

# Contents

<b>1</b>	<b>Vacua and Vacuum Technology</b>	
1.1	What is a Vacuum?	1
1.2	The Basic Topics of Vacuum Technology	2
<b>2</b>	<b>Conductance and Pump Speed</b>	
2.1	The Concept of Conductance	3
2.2	Conductances in Series and Parallel	4
2.3	The Effect of Pressure on Flow Regime and Conductance	5
2.4	The Conductance of an Aperture	5
2.5	The Conductance of a Channel	6
2.6	The Conductance of a Cold Trap	8
2.7	The Speed of a Pump	8
2.8	Pump-down Time	10
<b>3</b>	<b>Vacuum Pumps</b>	
3.1	Preliminary Survey of Types of Vacuum Pump	12
3.2	Mechanical Pumps	13
	<i>3.2.1 Oil-sealed mechanical pumps. 3.2.2 Roots pumps. 3.2.3 Mechanical molecular pumps. 3.2.3.1 Molecular drag pumps. 3.2.3.2 Turbo-molecular pumps.</i>	
3.3	Vapour-stream Pumps (Diffusion Pumps)	18
	<i>3.3.1 Basic principle. 3.3.2 Mercury diffusion pumps. 3.3.3 Oil diffusion pumps. 3.3.4 The speed of diffusion pumps. 3.3.5 Backstreaming of diffusion pumps. 3.3.6 Steam ejector pumps.</i>	
3.4	Chemical Pumps	24
	<i>3.4.1 Sputter ion pumps. 3.4.2 Titanium sublimation pumps. 3.4.3 Other chemical pumps.</i>	
3.5	Sorption Pumps	27
3.6	Cryopumps	30
		vii

<b>4</b>	<b>Measurement of Pressure</b>	
4.1	Introduction	33
4.2	Survey of Types of Gauge Measuring Total Pressure	34
	<i>4.2.1 Barometric types. 4.2.2 Mechanical types. 4.2.3 Gauges of the McLeod type. 4.2.4 Thermal conductivity gauges. 4.2.5 Hot-cathode ionisation gauges. 4.2.6 Cold-cathode ionisation gauges. 4.2.7 Gauges depending on other physical properties.</i>	
4.3	The McLeod Gauge	35
	<i>4.3.1 The mercury vapour-stream effect.</i>	
4.4	Thermal Conductivity Gauges	38
	<i>4.4.1 The Pirani gauge. 4.4.2 The thermocouple gauge. 4.4.3 The thermistor gauge.</i>	
4.5	Hot-cathode Ionisation Gauges	42
	<i>4.5.1 The Bayard–Alpert gauge. 4.5.2 Other hot-cathode gauges.</i>	
4.6	Cold-cathode Ionisation Gauges	46
	<i>4.6.1 The Penning cold-cathode gauge. 4.6.2 Other cold-cathode gauges.</i>	
4.7	The Knudsen Gauge	48
4.8	The Viscosity Gauge	48
4.9	Gauge Calibration	49
	<i>4.9.1 Comparison with a McLeod gauge. 4.9.2 Gas-expansion method. 4.9.3 The dynamic method.</i>	
4.10	Thermal Transpiration and Pressure Measurement	52
4.11	The Determination of Partial Pressures	53
	<i>4.11.1 Partial pressures by mass spectrometry. 4.11.2 Important characteristics of mass spectrometers. 4.11.3 Types of mass spectrometer. 4.11.4 Measurement of partial pressures by sorption methods.</i>	
<b>5</b>	<b>Materials and the Design of Apparatus</b>	
5.1	Material Properties and Design Requirements	59
5.2	Glass and Glass-to-Metal Seals	59
5.3	Metals	61
5.4	Plastics	62
5.5	Waxes and Greases	63
5.6	Demountable Couplings and Motion <i>in Vacuo</i>	63
5.7	Vacuum Taps and Valves	65

<i>Contents</i>	ix
5.8 Outgassing	67
5.9 Design Procedure	68
5.10 Leak Detection	71
<i>5.10.1 Detection of presence, but not location. 5.10.2 The bubble method. 5.10.3 Use of Tesla discharge. 5.10.4 Use of instrumentation already part of the apparatus. 5.10.5 Use of special instrumentation.</i>	
<b>6 Ultra-high Vacuum</b>	
6.1 General	76
6.2 Pumps	77
6.3 Methods of Pressure Measurement	77
<i>6.3.1 The problem. 6.3.2 Hot-cathode gauges. 6.3.3 Cold-cathode gauges. 6.3.4 Partial pressure analysis.</i>	
6.4 Construction and Materials of UHV Systems	80
<b>7 Applications of Vacuum Technology</b>	
7.1 General	83
7.2 High Vacuum as an Electrical Insulator	84
7.3 Separation by Vacuum Distillation	84
7.4 Freeze Drying	85
7.5 Manufacture of Lamps and Thermionic and Semiconductor Devices	87
7.6 Vacuum Metallurgy	88
7.7 Coating by Vacuum Evaporation	90
7.8 Environmental Testing of Spacecraft	92
7.9 Vacuum as Thermal Insulation	93
<b>Appendices</b>	
I Some Relevant Formulae in the Kinetic Theory of Gases	97
<i>The Maxwellian distribution of speeds. The mean-square speed. The mean speed. The average kinetic energy. Equation of perfect gases. The average rate of bombardment. Quantities of gas. Flow rates. Mean free path. The thermal conductivity of a gas.</i>	
II Notes on Topics in Physics Relevant to Vacuum Technology	100

	<i>Atomic and molecular magnitudes. Units and constants. Evaporation and vapour pressure. Outgassing. Adsorption. Thermal accommodation coefficient. Gettering. Diffusion. Photons. Electronic structure of atoms. Ionisation potential and efficiency of ionisation. Thermionic emission. Photoelectric emission. Field emission. X-rays. The gyromagnetic or cyclotron frequency. Cold-cathode discharge. Sputtering. The Boltzmann factor.</i>	
III	Bibliographical Note	109
IV	Some Chemical Elements Used in Vacuum Technology	110
