PREFACE	11
PRINCIPAL SYMBOLS	13
1. THE FUNDAMENTAL PARAMETERS AND PROPERTIES OF SEMI- CONDUCTORS USED IN PHOTOELECTRIC DEVICES	1
1.1. The Energy-band Model of a Semiconductor	1
1.1.1. The Energy Gap of Semiconductors	2
1.1.2. Thermal-equilibrium Carrier Density in Intrinsic Semiconductor	4
1.1.3. Impurity Levels in Semiconductors	5
1.2. Semiconductor Conductivity and Carrier Mobility	9
1.3. Drift and Diffusion Currents	13
1.4. Carrier Recombination, Lifetime, and Diffusion Length in Semicon- ductors	14
1.5. Surface Recombination	17
1.6. The Continuity Equation	18
1.7. The Optical Properties of Semiconductors	20
2. THE FUNDAMENTAL RELATIONS CONCERNING VISIBLE AND INFRARED RADIATION	22
2.1. The Visible and Infrared Range	22
2.2. Units Used in the Visible and Infrared Range	22
2.3. The Corpuscular Nature of Radiation	24
2.4. The Laws Relating to Black Bodies	25
2.4.1. The Planck Law	25
2.4.2. Wien's Law	27
2.4.3. The Stefan-Boltzmann Law	28
2.4.4. The Inverse Square Law	29
2.4.5. Lambert's Law	30
2.5. The Emissivity of Grey Bodies	30
3. SOURCES OF VISIBLE AND INFRARED RADIATION	33
3.1. Natural Sources	33
3.1.1. Solar Radiation	33

3.1.2. Background Radiation	33
3.2. Laboratory Sources	35
3.2.1. Globars and Nernst Filaments	35
3.2.2. Black body Models	36
3.2.3. Gaseous Discharge Sources	37
3.2.4. Solid-state and Gas Lasers	39
<b>4. SEMICONDUCTOR SOURCES OF INFRARED AND VISIBLE RADIATION</b>	<b>42</b>
4.1. The Physical Principles	42
4.1.1. Recombination Radiation in Semiconductors	42
4.1.2. The Dependence of the Recombination Radiation Spectrum on Current Density in a $p-n$ Junction	45
4.1.3. The Efficiency of the $p-n$ Junction as a Source of Recombination Radiation	48
4.1.4. Laser Action in a $p-n$ Junction	50
4.2. The Design and Technology of Semiconductor Sources of Infrared and Visible Radiation	53
4.2.1. The Technology of a Gallium Arsenide $p-n$ Junction	53
4.2.2. The Design and Technology of Electroluminescent Lamps	54
4.2.3. The Design and Technology of Gallium Arsenide Lasers	56
4.2.4. Other Semiconductor Lasers	58
<b>5. THE INTERACTION OF ELECTROMAGNETIC RADIATION WITH A SEMICONDUCTOR</b>	<b>60</b>
5.1. Types of Interaction	60
5.2. The Reflection of Radiation at a Semiconductor Surface	62
5.3. The Absorption of Radiation by a Semiconductor	64
5.3.1. The Absorption Coefficient	64
5.3.2. Intrinsic Absorption	65
5.3.3. Extrinsic Absorption	69
5.3.4. Absorption by Free Carriers	71
5.3.5. Exciton Absorption	73
5.3.6. Absorption by Lattice Vibrations	74
5.4. The Optical Generation of Free Carriers in a Semiconductor	75
5.4.1. The Quantum Yield and Energy Distribution of Radiation-generated Carriers	75
5.4.2. The Spatial Distribution of Radiation-generated Carriers	77
<b>6. THE THEORETICAL FOUNDATIONS OF THE DESIGN OF INTRINSIC SEMICONDUCTOR PHOTOCONDUCTORS</b>	<b>80</b>
6.1. Photoconductivity	80
6.2. The Current-Voltage Characteristics of a Photoconductor	81
6.3. Dependence of Sensitivity on Physical and Geometrical Parameters	83
6.3.1. Uniform Carrier Generation in a Semiconductor Wafer	83
6.3.2. Nonuniform Carrier Generation in a Semiconductor Wafer	84
6.3.3. Worked Examples	88
6.4. Factors Determining the Response Time of an Intrinsic Photoconductor	90
6.5. Design Conclusions	91

