr	rical, Flu 	11d, 28 28 28 36 40
Chapter 3:	 Basic System Elements Magnetic and Thermal Introduction 1. Mechanical Systems 2. Electrical Systems 3. Fluid Systems 4. Magnetic Systems 	s in Mi Syste	echanic ms 	al, Electr 	rical, Flu 	iid , 28 28 28 36 40 48
Chapter 3:	 Basic System Elements Magnetic and Thermal Introduction 1. Mechanical Systems 2. Electrical Systems 3. Fluid Systems 4. Magnetic Systems 5. Thermal Systems 	s in M Syste	echanic ms	al, Electr 	rical, Flu 	1id , 28 28 28 36 40 48 50
Chapter 3:	 Basic System Elements Magnetic and Thermal Introduction Mechanical Systems Electrical Systems Fluid Systems Magnetic Systems Thermal Systems Notes and References 	s in M Syste	echanic ems 	al, Electi 	rical, Flu 	1id , 28 28 28 36 40 48 50 52

Chapter 4: Special Multi-port Syst	tem E	lements	 	55
Introduction		••	 	55
1. Energy Converters			 	55
2. Energy Couplers.			 	61
3. Modulated Multi-ports			 	69
4. Notes and References			 	71
5. Problems			 	72

						~ .
Chapter 5:	Interconnection of Sys	stem Eler	nents	• •	••	/4
	Introduction	•••		••	••	/4
	1. Mechanical Systems				• •	77
	2. Electrical Systems			• •		81
	3. Fluid Systems			• •		83
	Magnetic Systems					85
	5. Thermal Systems					86
	6. Process Systems .					88
	7. Summary					91
	8. Notes and References					92
	9. Problems	••			••	93
F	PART 2: SYSTEMATIO		ELLING	METH	IODS	
Chapter 6	: Network Methods					99
-	Introduction					99
	1. The Representation of 2	Systems by	y Linear (Graphs		99
	2. Linear Graph Definitio	ns				107
	3. Algebraic Forms of Inte	erconnecti	ve Constr	aints		111
	4. Representation of Edge	Constitut	ive Relati	ons and	Source	
	Equivalents					119
	5. Transform Equation Fo	ormulation	1			125
	6. State Space Equation F	Formulatio	n			135
	7. Analogues and Duals					138
	8. Notes and References					140
	9. Problems					140
						1.4.4
Chapter 7	variational wiethods	• •	••	••	•••	144
	Introduction			 Dl · · ·		144
	1. The Basic Ideas of Vari	ational Ar	nalysis of	Physical	Systems	144
	2. The Construction of a	Variationa	Indicato	or.	• •	151
	3. Nodal Variational Anal	lysis		••	• •	152
	4. Loop Variational Analy	/\$1\$		••	• •	157
	5. Variational Analysis of	Mechanic	al System	s.	• •	160
	6. Variational Analysis of	Electrical	Circuits	••	••	171
	7. Variational Analysis of	Fluid Syst	lems	••	••	176
	8. Variational Analysis of	Composit	e Systems			181
	9. Notes and References	••				187
	10. Problems	•••	••	• •		188
Chapter 8:	Bond Graph Methods					193
	Introduction					193
	1. Word Bond Graphs					193
	2. Basic Bond Graph Cor	nponents				196
	3. Interconnection of Bon	d Graph (Componei	nts.		200
	4. Other Useful Bond Gra	iph Comp	onents			205
	5. Dynamic Equation For	mulation				208
	6. Transfer Functions from	n Bond G	raphs			227
	7. Relationships with Net	work Metl	hods			230
	8. Notes and References			••	••	233
	9. Problems					234

PART 3: CASE STUDIES

Case Study 1:	The Paper Machine Flo	w or He	ad-Box	 	239
	Introduction			 	239
	1. Direct Derivation of the	Dynamic	Equation	 	240
	2. A Bond Graph Model			 	241
	3. Notes and References			 	244
	4. Problems			 	244
Case Study 2:	An Overhead Gantry C	rane		 	246
	Introduction			 	246
	1. Direct Derivation of the	Model		 	247
	2. Lagrangian Model			 	249
	3. Notes and References			 	251
	4. Problems			 	251
Case Study 3:	The Ball and Beam Pro	blem		 	253
	Introduction			 	253
	1. Mathematical Model			 	254
	2. Bond Graph Model			 	256
	3. Notes and References			 	258
	4. Problems			 	259
Case Study 4:	An Automotive Engine	Test Be	d	 	261
	Introduction			 	261
	1. The System Model			 	262
	2. A Network Model			 	264
	3. A Bond Graph Model			 	265
	4. Extensions to the Mode	1		 	267
	5. Notes and References			 	268
	6. Problems			 	268
Case Study 5:	Coupled Electric Drive	S		 	269
-	Introduction			 	269
	1. Direct Derivation of the	Model		 	269
	2. Other Modelling Metho	ds.		 	272
	3. Problems			 	273
Subject Index				 	275
