<b>PREFACE</b>	K. Oshima	iii
<b>OPENING LECTURES</b>		
Progress of cryogenic engineering in Japan Y. Oyama		viii
Cryogenics: The present and the future K. Mendelssohn		ix
<b>GENERAL LECTURES</b>		
Superconducting Lineac W. M. Fairbank		1
High field superconductivity K. Mendelssohn		4
The application of the Stirling Cycle at cryogenic temperatures J. W. L. Köhler		9
Cryogenic technology aspects of space flight C. C. Wood and H. G. Paul		13
<b>CRYOPUMPS AND INSULATION</b>		
Precise measurement of the capture coefficient of a gas on a liquid helium cooled surface J. J. Thibault, J. Roussel, A. Nanoboff, and P. Didier		20
Some characteristics of a cryopump K. Nishida, S. Matsui, and M. Yanai		23
The development of the cryopump at E.T.L. Y. Akiyama and H. Ishii		26
Adsorption of non-condensable gases in condensation pumps E. Müller		30
Experiments on the heat insulation of multi-layer aluminized Mylar H. Nakagawa		31
Some experimental studies on the thermal conductivity of multi-layer insulation R. S. Mikhal'chenko, A. G. Gerzhin, N. P. Pershin, and L. B. Klipach		34
Neon as a cooling agent L. Bewilogua		38
Cryogenics in space simulation S. Mercer and M. Ruhemann		41
Space applications of cryogenic technology R. W. Vance		43
<b>CRYOGENIC MATERIALS AND THERMOMETRY</b>		
A resistance thermometer using the 'Glassy Carbon' T. Kodama, S. Wada, T. Shigi, and T. Okuda		47
A simple gas thermometer with linear electrical output H. T. Coffey and G. J. Faychak		49
The specific heat of hydrogen at pressures up to 500 atm in the range 20-70° K M. P. Orlova, D. N. Astrov, V. A. Medvedev, and Y. A. Dedikov		50
Cryogenic aspects of the development of a hydrogen-oxygen stage structure J. Menard and M. Segel		52
Low temperature vapour-liquid equilibria of hydrogen-containing binaries M. Yorizane, S. Yoshimura, H. Masuoka, and A. Toyama		57
Utilization of the cooling capacity of cryogenic liquid vapours S. P. Gorbachev and M. G. Kaganer		62

A gas-thermometric determination of low temperatures T. Mochizuki, K. Mitsui, M. Takahashi, and T. Shiratori	65
Drawing work of 18-8 stainless steel at low temperatures H. Izumi and Y. Ando	66
Hydraulic cavitation in some cryogenic fluids K. Nishigaki, Y. Saji, and H. Wakeshima	68
Design considerations of a cryomicroscope for cryobiological studies J. Okada	70
Precise low temperature thermometry based on nuclear quadrupole resonance V. I. Soloviev	72
Cryogenic phenomena in the 'vapour dome' region: An approach for the investigation of transitional thermodynamics of this region for cryogenic hydrogen F. F. Liu	74

## **SUPERCONDUCTING MAGNETS AND DEVICES**

The technology of superconducting magnets D. B. Montgomery	81
Large superconducting magnet systems C. Laverick	87
Superconductive magnets at Lewis Research Centre of N.A.S.A. J. C. Laurence	94
Superconducting magnet and cryogenic apparatus for an N.M.R. experiment at 80 kOe A. de la Harpe, D. Marinet, and J. M. Leroux	98
Design and construction of tape-wound high field superconducting solenoids C. D. Graham, Jr., and H. R. Hart, Jr.	101
Superconducting magnet programmes for M.H.D. power generation at Toshiba Central Research Laboratory M. Yamamoto, H. Ichikawa, Y. Saito, H. Hoshino, and H. Yonemitsu	104
Stabilization techniques for superconducting coils R. Carruthers, D. N. Cornish, and R. Hancox	107
15 cm bore superconducting magnets H. Kimura, K. Kuroda, and H. Ogata	109
Large superconducting magnets for MHD Z. J. J. Stekly	112
Superconducting magnets for high energy physics applications H. Brechna	119
Superconducting baseball coil for plasma confinement C. D. Henning and C. E. Taylor	130
Superconductive devices to produce d.c. currents T. A. Buchhold	133
The use of superconducting dynamos D. Van Houwelingen and J. Volger	135
The efficiency of flux pumps S. L. Wipf	137
Economic considerations in the design of niobium-tin superconductive magnets C. H. Rosner	140
Liquid helium dewars for superconducting magnets W. G. Hendrixson	142
Inductive behaviour of a 33 kG superconducting plate shield R. Benaroya and T. E. Zinneman	144

## **SUPERCONDUCTING MATERIALS**

Materials for superconducting magnets P. F. Chester	147
Superconducting properties of titanium-niobium-tantalum ternary alloys Y. Hashimoto, M. Tanaka, I. Hirata, K. Ishihara, and T. Komata	150