7.	THE CONSTRUCTION AND TECHNOLOGY OF SINGLE-CRYSTAL INTRINSIC PHOTOCONDUCTORS	93
7.1.	Germanium Photoconductors	93
7.2.	Silicon Photoconductors	94
7.3.	Indium Antimonide Photoconductors	94
7.4.	Indium Arsenide Photoconductors	96
8.	THE THEORETICAL FOUNDATIONS OF THE DESIGN OF PHOTOELECTROMAGNETIC INFRARED DETECTORS	97
8.1.	The Photoelectromagnetic Effect	97
8.2.	The Dependence of the Short-circuit Current on the Parameters of the Sensitive Element	100
8.3.	The Dependence of the Photoelectromagnetic Voltage on the Parameters of the Sensitive Element	102
8.4.	The Magnetoresistivity of the Sensitive Element	104
8.5.	The Dependence of the Photoelectromagnetic Detector Responsivity on the Parameters of the Sensitive Element	105
8.6.	Factors Determining the Noise Equivalent Power	106
8.7.	Factors Determining the Response Time	108
8.8.	Design Conclusions	108
9.	THE CONSTRUCTION AND TECHNOLOGY OF PHOTOELECTROMAGNETIC INFRARED DETECTORS	110
9.1.	The Technology of the Semiconductor Sensitive Element	110
9.1.1.	The Preparation of the Semiconductor Wafer Prior to Attachment of the Leads	110
9.1.2.	Attaching the Leads to the Wafer	111
9.1.3.	Chemical Treatment of the Wafer after Attachment of the Leads	112
9.2.	The Design of the Magnet for a Detector	113
9.3.	The Construction and Technology of the Housing of a Detector	116
10.	THE CONSTRUCTION AND TECHNOLOGY OF FAR-INFRARED DETECTORS BASED ON IMPURITY PHOTOCONDUCTORS	117
10.1.	The Theoretical Foundations of Impurity Photoconductor Design	117
10.1.1.	Utilizing Impurity Photoconductivity for Far-infrared Detection	117
10.1.2.	Factors Determining the Responsivity of an Impurity Photoconductor	118
10.1.3.	Noise in Photoconductors (a) Photon Noise — (b) Johnson-Nyquist Noise — (c) Generation-recombination Noise — (d) Modulation Noise — (e) Contact Noise	120
10.1.4.	Limitation of the Responsivity of Impurity Photoconductors by Temperature and Background Radiation	123
10.1.5.	The Influence of Additional Impurities on the Photoconductor Responsivity	127
10.1.6.	Factors Determining the Choice of a Semiconductor for Use as an Impurity Photoconductor	129
10.1.7.	Factors Determining the Choice of Impurity (a) The Ionization Energy of Impurity Levels — (b) The Operating Temperature of the Photoconductor — (c) Maximum Impurity Concentration — (d) Ease of Doping — (e) The Photoconductor Responsivity	129

10.2.	The Optimum Geometry and Dimensions of an Impurity Photoconductor and its Integrating Shield	134
10.2.1.	The Construction of Impurity Photoconductors with Integrating Shields	134
10.2.2.	The Construction of Impurity Photoconductors Utilizing Multiple Internal Reflection	136
10.3.	The Technology and Characteristics of Impurity Photoconductors	137
10.3.1.	Gold-doped Germanium Photoconductors (a) Doping Methods — (b) Wafer Technology — (c) Techniques for Making Contacts — (d) Characteristics	137
10.3.2.	Gold- and Antimony-doped Germanium Photoconductors	144
10.3.3.	Zinc-doped Germanium Photoconductors	147
10.3.4.	Zinc- and Antimony-doped Germanium Photoconductors	149
10.3.5.	Copper-doped Germanium Photoconductors	150
10.3.6.	Antimony-doped Germanium Photoconductors	151
10.3.7.	Photoconductors with Gold-doped and with Zinc- and Antimony-doped Germanium-Silicon Alloys	151
10.3.8.	Photoconductors with Gold-, Silver-, or Copper-doped Indium Antimonide	152
10.4.	The Construction and Technology of Housings for Impurity Photoconductors	154
10.4.1.	General Remarks	154
10.4.2.	Materials for Infrared Transparent Windows (a) Optical Properties — (b) Thermal Properties — (c) Mechanical Properties — (d) Chemical Properties	155
10.4.3.	Anti-reflection Films	159
10.4.4.	The Construction of Housings for Liquid-nitrogen-cooled Detectors	165
10.4.5.	The Construction of Housings for Liquid-helium-cooled Detectors	167
11.	THE THEORETICAL FOUNDATIONS OF PHOTODIODE DESIGN	169
11.1.	The Family of Current-voltage Characteristics	169
11.1.1.	Parallel-illuminated Junctions	169
11.1.2.	Perpendicular-illuminated Junctions	172
11.2.	The Dependence of the Current-Voltage Characteristics on the Geometry of the Junction	176
11.3.	The Dependence of the Current-Voltage Characteristics on the Semiconductor Parameters	183
11.4.	Examples of Photodiode Design for Obtaining Specific Current-Voltage Characteristics	187
11.5.	Factors Affecting the Spectral Response of a Photodiode	189
11.5.1.	The Physical Parameters of the Semiconductor	189
11.5.2.	The Geometry of the $p-n$ Junction	191
11.5.3.	Surface Recombination	194
12.	THE CONSTRUCTION AND TECHNOLOGY OF PHOTODIODES	197
12.1.	Germanium Photodiodes	197
12.1.1.	Alloy-junction Photodiodes	197
12.1.2.	Diffused-junction Photodiodes	199
12.1.3.	Grown-junction Photodiodes	200
12.1.4.	Chemical Treatment of Germanium $p-n$ Junctions Used in Photodiodes	201

