Chapter 1 Flow Pattern Transitions in Gas-Liquid Systems: Measurement and Modeling *A. E. Dukler and Y. Taitel* 1

1 Introduction 1
2 Classification of Flow Patterns 3
2.1 Horizontal Pipes: Fig. 1 4
2.1.1 Stratified 4
2.1.2 Intermittent 5
2.1.3 Annular 5
2.1.4 Dispersed Bubble 5
2.2 Vertical Pipes: Fig. 2 5
2.2.1 Bubble Flow 5
2.2.2 Slug Flow 5
2.2.3 Churn Flow 6
2.2.4 Annular Flow 6
3 Flow-Pattern Detection 7
3.1 Visual Methods 7
3.2 Methods Based on Pressure Measurement 8
3.3 Methods Based on Photon Attenuation 11
3.4 Methods Based on Electrical Conductivity 12
4 Modeling Flow-Pattern Transitions: Some General Ideas 14
5 Horizontal and Slightly Inclined Pipes: Steady Motion without Mass Transfer between Phases 16
5.1 Equilibrium Stratified Flow 16
5.2 Transition from Stratified Flow 19
5.3 Transition between Intermittent and Annular 22
5.4 Transition between Stratified-Smooth and Stratified-Wavy Patterns 23
5.5 Transition between Intermittent and Dispersed Bubble Patterns 25
5.6 The Flow Pattern Map: Summary 26
5.6.1 Comparison with Data 26
6 Effect of Flow Transients in Horizontal Pipes 29
6.1 Analysis 30
6.2 An Example: Liquid Feed Transients 33
6.3 An Example: Fast Gas Transients 34
7 Effects of Boiling and Condensation in Horizontal Pipes 37
7.1 Analysis 37
7.2 Transition Criteria 41

8 Vertical Pipes: Steady Motion without Mass Transfer—Upflow and Downflow 46
8.1 Concurrent Upflow 47
8.1.1 Bubble-to-Slug Transition 47
8.1.2 Slug-to-Churn Transition 53
8.1.3 Transition from Annular Flow 57
8.1.4 Discussion 59
8.2 Concurrent Downflow 61
8.2.1 Transition from Annular Flow 61
8.2.2 Slug-to-Dispersed Bubble Transition 64
9 Effect of Pipe Inclination 65
9.1 Concurrent Upward Flow in an Inclined Tube 66
9.1.1 Bubble-to-Slug Transition and Minimum Inclination Angle for Bubbly Flow 67
9.1.2 Transition from Annular Flow 70
9.1.3 Slug-to-Churn Transition 70
9.1.4 Intermediate Angles of Inclination 70
9.2 Concurrent Downward Flow in an Inclined Tube 71
9.2.1 Stratified Smooth-to-Stratified Wavy Transition 73
9.2.2 Stratified-to-Annular Transition 73
10 Transition Mechanisms in Tubes: An Overview 76
11 Vertical Rod Bundles 77
11.1 Bubble Rise Velocities 78
11.2 Bubble-to-Slug Transition 82
11.3 Slug-to-Churn Transition 84
11.4 Churn-to-Annular Transition 84
Nomenclature 87
References 88

Chapter 2 A Critical Review of the Flooding Literature *S. George Bankoff and Sang Chun Lee* 95

1 Introduction 95
1.1 Description of Vertical Countercurrent Annular Flow 96
1.2 Characteristics of the Flooding Phenomenon 97
1.3 Associated Phenomena 99
1.4 Classification of Previous Flooding Studies 102
2 Fundamentals of Countercurrent Flow 102
2.1 Pressure Drop 103
2.1.1 Adiabatic Flow 103
2.1.2 Condensing Flow 106
2.2 Mean Film Thickness 107
2.2.1 Falling Film without Gas Flow 107
2.2.2 Liquid Film with Countercurrent Gas Flow 109
2.3 Interfacial Shear Stress 110
2.3.1 Adiabatic Flow 111
2.3.2 Condensing Flow 114
3 Classification of Flooding Models 115

4 Brief Review of Analytical Models 116
4.1 Stability Theory of a Traveling Wave 116
4.1.1 Potential Flow Model 116
4.1.2 Viscous Flow Model 126
4.1.3 Finite-Amplitude Wave Model 127
4.2 Envelope Theories 129
4.2.1 Separate Cylinders Model 129
4.2.2 Drift-Flux Model 130
4.2.3 Separated-Flow Models 130
4.3 Static Equilibrium Theories 133
4.3.1 Stationary Wave Model 133
4.3.2 Hanging Film Model 134
4.3.3 Roll Wave Model 135
4.4 Theory of Slug Formation 136
4.4.1 Kordyban and Ranov Model 136
4.4.2 Wallis and Dobson Model 138
4.4.3 Taitel and Dukler Model 139
4.4.4 Gardner Model 140
4.4.5 Mishima and Ishii Model 141
5 Experimental Investigations 142
5.1 Experimental System 142
5.2 Empirical Correlations 143
6 Comparisons and Discussion 150
6.1 Flooding without Phase Change 150
6.2 Flooding with Phase Change 161
7 Further Aspects of Vertical Countercurrent Flooding 168
7.1 Tube-End Conditions 168
7.2 Tube Length 169
7.3 Tube Diameter 169
7.4 Liquid Droplet Entrainment 170
8 Summary and Conclusions 171
Nomenclature 172
References 175