Superconducting niobium-zirconium-titanium ternary alloy strips for large high field magnets T. Doi, M. Kudo, U. Kawabe, and H. Kimura	152
Superconducting properties of $V_3Ga$ wires and $Nb_3Sn$ tapes made by a diffusion process K. Tachikawa, S. Fukuda, and Y. Tanaka	154
Properties of some high field superconductors in fields up to 240 kOe E. Saur and H. Witzgall	156
Current-carrying capacity of superconducting strips S. Tomiyama, M. Watanabe, T. Hirasawa, M. Umeda, M. Kimura, Y. Aiyama, and T. Nagashima	159
Influence of $\alpha$ -irradiation on the transition temperature of superconducting tin, indium and thallium foils A. Van Itterbeek, L. Van Poucke, V. Bruynseraede, and J. David	161
Properties of superconductive thin tin films Y. Onodera, H. Kobayashi, M. Kunita, and T. Yamashita	163
Effects of microwaves and magnetic field on a.c. Josephson current T. Yamashita and Y. Onodera	165

## DISSIPATIVE PHENOMENA AND INSTRUMENTATION

Flux flow and instabilities in superconductors Y. B. Kim	168
Observations of flux jumps in a multilayer superconducting coil M. Iwamoto, N. Kaneseiki, and T. Sato	174
Low field instability of superconducting wire K. Yasukochi, T. Ogasawara, N. Usui, H. Kobayashi, and T. Ando	175
Energy consumption in a superconducting magnet F. Irie and K. Yamafuji	177
Resistive characteristics of short samples of superconducting wires in copper strips S. Matsunaga, S. Yano, S. Ushio, K. Uchiho, and S. Nakaya	178
Destruction of superconductivity by a rectangular pulse current Y. Shibuya, H. Abe, T. Aomine, and S. Koga	181
Size effects in a.c. losses of hard superconducting wires N. Takano	184
Correlations between alternating magnetic field losses and magnetizations of hard superconducting wires Y. Nakayama and N. Takano	186
Sensitive instruments using superconductive properties W. S. Goree and T. W. Barbee	188
Literature survey of superconducting devices W. S. Goree	190
Cryogenic techniques in electrical engineering E. Carbonell and A. de la Harpe	192

## REFRIGERATION SYSTEMS

Desorption cooling at temperatures below 20° K J. G. Daunt	195
Miniature closed circuit single-stage Claude Cycle refrigerator for 28° K D. N. Campbell	197
Calculation and optimization of expander cryogenic cycles on electronic digital computers V. M. Brodjanskii	198
Two-stage miniature throttle type liquefiers N. K. Yelukhin, V. G. Pronko, G. V. Vasyunina, O. K. Krasnikova O. D. Suyetenko, and Y. G. Vinokur	201
Refrigeration systems and cooling devices, including solid state cooling K. W. Taconis	204
Cryogenic engineering at the P.R.M.I. M. P. Orlova, D. N. Astrov, D. I. Sharevskaya, L. B. Belyansky, G. A. Kytin, and N. P. Rybkin	207

New type expansion engine for refrigeration Y. Matsubara, Y. Ishizaki, and K. Oshima	210
A small liquid oxygen installation A. M. Archarov and O. A. Lomakina	212
Closed cycle helium refrigerator for maser application A. Kurihara, K. Kikuchi, and H. Nagano	213
Refrigerator for 1.8° K S. C. Collins and M. H. Streeter	215
Some experiments on the reciprocating expander for large helium liquefiers T. Sato	217
Large scale helium refrigeration system for the range 2-20° K G. Y. Robinson, Jr., and W. H. Hogan	219
Refrigeration at very low temperatures W. E. Gifford	221
Cryogenic equipment of the Institute for Physical Problems M. P. Malkov and I. B. Danilov	225
Cascade helium liquefiers with piston type engines P. L. Kapitza and I. B. Danilov	228
Thermodynamics of pulse tube refrigeration P. Hrycak and M. J. Levy	231
The helium-3 dilution refrigerator M. F. Wood and D. Phillips	233
Device for discharging cryogenic liquids H. Koizumi	236
Vapour cooling heat exchanger H. Yonemitsu and T. Fukuda	238
Liquid circulation type cryostat for neutron diffraction experiments T. Tsushima, K. Sakai, Y. Kawakita, and I. Shibuya	240
Liquefied gas-cooled targets H. Nagano and N. Watanabe	242
Dependence of heat transfer efficiency of a thermosiphon on transfer coefficients R. Knöner	244
Cryogenic reactor irradiation devices and neutron moderators L. Weil	246
Low temperature in-pile irradiation facility H. Suzuki, H. Kumamoto, K. Daimon, K. Akashi, S. Hagihara, and O. Ogino	251
Turbodetanders for cryogenic installations B. A. Antipenkov	254
Expansion turbine for medium pressure M. Horikawa	255
Largest air separation plant in Japan H. Fujita and H. Takagi	258
Carbon monoxide separation by a low temperature process T. Mori	260
Some problems of explosion-proof operation of air-separation installations E. V. Vagin	262
Cryogenic research at the Los Alamos Scientific Laboratory E. F. Hamel	265
Applications of gas-lubricated bearings in cryogenic refrigerators H. Sixsmith	270
New developments in expansion machinery for low temperature refrigerators M. E. Clarke and J. B. Gardner	273
Development of tonnage air separation plant in Japan A. Toyama and Y. Nakako	275
Characteristics of industrial scale helium refrigerators with turbo-expanders C. Trepp	277

**CLOSING ADDRESS**

E. Kanda **280**