12.2. Silicon Photodiodes	203
12.3. Indium Antimonide Photodiodes	204
12.4. Indium Arsenide Photodiodes	206
12.5. Gallium Arsenide Photodiodes	208
13. THE CONSTRUCTION AND TECHNOLOGY OF HIGH-FREQUENCY PHOTODIODES	209
13.1. Factors Affecting the Cut-off Frequency of Photodiodes	209
13.1.1. Carrier Separation Time	209
13.1.2. The Capacitance of the $p-n$ Junction	213
13.2. The Construction and Technology of Narrow-base Photodiodes	215
13.3. Diffused-junction Photodiodes	217
13.4. Photodiodes with Wide Potential Barriers	218
13.5. The Construction and Technology of $p-i-n$ Photodiodes	221
13.6. Heterojunction Photodiodes	224
14. THE CONSTRUCTION AND TECHNOLOGY OF SEMICONDUCTOR SOLAR ENERGY CONVERTERS	227
14.1. The Photovoltaic Effect in a $p-n$ Junction	227
14.2. The Factors Governing the Efficiency of a Photoelectric Cell	228
14.2.1. The Efficiency of Surface Penetration	228
14.2.2. The Absorption Efficiency	230
14.2.3. The Efficiency of Carrier Generation	231
14.2.4. The Current Efficiency	233
14.2.5. The Voltage Efficiency	233
14.3. The Choice of Semiconductor for a Solar Energy Converter	234
14.4. The Optimum Requirements of Photoelectric Cells for Use Outside the Earth's Atmosphere	239
14.5. The Influence of the $p-n$ Junction Parameters on the EMF of a Photoelectric Cell	242
14.6. The Influence of the Construction and Technology of the Photoelectric Cell on Its Series Resistance	245
14.7. The Technology of Photoelectric Cells	249
14.7.1. Silicon Cells	249
14.7.2. Gallium Arsenide Cells	253
14.7.3. Cadmium Sulphide Cells	257
15. FURTHER CONCEPTS CONCERNING THE CONSTRUCTION OF PHOTOELECTRIC SOLAR ENERGY CONVERTERS	259
15.1. Multilayer Cells Containing Several Semiconductors with Different Energy Gaps	259
15.2. Cells Which Make Use of the Trapping Levels in the Semiconductor	261
16. THE CONSTRUCTION AND TECHNOLOGY OF SEMICONDUCTOR MODULATORS FOR INFRARED RADIATION	263
16.1. The Dependence of the Radiation Modulation Depth on the $p-n$ Junction Parameters	263
16.1.1. A General Expression for the Modulation Depth	264
16.1.2. The Dependence of the Modulation Depth on the Junction Current Density	266
16.1.3. Nonuniformity of the Modulation Depth in the $p-n$ Junction	267

16.2.	Calculation of the Optical Length of the Modulator	269
16.3.	The Spectral Response of a Modulator	270
16.4.	The Cut-off Frequency of a Modulator	272
16.5.	The Construction and Technology of Germanium Modulators	272
17.	THE THEORY OF THE PHOTOTRANSISTOR	275
17.1.	The Dependence of the Phototransistor Sensitivity on the Method of Illumination and Biasing	275
17.2.	The Family of Current-Voltage Characteristics	278
17.3.	The Dependence of the Sensitivity of Alloy Phototransistors on their Parameters	284
18.	THE CONSTRUCTION AND TECHNOLOGY OF PHOTOTRANSISTORS	287
18.1.	The Grown-junction Phototransistor	287
18.2.	The Alloy-junction Phototransistor	289
18.3.	The Alloy-diffused Phototransistor	290
18.4.	The Diffused-junction Phototransistor	292
19.	THE CONSTRUCTION AND TECHNOLOGY OF $p-n-p-n$ PHOTOELECTRIC SWITCHES	293
19.1.	The Current-Voltage Characteristics of the $p-n-p-n$ Switch	293
19.2.	The Fabrication of $p-n-p-n$ Structures in Silicon by the Double Diffusion and Alloying Method	298
19.3.	The Fabrication of $p-n-p-n$ Structures in Silicon by the Triple Diffusion Method	302
20.	THE CONSTRUCTION AND TECHNOLOGY OF THE HOUSINGS FOR PHOTOCONDUCTORS, PHOTODIODES, PHOTOTRANSISTORS, AND PHOTOELECTRIC SWITCHES	303
20.1.	All-glass Housings	303
20.2.	Glass-and-metal Housings	307