Chapter 3 A Comprehensive Examination of Heat Transfer Correlations Suitable for Reactor Safety Analysis *D. C. Groeneveld and C. W. Snoek* 181

1 Introduction 181
2 Single-Phase Heat Transfer 184
2.1 Introduction 184
2.2 Subcooled Water Heat Transfer 184
2.3 Superheated Steam Heat Transfer 184
2.4 Bundle Geometry 186
2.5 Entrance and Spacer Effects 186
3 Nucleate Boiling and Convective Evaporation 188
3.1 Introduction 188

3.2 Prediction Methods 189
3.2.1 Nucleate Boiling Only 189
3.2.2 Saturated Boiling: Nucleate Boiling and Forced Convective Evaporation 189
3.3 Conclusions and Final Remarks 194
4 Critical Heat Flux 195
4.1 Introduction 195
4.2 Correlations 195
4.3 Alternative Prediction Methods 202
4.3.1 Analytical Methods 202
4.3.2 Table Look-Up Technique 203
4.3.3 Graphical Techniques 210
4.4 Parametric Trends 210
4.4.1 General 210
4.4.2 Cross-Section Geometry 214
4.4.3 Effect of Rod-Spacing Devices 215
4.4.4 Effect of Heat Flux Distribution 216
4.4.5 Transient Effects 217
4.4.6 Other Effects 217
4.5 Final Remarks 218
5 Transition Boiling 218
5.1 Introduction 218
5.2 Data Trends 219
5.3 Correlations 219
5.4 Prediction of the Critical Heat Flux Temperature 225
5.5 Discussion 226
5.6 Final Remarks 226
6 Minimum Film Boiling 227
6.1 Introduction 227
6.2 Minimum Film Boiling Types 227
6.3 Prediction Methods 233
6.4 Correlation Assessments 234
6.4.1 Data Trends 234
6.4.2 Comparison with Data 235
6.4.3 Discussion 236
6.5 Final Remarks 237
7 Film Boiling 238
7.1 Introduction 238
7.2 Prediction Methods 238
7.2.1 Post-Dryout Models 238
7.2.2 Post-Dryout Correlations 239
7.3 Comparison with Experimental Data 250
7.3.1 Available Data 250
7.3.2 Comparison with Tube Data 250
7.3.3 Comparison with Rod Bundle Data 253
7.3.4 Miscellaneous 255
7.4 Final Remarks 255
8 Summary of Conclusions and Final Remarks 256
Acknowledgments 257

Nomenclature 257
References 260

Chapter 4 Reboilers *P. B. Whalley and G. F. Hewitt* 275

1 Introduction 275
2 Types of Reboilers 275
2.1 Internal Reboiler 275
2.2 Kettle Reboiler 277
2.3 Vertical Thermosyphon Reboiler 278
2.4 Horizontal Thermosyphon Reboiler 281
2.5 Selection of Type 283
3 Detailed Experimental Studies 285
3.1 Kettle Reboilers 285
3.2 Vertical Thermosyphon Reboilers 292
4 Problems in Design 295
4.1 Kettle and Internal Reboilers 296
4.2 Vertical Thermosyphon Reboilers 296
4.3 Horizontal Thermosyphon Reboilers 296
5 A Design Strategy 297
5.1 Simulation Calculation 297
5.2 Design Calculation 297
6 Two-Phase Pressure Drop 298
6.1 Components of Two-Phase Pressure Drop 298
6.2 Two-Phase Frictional Pressure Drop in Tubes 299
6.3 Void Fraction in Tubes 300
6.4 Two-Phase Frictional Pressure Drop in Cross Flow 301
6.5 Void Fraction in Cross Flow 302
6.6 Use of the Homogeneous Model of Two-Phase Flow 303
7 Boiling Heat Transfer Coefficients 305
7.1 Boiling Inside Tubes 305
7.2 Boiling in Cross Flow 310
8 Critical Heat Flux 312
8.1 Critical Heat Flux Inside Tubes 312
8.2 Critical Heat Flux in Cross Flow 315
9 Instability 318
10 Conclusions 322
Nomenclature 323
References 327

Chapter 5 Flow of Gas-Solid Mixtures through Standpipes and Valves *L. S. Leung and P. J. Jones* 333

1 Introduction 333

2 Flow Regimes 337
2.1 Fluidized and Nonfluidized Regimes 337
2.2 Kojabashian's Classification 341
2.2.1 Fluidized Flow 341
2.2.2 Nonfluidized Flow 343
2.2.3 Summary of Kojabashian's Classification 343
2.3 Classification of Leung and Jones in Fluidized Flow 343
2.4 Summary of the Classification of Flow Regimes 346
3 Demarcation between Flow Regimes 347
3.1 Demarcation between Fluidized and Nonfluidized Flow 347
3.2 Demarcation within the Fluidized Mode: Type I and Type II 350
3.3 Demarcation within the Nonfluidized Mode: TRANPACFLO and PACFLO 355
4 Equations Describing Each Flow Regime 355
4.1 Equations for PACFLO 355
4.2 Equations for TRANPACFLO 357
4.3 Equations for Type I Fluidized Flow 357
4.4 Equations for Type II Fluidized Flow 358
5 Coexistence of Flow Modes 359
5.1 Introduction 359
5.2 Coexistence of Flow Regimes at Constant Superficial Fluid Velocity 359
5.2.1 General Classification 359
5.2.2 Type I Lean-Phase Fluidized Flow Coexistence with PACFLO/TRANPACFLO 360
5.2.3 Type I Fluidized Flow (Lean-Phase) Coexistence with Type II Fluidized Flow (Dense-Phase) 362
5.2.4 Type I Dense-Phase Fluidized Flow Coexistence with PACFLO/TRANPACFLO 365
5.3 Coexistence of Flow Modes with Variation in the Superficial Velocity 366
5.3.1 General Classification 366
5.3.2 Coexistence of Flow Modes Caused by Gas Compression 366
5.3.3 Coexistence of Flow Modes Caused by Introduction of Aeration Gas 368
6 Effects of Gas Compression and Aeration 372
6.1 Gas Compression 372
6.2 Aeration 374
6.2.1 Aeration Required for Counteracting Gas Compression 374
6.2.2 Aeration in Excess of that Required for Counteracting Gas Compression 375
7 Flow of Gas-Solid Mixtures through an Orifice or a Valve 377
7.1 Introduction 377
7.2 Flow of a Fluidized Mixture through an Orifice 378
7.2.1 Solids 378
7.2.2 Gas 381

7.3 Nonfluidized Flow through an Orifice **382**
7.3.1 Nonfluidized Flow through an Orifice with No Fluid Drag Effects **384**
7.3.2 Nonfluidized Flow through an Orifice with Fluid Drag Effects **386**
7.4 Flow through *L* and *J* Valves **387**
7.5 Summary of Gas-Solid Flow through Valves **390**
8 Stability of Standpipe Flow **391**
8.1 Introduction **391**
8.2 Stability of Uniform Suspension Flow **392**
8.3 Flooding Instability **393**
8.4 Stability from Continuity (Kinematic) Wave Direction Consideration **394**
8.5 Ledinegg Supply-Demand Analysis of Flow Stability **396**
8.6 Multiple Steady-State and Bifurcation-Type Instability **400**
8.7 Oscillatory Steady State **400**
9 Analyses of Industrial Standpipe Systems **401**
9.1 Introduction **401**
9.2 System with Fixed P_1, P_3, and z **402**
9.2.1 One Fluidized Flow Mode Throughout **402**
9.2.2 One Nonfluidized Mode Throughout **404**
9.2.3 Multiple Steady States and Hysteresis **405**
9.2.4 Coexistence of Two Flow Modes **406**
9.3 System with Fixed P_1, P_3, and W_s **407**
9.3.1 Coexistence of Lean-Phase and Dense-Phase Fluidized Flow **408**
9.3.2 Coexistence of Lean-Phase Fluidized Flow with TRANPACFLO **410**
9.3.3 Summary of the Case Study for the Fig. 3 System **411**
9.4 Standpipe in Multiple Fluidized Beds **411**
9.5 System with Fixed P_1 and z and with P_3 Dependent on W_s **415**
9.6 Concluding Remarks **416**
Nomenclature **417**
References **419**

Chapter 6 Core-Annular Flow of Oil and Water through a Pipeline
R. V. A. Oliemans and G. Ooms **427**

1 Introduction **427**
2 Core Flow Characteristics and Literature Review **430**
2.1 Criteria for the Existence of Stable Core-Annular Flow **431**
2.1.1 Practical Observations **431**
2.1.2 Hydrodynamic Stability **431**
2.1.3 Velocity Range for Stable Core Flow **432**
2.2 Existing Theoretical Models and Correlation Methods **434**
2.2.1 Hold-up **434**
2.2.2 Pressure Loss for Stable Core Flow **436**

2.3 Pressure Loss during Restart of Core Flow from a Stratified Layer **443**
2.3.1 Introduction **443**
2.3.2 Completely Stratified Flow **443**
2.3.3 Partially Stratified Flow **444**
2.3.4 Comparison with Experimental Data **446**
3 A New Theoretical Model: The Lubricating-Film Model **447**
3.1 Model Description **448**
3.2 Qualitative Predictions **450**
3.2.1 Sensitivity Study **450**
3.2.2 Conclusions **454**
4 Experiments in 2- and 8-in Pipes **458**
5 Comparison between the Theoretical Model and Experiments **459**
6 Conclusions **467**
Nomenclature **469**
References **471**
Appendix 1 Basic Equations of the Lubricating-Film Model **472**
A1.1 Derivation of Basic Equations **472**
A1.2 Solution Procedure **474**

Index 477
